#### Abstract

The four dimensional objects have been already introduced in [2],the standard tesseract in Euclidean 4-space is given as the convex hull of the points $( \pm 1, \pm 1, \pm 1 \pm 1)$.That is it consists of the points $\left\{\left(x_{1}, x_{2}, x_{3}, x_{4}\right) \in R^{4},-1 \leq x_{i} \leq 1\right\}$. The vertex cover polynomial of a graph $G$ of order $n$ was introduced in [3] it is defined as the polynomial $C(G, x)=\sum_{i=\beta(G)}^{|v(G)|} c(G, i) x^{i}$, where $c(G, i)$ is the number of vertex covering sets of $G$ of size $i$, and $\beta(G)$ is the covering number of $G$. In this paper we formed a magic 4-dimensional cube and we find the vertex cover polynomial related to the vertices and faces.

Keywords: Four dimension, Vertex Covering Set, Vertex Covering Number, Vertex Cover Polynomial.

## INTRODUCTION 1

A generalization of the cube to dimension greater than three, is a 'hypercube'. The tesseract is the four dimensional hypercube or 4-cube. A tesseract is bounded by eight hyper planes ( $x_{i}= \pm 1$ ). Each pair of non parallel hyper plane intersects to form 24 square faces in a tesseract. Three cubes and three squares intersect at each edge. There are four cubes, six squares, and four edges meeting at every vertex. Over all it consists of 8 cubes, 24 squares, 32 edges, and 16 vertices. Let $G=(V, E)$ be a simple graph. For any vertex $v \in V$, the open neighborhood of $v$ is the set $\mathrm{N}(v)=\{u \in \mathrm{~V} / u v \in \mathrm{E}\}$ and the closed neighborhood of v is the set $\mathrm{N}[v]=\mathrm{N}(v) \cup\{v\}$,the open neighborhood of S is $\mathrm{N}(\mathrm{S})=\mathrm{N}(v)$ and the closed neighborhood of S is $\mathrm{N}[\mathrm{S}]=\mathrm{N}(\mathrm{S}) \cup \mathrm{S}$. A set $\mathrm{S} \subseteq \mathrm{V}$ is a vertex covering of G if every edge $u v \in E$ is adjacent to atleast one vertex in $S$. The vertex covering number $\beta(\mathrm{G})$ is the minimum cardinality of the vertex covering sets in $G$.A vertex covering set with cardinality $\beta(G)$ is called a $\beta$-set. Let $C(G, i)$ be the family of vertex covering sets of $G$ with cardinality $i$ and let $c(G, i)=|C(G, i)|$. The polynomial, $C(G, x)=\sum_{i=\beta(G)}^{|v(G)|} c(G, i) x^{i}$ is defined as the vertex cover polynomial of G. In earlier, many properties of the vertex cover polynomials have been studied.

Definition: 2.1 A tesseract is four dimensional cube in principle obtained by combining two cubes, that is two copies of similar cubes in which the corresponding vertices are connected by edges.

Definition: 2.2 A graph $G(V, E)$ is said to be bipartite the vertex set $V$ can be partitioned into two sets $V_{1}$ and $V_{2}$, such that every edges of $G$ is adjacent with one end in $V_{1}$ and other end in $V_{2}$.

Definition: 2.3 A set $\mathrm{I} \subseteq \mathrm{V}$ is called an independent set if no two elements of I are adjacent in G .
Definition: 2.4 Let $C(G, i)$ be the family of vertex covering sets of $G$ with cardinality i and let $c(G, i)=|C(G, i)|$. The vertex cover polynomial of G is defined as $\mathrm{C}(\mathrm{G}, x)=\sum_{\mathrm{i}=\beta(\mathrm{G})}^{|\mathrm{v}(\mathrm{G})|} \mathrm{C}(\mathrm{G}, \mathrm{i}) x^{\mathrm{i}}$.
Definition: 2.5 A set $\mathrm{S} \subseteq \mathrm{V}$ is said to be a covering of G if every edge of G is incident with at least one element in S .
Definition: 2.6 A set $\mathrm{S} \subseteq \mathrm{V}$ is an independent set of G , then $\mathrm{V}-\mathrm{S}$ is a covering of G .

Formation of 4 dimensional cube:

Threedimension
(Figure: 4)
(Two copies of a square is connected by lines to form a cube)

## Four dimension

(Figure: 5)
Two parallel cubes have to be connected to become a hyper cube.
(Two copies of the cube and the corresponding vertices are connected bylines of same leng hi).

A tesseract (hypercube) in principle is obtained by combining two cubes, and the scheme is similar to the construction of a cube from two squares, and two copies of the lower dimensional cube are connected to the corresponding vertices. Each edge of a tesseract is of same length. Tesseract is a bipartite graph. The bipartite graph of the above tesseract based on its vertices is represented in figure 6.

Figure: 6

Let $\mathrm{S}_{1}=\left\{v_{1}, v_{2}, v_{3}, v_{4}, v_{5}, v_{6}, v_{7}, v_{8}\right\}$ and $\mathrm{S}_{2}=\left\{v_{9}, v_{10}, v_{11}, v_{12}, v_{13}, v_{14}, v_{15}, v_{16}\right\}$ be the vertices of $G$.

## Covering polynomial of the tresseract, based on its vertices $S_{1}$ and $S_{2}$

## Covering sets with cardinality 8 are:

$$
\begin{aligned}
& \mathrm{C}(\mathrm{G}, 8)=\left\{\mathbf{S}_{1}, \mathbf{S}_{2}\right\} \\
& \text { Therefore, } \mathrm{c}(\mathrm{G}, 8)=2 .
\end{aligned}
$$

## Covering sets with cardinality 9 are

```
    C(G,9) ={{S S \cup{v } } / v
```

It can be selected in $2 \times 8 \mathrm{C}_{1}$ ways
Therefore, $c(G, 9)=16$.

## Covering sets with Cardinality 10 are

$\mathrm{C}(\mathrm{G}, 10)=\left\{\left\{\mathrm{S}_{1} \cup\left\{v_{\mathrm{i}}, v_{\mathrm{j}}\right\} / v_{\mathrm{i},}, v_{\mathrm{j}} \in \mathrm{S}_{2}\right\} ;\left\{\mathrm{S}_{2} \cup\left\{v_{\mathrm{i}}, v_{\mathrm{j}}\right\} / v_{\mathrm{i}}, v_{\mathrm{j}} \in \mathrm{S}_{1}\right\}\right\}$
It can be selected in $2 \times 8 \mathrm{C}_{2}$ ways.
Therefore, $c(G, 10)=2 \times 8 C_{2}$.

## Covering sets with Cardinality 11 are

```
\(\mathrm{C}(\mathrm{G}, 11)=\left\{\left\{\mathrm{S}_{1} \cup\left\{v_{\mathrm{i}}, v_{\mathrm{j}}, v_{\mathrm{k}}\right\} /\left\{v_{\mathrm{i}}, v_{\mathrm{j}}, v_{\mathrm{k}}\right\} \in \mathrm{S}_{2}\right\} ;\left\{\mathrm{S}_{2} \cup\left\{v_{\mathrm{i}}, v_{\mathrm{j}}, v_{\mathrm{k}}\right\} /\left\{v_{\mathrm{i}}, v_{\mathrm{j}}, v_{\mathrm{k}}\right\} \in \mathrm{S}_{1}\right\} ;\right.\)
    \(\left.\left\{\mathrm{S}_{1}-\left\{v_{\mathrm{i}}\right\} \cup \mathrm{N}\left(v_{\mathrm{i}}\right) / v_{\mathrm{i}} \in \mathrm{S}_{1}\right\},\left\{\mathrm{S}_{2}-\left\{v_{\mathrm{i}}\right\} \cup \mathrm{N}\left(v_{\mathrm{i}}\right) / v_{\mathrm{i}} \in \mathrm{S}_{2}\right\}\right\}\)
    Therefore, \(\mathrm{c}(\mathrm{G}, 11)=2\left(8 \mathrm{C}_{3}+8 \mathrm{C}_{1}\right)\)
```

## Covering sets with Cardinality12 are

$$
\begin{aligned}
\mathrm{C}(\mathrm{G}, 12)= & \left\{\left\{\mathrm{S}_{1} \cup\left\{v_{\mathrm{i}}, v_{\mathrm{j}}, v_{\mathrm{k}}, v_{l}\right\} /\left\{v_{\mathrm{i}}, v_{\mathrm{j}}, v_{\mathrm{k}}, v_{l}\right\} \in \mathrm{S}_{2}\right\} ;\left\{\mathrm{S}_{2} \cup\left\{v_{\mathrm{i}}, v_{\mathrm{j}}, v_{\mathrm{k}}, v_{l}\right\} /\left\{v_{\mathrm{i}} v_{\mathrm{j}} v_{\mathrm{k}} v_{l}\right\} \in \mathrm{S}_{1}\right\} ;\right. \\
& \left\{\mathrm{S}_{1}-\{\cup \mathrm{N},\right. \\
& \left.\left\{\mathrm{S}_{1}-\left\{v_{\mathrm{i}}, v_{\mathrm{j}}\right\} \cup \mathrm{i}\right) \cup\left\{v_{\mathrm{j}}\right\} /\left\{v_{\mathrm{i}}\right\} \in \mathrm{S}_{1},\left\{v_{\mathrm{i}}\right\} \in \mathrm{v}_{2}\right\} /\left(\mathrm{S}_{\mathrm{i}}, v_{\mathrm{j}}\right) \text { are not an opposite diagonal vertices of hypercube, } \\
& \left.\left.\left(v_{\mathrm{i}}, v_{j}\right) \neq\left(v_{1}, v_{8}\right),\left(v_{2}, v_{7}\right)\left(v_{3}, v_{5}\right)\left(v_{4}, v_{6}\right) \text { and } \mathrm{N}\left(v_{\mathrm{i}}, v_{\mathrm{j}}\right)=\mathrm{S}_{2}\right\}\right\} .
\end{aligned}
$$

Therefore, $\mathrm{c}(\mathrm{G}, 12)=2 \times 8 \mathrm{C}_{4}+2 \times 8 \mathrm{C}_{1} \times 4 \mathrm{C}_{1}+24$.

Covering sets with cardinality13 are same as the independent sets with cardinality 3.
$\mathrm{I}(\mathrm{G}, 3)=\left\{\left\{\left\{v_{\mathrm{i}}, v_{\mathrm{j}}, v_{\mathrm{k}}\right\} /\left\{v_{\mathrm{i}}, v_{\mathrm{j}}, v_{\mathrm{k}}\right\} \in \mathrm{S}_{1}\right\} ;\left\{v_{\mathrm{i}}, v_{\mathrm{j}}, v_{\mathrm{k}}\right\} /\left\{v_{\mathrm{i}}, v_{\mathrm{j}}, v_{\mathrm{k}}\right\} \in \mathrm{S}_{2}\right\} ;$

$$
\left\{\left\{v_{\mathrm{i}}, v_{\mathrm{j}}\right\} \cup\left\{v_{\mathrm{k}}\right\} /\left\{v_{\mathrm{i}}, v_{\mathrm{j}}\right\} \in \mathrm{S}_{1},\left\{v_{\mathrm{k}}\right\} \in \mathrm{S}_{2} \text { and } v_{\mathrm{k}} \notin \mathrm{~N}\left(v_{\mathrm{i}}, v_{\mathrm{j}}\right)\right\} \text {, }
$$

$$
\left.\left\{\left\{v_{\mathrm{i}}, v_{\mathrm{j}}\right\} \cup\left\{v_{\mathrm{k}}\right\} /\left\{v_{\mathrm{i}}, v_{\mathrm{j}}\right\} \in \mathrm{S}_{2} ;\left\{v_{\mathrm{k}}\right\} \in \mathrm{S}_{1} \text { and } v_{\mathrm{k}} \notin \mathrm{~N}\left(v_{\mathrm{i}}, v_{\mathrm{j}}\right)\right\}\right\} .
$$

Therefore $\mathrm{c}(\mathrm{G}, 13)=2 \times\left[8 \mathrm{C}_{3}+24 \times 2 \mathrm{C}_{1}\right]$

Covering sets with cardinality 14 is same as the independent sets with cardinality 2 are $\mathrm{I}(\mathrm{G}, 2)=\left\{\left\{\left\{v_{\mathrm{i}}, v_{\mathrm{j}}\right\} /\left\{v_{\mathrm{i}}, v_{\mathrm{j}}\right\} \in \mathrm{S}_{1}\right\} ;\left\{\left\{v_{\mathrm{i}}, v_{\mathrm{j}}\right\} /\left\{v_{\mathrm{i}}, v_{\mathrm{j}}\right\} \in \mathrm{S}_{2}\right\} ;\left\{\left\{v_{\mathrm{i}}\right\} \cup\left\{v_{\mathrm{j}}\right\} / v_{\mathrm{i}} \in \mathrm{S}_{1}\right.\right.$ and $\left.\left.v_{\mathrm{j}} \notin \mathrm{N}\left(v_{\mathrm{i}}\right) \in \mathrm{S}_{2}\right\}\right\}$ Therefore, $|\mathrm{I}(\mathrm{G}, 2)|=\mathrm{c}(\mathrm{G}, 14)=2\left[8 \mathrm{C}_{2}+4 \times 4 \mathrm{C}_{1}\right]$

Covering sets with cardinality 15 and 16 are: $c(G, 15)=16$ and $c(G, 16)=1$

## Therefore, vertex cover polynomial is

$$
\begin{aligned}
& \mathbf{C}(\mathbf{G}, \boldsymbol{x})=2 x^{8}+8 \mathrm{C}_{1} x^{9}+8 \mathrm{C}_{2} x^{10}+\left(8 \mathrm{C}_{3}+8 \mathrm{C}_{1}\right) x^{11}+\left(8 \mathrm{C}_{4}+8 \mathrm{C}_{1} \times 4+12\right) x^{12} \\
&+\left(8 \mathrm{C}_{3}+8 \mathrm{C}_{1} \times 3\right) x^{13}+\left(8 \mathrm{C}_{2}+4 \times 4 \mathrm{C}_{1}\right) x^{14}+\left(8 x^{15}\right]+x^{16} \\
&=2 x^{8}+16 x^{9}+56 x^{10}+128 x^{11}+228 x^{12}+208 x^{13}+88 x^{14}+16 x^{15}+x^{16} .
\end{aligned}
$$

Lemma: 2.7 The coefficient of the vertex cover polynomial $x^{-8}[\mathrm{C}(\mathrm{G}, x)]$ is log- concave.
Proof: Clearly $\mathrm{a}_{\mathrm{i}}^{2} \geq \mathrm{a}_{\mathrm{i}-\mathrm{-}} . \mathrm{a}_{\mathrm{i}+1}, \forall \mathrm{i}=1,2, \ldots ., .9$.
Therefore, $x^{-8}[\mathrm{C}(\mathrm{G}, x)]$ is log -concave.

## Magic Tesseract:

Now our aim is to form a tesseract, in such a way that facial sums of all cubes are equal.

Let the vertices of the two 3-dimensional cubes to be denoted by ABCDEFGH and IJKLMNOP respectively. From figure: 5 , the 24 faces of the tesseract are denoted by the vertices $v_{1}, v_{2}, v_{3}, \ldots v_{24}$ as follows:

| ABCD $-v_{1}$ | DELM $-v_{9}$ | ABGH $-v_{17}$ |
| :--- | :--- | :--- |
| CDKL $-v_{2}$ | CFNK $-v_{10}$ | AHIP $-v_{18}$ |
| ADIL $-v_{3}$ | KLMN $-v_{11}$ | BGJO $-v_{19}$ |
| ABIJ $-v_{4}$ | EFGH $-v_{12}$ | IJOP $-v_{20}$ |
| BCJK $-v_{5}$ | GHOP $-v_{13}$ | BCFG $-v_{21}$ |
| IJKL $-v_{6}$ | EHMP $-v_{14}$ | JKNO $-v_{2}$ |
| CDEF $-v_{7}$ | FGNO $-v_{15}$ | ADEH $-v_{23}$ |
| EFMN $-v_{8}$ | MNOP $-v_{16}$ | ILMP $-v_{24}$ |

By our given notation, the faces of eight cubes and the corresponding vertices are as follows:

| 1 | ube 2 | Cube 3 | Cube 4 | Cube 5 | Cube 6 | Cube 7 | Cube 8 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| ABCD | CDEF- $v_{7}$ | $v_{12}$ | AB | BCFG- $v_{21}$ | ADEH $V_{23}$ | ABCD $v_{1}$ | IJKL $v_{6}$ |
| - $V_{2}$ | EFMN- $v_{8}$ | GHOP- $v_{13}$ | ABIJ - $\mathrm{v}_{4}$ | CFKN- $v_{10}$ | ADIL- $v_{3}$ | CDEF- $v_{7}$ | KLMN- $v_{11}$ |
| ADIL- $v_{3}$ | DELM- $v_{9}$ | EH MP- $v_{14}$ | AHIP - ${ }^{\text {d }}$ | BCJK - $v_{5}$ | DELM- $v_{9}$ | EFGH-v | MNOP-v $v_{16}$ |
| ADIJ- $V_{4}$ | CDKL- $v_{2}$ | EFMN- $v_{8}$ | GHOP- $v_{1}$ | BGJO - $\mathrm{V}_{19}$ | EHMP- $\mathrm{v}_{14}$ | ABGH- $v_{17}$ | IJOP - $v_{20}$ |
| BCJK- $v_{5}$ | CFKN- $v_{10}$ | FGNO- $v_{15}$ | BGJO- $v_{19}$ | FGNO- $v_{15}$ | AHIP - $v_{18}$ | BCFG- $v_{21}$ | JKNO- $v_{22}$ |
| IJKL- $v_{6}$ | KLMN- $v_{11}$ | MNOP- $v_{16}$ | IJOP - $V_{20}$ | JKNO- $v_{22}$ | ILMP - $V_{24}$ | ADEH- | ILMP |

Table: 1
Three mutually perpendicular set of four surfaces of each cube is denoted as the following:

Cube 2

Crube 85

Figure: 7
In cube 1 , the three mutually perpendicular four surfaces are (i) $v_{1}, v_{6}, v_{2}, v_{4}$ (ii) $v_{1}, v_{6}, v_{3}, v_{5}$ (iii) $v_{5}, v_{3}, v_{2}, v_{4}$. In similar each cube consists of three mutually perpendicular set of four surfaces is given in figure: 7 .

In our tesseract, the common faces of newly formed six cubes other than the basic two cubes are shown below:

Figure: 8
Now we choose 24 even values from 2 to 48 to fill on the faces of the tesseract such that the sum of the facial values of each cubes are equal to 150 .

| Cubes |  |  |  |  |  |  |  |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| 1 | 24 | 22 | 26 | 28 | 42 | 8 | 150 |
| 2 | 24 | 30 | 6 | 38 | 32 | 20 | 150 |
| 3 | 36 | 30 | 16 | 40 | 10 | 18 | 150 |
| 4 | 12 | 46 | 26 | 14 | 34 | 18 | 150 |
| 5 | 4 | 48 | 16 | 28 | 34 | 20 | 150 |
| 6 | 36 | 22 | 44 | 14 | 32 | 2 | 150 |
| 7 | 12 | 48 | 6 | 40 | 42 | 2 | 150 |
| 8 | 4 | 46 | 44 | 38 | 10 | 8 | 150 |

Table: 2
The faces of newly formed six cubes are filled by the values given in table: 2 is represented In figure: 9 as below:

Figure: 9
Each cube and its six facial values are shown as below in figure: 10

Figure: 10

Now the faces of the tesseract ate consider as the vertices and its adjacency is represented in figure: 11 is shown below:

Figure: 11
The vertex cover polynomial based on its faces considered as vertices.
Now the vertices of $G$ can be partitioned into three sets $S_{1}, S_{2}$ and $S_{3}$ as given below:

Let
$\mathrm{S}_{1}=\left\{v_{1}, v_{6}, v_{9}, v_{10}, v_{18}, v_{19}, v_{12}, v_{16}\right\}$
$\mathrm{S}_{2}=\left\{v_{21}, v_{22}, v_{2}, v_{4}, v_{8}, v_{13}, v_{23}, v_{24}\right\}$.
$\mathrm{S}_{3}=\left\{v_{7}, v_{11}, v_{3}, v_{5}, v_{14}, v_{15}, v_{17}, v_{20}\right\}$
I. Covering set with cardinality 24 is
$`\left\{\mathrm{~S}_{1} \cup \mathrm{~S}_{2} \cup \mathrm{~S}_{3}\right\}$; Therefore, $\mathrm{c}(\mathrm{G}, 24)=1$
II. Covering sets with cardinality $\mathbf{2 3}$ are
$\left\{\left\{\mathrm{S}_{1} \cup \mathrm{~S}_{2} \cup \mathrm{~S}_{3}\right\}-\left\{v_{\mathrm{i}}\right\} /\right.$ for every clement $\left.v_{\mathrm{i}} \in \mathrm{S}_{1} \cup \mathrm{~S}_{2} \cup \mathrm{~S}_{3}\right\}$
Therefore, $c(G, 23)=24$
III. Covering sets with cardinality $\mathbf{2 2}$ of $\mathbf{G}$ is same as the Independent sets with cardinality $\mathbf{2}$ are
(i) Select $\left\{\left\{v_{\mathrm{i}}, \mathrm{v}_{\mathrm{j}}\right\} /\left\{v_{i}, v_{\mathrm{j}}\right\} \in \mathrm{S}_{1}\right\}$. it can be selected in $8 \mathrm{C}_{2}$ ways.
(ii) For the fixed element $v_{\mathrm{i}} \in \mathrm{S}_{1}$ and $v_{\mathrm{j}} \in \mathrm{S}_{2},\left\{\left\{v_{\mathrm{i}}\right\} \cup\left\{v_{\mathrm{j}}\right\} / \operatorname{deg}\left(v_{\mathrm{i}}\right)=4\right.$; $\left.v_{\mathrm{j}} \in \mathrm{S}_{2}\right\}$, It can be selected in $4 \times 6 \mathrm{C}_{1}$ ways
(iii) $\left\{\left\{v_{\mathrm{i}}\right\} \cup\left\{v_{\mathrm{j}}\right\} / \operatorname{deg}\left(v_{\mathrm{j}}\right)=8 ; v_{\mathrm{j}} \in \mathrm{S}_{2}\right\}$, It can be selected in $4 \times 4 \mathrm{C}_{2}$ ways.

For all three categories,
$\mathrm{c}(\mathrm{G}, 22)=3\left[8 \mathrm{C}_{2}+4 \times 6 \mathrm{C}_{1}+4 \times 4 \mathrm{C}_{2}\right]$

## IV. Covering sets with cardinality $\mathbf{2 1}$ of $\mathbf{G}$ is same as the independent sets with cardinality $\mathbf{3}$ are as follows

(i) Select all three elements from the same set $\left\{\left\{v_{\mathrm{i}} v_{\mathrm{j}}, v_{\mathrm{k}}\right\} /\left\{v_{\mathrm{i}}, v_{\mathrm{j}}, v_{\mathrm{k}}\right\} \in \mathrm{S}_{1}\right\}$

It can be selected in $8 C_{3}$ ways and for all the three sets $3 \times 8 C_{3}$ ways.
(ii) Selection of two vertices from one set and one element from any one among the remaining sets. Select two elements from $\mathrm{S}_{1}$ and one element from $\mathrm{S}_{2}$ :
$\left\{\left\{v_{\mathrm{i}}, v_{\mathrm{j}}\right\} \cup\left\{v_{\mathrm{k}}\right\} /\left\{v_{\mathrm{i},}, v_{\mathrm{j}}\right\} \in \mathrm{S}_{1},\left\{v_{\mathrm{k}}\right\} \in \mathrm{S}_{2}\right.$ and $\left.\mathrm{d}\left(v_{\mathrm{i}}\right)=\mathrm{d}\left(v_{\mathrm{j}}\right)=4 \& \mathrm{~N}\left(v_{\mathrm{j}}\right)=\mathrm{N}\left(v_{\mathrm{k}}\right)\right\}$ it can be selected in $2 \times 6 \mathrm{C}_{1}$ ways Select one element from $\mathrm{S}_{1}$ and two elements from $\mathrm{S}_{2}$ :

$$
\left\{\left\{v_{\mathrm{i}}\right\} \cup\left\{v_{\mathrm{j}}, v_{\mathrm{k}}\right\} /\left\{v_{\mathrm{i}}\right\} \in \mathrm{S}_{1},\left\{v_{\mathrm{j}}, v_{\mathrm{k}}\right\} \in \mathrm{S}_{2} \text { and } \mathrm{d}\left(v_{\mathrm{i}}\right)=\mathrm{d}\left(v_{\mathrm{k}}\right)=4 \& \mathrm{~N}\left(v_{\mathrm{j}}\right) \neq \mathrm{N}\left(v_{\mathrm{k}}\right)\right\}
$$

it can be selected in $4 \times 4 \mathrm{C}_{1}$ ways

$$
\begin{aligned}
& \left\{\left\{v_{\mathrm{i}}\right\} \cup\left\{v_{\mathrm{j}}, v_{\mathrm{k}}\right\} /\left\{v_{\mathrm{i}}\right\} \in \mathrm{S}_{1},\left\{v_{\mathrm{j}}, v_{\mathrm{k}}\right\} \in \mathrm{S}_{2} ; \mathrm{d}\left(v_{\mathrm{i}}\right)=4, \mathrm{~d}\left(v_{\mathrm{k}}\right)=8\right\} \\
& \left\{\left\{v_{\mathrm{i}}\right\} \cup\left\{v_{\mathrm{j}}, v_{\mathrm{k}}\right\} /\left\{v_{\mathrm{i}}\right\} \in \mathrm{S}_{1},\left\{v_{\mathrm{j}}, v_{\mathrm{k}}\right\} \in \mathrm{S}_{2} ; \mathrm{d}\left(v_{\mathrm{j}}\right)=4 \text { and } \mathrm{d}\left(v_{\mathrm{k}}\right)=8\right\}
\end{aligned}
$$

it can be selected in $4 \times 4 \times 3 \mathrm{C}_{1}$ ways

$$
\left\{\left\{v_{\mathrm{i}}\right\} \cup\left\{v_{\mathrm{j}}, v_{\mathrm{k}}\right\} /\left\{v_{\mathrm{i}}\right\} \in \mathrm{S}_{1},\left\{v_{\mathrm{j}}, v_{\mathrm{k}}\right\} \in \mathrm{S}_{2}, \mathrm{~d}\left(v_{\mathrm{i}}\right)=\mathrm{d}\left(v_{\mathrm{k}}\right)=8\right\}
$$

it can be selected in $4 \times 2 \mathrm{C}_{1}$ ways
All six sets have total number of choices

$$
=6\left[\overline{2 \times 6 \mathrm{C}_{1}}+\overline{4 \times 4 \mathrm{C}_{1}}+\overline{4 \times 4 \times 3 \mathrm{C}_{1}}+\overline{4 \times 2 \mathrm{C}_{1}}\right]
$$

(iii) Selection of one element from each set

$$
\left\{\left\{v_{\mathrm{i}}\right\} \cup\left\{v_{\mathrm{j}}\right\} \cup\left\{v_{\mathrm{k}}\right\} /\left\{v_{\mathrm{i}}\right\} \in \mathrm{S}_{1},\left\{v_{\mathrm{j}}\right\} \in \mathrm{S}_{2},\left\{v_{\mathrm{k}}\right\} \in \mathrm{S}_{3}, \mathrm{~d}\left(v_{\mathrm{i}}\right)=\mathrm{d}\left(v_{\mathrm{j}}\right)=\mathrm{d}\left(v_{\mathrm{k}}\right)=4\right\}
$$

it can be selected in $16 \times 5 \mathrm{C}_{1}$ ways

$$
\left\{\left\{v_{\mathrm{i}}\right\} \cup\left\{v_{\mathrm{j}}\right\} \cup\left\{v_{\mathrm{k}}\right\} /\left\{v_{\mathrm{i}}\right\} \in \mathrm{S}_{1},\left\{v_{\mathrm{j}}\right\} \in \mathrm{S}_{2},\left\{v_{\mathrm{k}}\right\} \in \mathrm{S}_{3}, \mathrm{~d}\left(v_{\mathrm{i}}\right)=\mathrm{d}\left(v_{\mathrm{j}}\right)=4 \text { and } \mathrm{d}\left(v_{\mathrm{k}}\right)=8\right\}
$$

it can be selected in $16 \times 2 \mathrm{C}_{1}$ ways

$$
\left\{\left\{v_{\mathrm{i}}\right\} \cup\left\{v_{\mathrm{j}}\right\} \cup\left\{v_{\mathrm{k}}\right\} /\left\{v_{\mathrm{i}}\right\} \in \mathrm{S}_{1},\left\{v_{\mathrm{j}}\right\} \in \mathrm{S}_{2},\left\{v_{\mathrm{k}}\right\} \in \mathrm{S}_{3}, \mathrm{~d}\left(v_{\mathrm{i}}\right\}=\mathrm{d}\left(v_{\mathrm{j}}\right)=\mathrm{d}\left(v_{\mathrm{k}}\right)=8\right\}
$$

it can be selected in $8 \times 1 \mathrm{C}_{1}$ ways
Total number of choices to select one element from each set is

$$
\left[\overline{16 \times 5 C_{1}}+\overline{16 \times 2 C_{1}}+\overline{18 \times 1 C_{1}}\right]
$$

Therefore,

$$
\begin{gathered}
c(G, 20)=3 \times 8 C_{3}+6\left[\overline{2 \times 6 \mathrm{C}_{1}}+\overline{4 \times 4 \mathrm{C}_{1}}+\overline{4 \times 4 \times 3 \mathrm{C}_{1}}+\overline{4 \times 2 \mathrm{C}_{1}}\right] \\
+\left[\overline{16 \times 5 \mathrm{C}_{1}}+\overline{16 \times 2 \mathrm{C}_{1}}+\overline{18 \times 1 \mathrm{C}_{1}}\right]
\end{gathered}
$$

## IV. Covering sets with cardinality $\mathbf{2 0}$ is same as the independent sets with cardinality $\mathbf{4}$

(i) Selection of four elements from any one among three sets
$\left\{\left\{v_{\mathrm{i}}, v_{\mathrm{j}}, v_{\mathrm{k}}\right\} /\left\{v_{\mathrm{i}}, v_{\mathrm{j}}, v_{\mathrm{k}}\right\} \in \mathrm{S}_{1}\right\}$
It can be selected in $8 C_{4}$ ways. For all the three sets it can be selected in $3 \times 8 C_{4}$ ways.
(ii) Selection of three elements from any one of the set and one element from any one among other two. Now the different ways to select one from $\mathrm{S}_{1}$ and three from $\mathrm{S}_{2}$.
$\left\{\left\{v_{\mathrm{i}}\right\} \cup\left\{v_{\mathrm{j}}, v_{\mathrm{k}}, v_{l}\right\} /\left\{v_{\mathrm{i}}\right\} \in \mathrm{S}_{1},\left\{v_{\mathrm{j}}, v_{\mathrm{k}}, v_{l}\right\} \in \mathrm{S}_{2}, \mathrm{~d}\left(v_{\mathrm{j}}\right)=\mathrm{d}\left(v_{\mathrm{k}}\right)=\mathrm{d}\left(v_{\mathrm{k}}\right)=4, v_{\mathrm{i}} \notin \mathrm{N}\left(v_{\mathrm{i}}, v_{\mathrm{j}}, v_{\mathrm{k}}\right\}\right\}$
it can be selected in $4 \times 4 \mathrm{C}_{1}$ ways.
$\left\{\left\{v_{\mathrm{i}}\right\} \cup\left\{v_{\mathrm{j}}, v_{\mathrm{k}}, v_{l}\right\} /\left\{v_{\mathrm{i}}\right\} \in \mathrm{S}_{1},\left\{v_{\mathrm{j}}, v_{\mathrm{k}}, v_{l}\right\} \in \mathrm{S}_{2}, \mathrm{~d}\left(v_{\mathrm{j}}\right)=\mathrm{d}\left(v_{\mathrm{k}}\right)=4 ; \mathrm{d}\left(v_{l}\right)=8 ; \mathrm{N}\left(v_{\mathrm{z}}\right)=\mathrm{N}\left(v_{\mathrm{k}}\right)\right\}$
it can be selected in $8 \times 3 \mathrm{C}_{1}$ ways.
$\left\{\left\{v_{\mathrm{i}}\right\} \cup\left\{v_{\mathrm{j}}, v_{\mathrm{k}}, v_{l}\right\} /\left\{v_{\mathrm{i}}\right\} \in \mathrm{S}_{1},\left\{v_{\mathrm{j}}, v_{\mathrm{k}}, v_{l}\right\} \in \mathrm{S}_{2}, \mathrm{~d}\left(v_{\mathrm{j}}\right)=\mathrm{d}\left(v_{\mathrm{k}}\right)=4 ; \mathrm{d}\left(v_{l}\right)=8 ; \mathrm{N}\left(v_{\mathrm{j}}\right) \neq \mathrm{N}\left(v_{\mathrm{k}}\right)\right\}$
it can be selected in $4 \times 4 \times 2 \mathrm{C}_{1}$ ways.
$\left\{\left\{v_{\mathrm{i}}\right\} \cup\left\{v_{\mathrm{j}}, v_{\mathrm{k}}, v_{l}\right\} / \mathrm{d}\left\{v_{\mathrm{j}}\right\}=4 ; \mathrm{d}\left(v_{\mathrm{k}}\right)=\mathrm{d}\left(v_{l}\right)=8, v_{\mathrm{i}} \notin \mathrm{N}\left\{v_{\mathrm{j}}, v_{\mathrm{k}}, v_{l}\right\} \in \mathrm{S}_{1}\right\}$
it can be selected in $4 \times 2 \mathrm{C}_{1}$ ways
$\left\{\left\{v_{\mathrm{i}}\right\} \cup\left\{v_{\mathrm{j}}, v_{\mathrm{k}}, v_{l}\right\} / \mathrm{d}\left(v_{\mathrm{j}}\right)=4 ; \mathrm{d}\left(v_{\mathrm{k}}\right)=\mathrm{d}\left(v_{l}\right)=8\right.$
$v_{\mathrm{i}} \notin \mathrm{N}\left\{v_{\mathrm{j}}, v_{\mathrm{k}}, v_{l}\right\} \in \mathrm{S}_{1}$ and $\left.\mathrm{N}\left(v_{\mathrm{j}}\right)=\mathrm{N}\left(v_{\mathrm{j}}\right)=\mathrm{N}\left(v_{\mathrm{k}}\right)=\mathrm{S}_{1}-\left\{v_{\mathrm{i}}\right\}\right\}$
it can be selected in $4 \times 1$ ways. for all the six sets the total number of choices
$6\left[\overline{4 \times 4 \mathrm{C}_{1}}+\overline{8 \times 3 \mathrm{C}_{1}}+\overline{4 \times 4 \times 2 \mathrm{C}_{1}}+\overline{4 \times 2 \mathrm{C}_{1}}+\overline{4 \times 1}\right]$
(iii) Among the three sets, select two sets, and take two elements from each
$\left\{\left\{v_{\mathrm{i}}, v_{\mathrm{j}}\right\} \cup\left\{v_{\mathrm{k}}, v_{l}\right\} /\left\{v_{\mathrm{i}}, v_{\mathrm{j}}\right\} \in \mathrm{S}_{1} ;\left\{v_{\mathrm{k}}, v_{l}\right\} \in \mathrm{S}_{2}, \mathrm{~d}\left(v_{\mathrm{k}}\right)=\mathrm{d}\left(v_{l}\right)=4\right.$ and $\left.\mathrm{N}\left(v_{\mathrm{k}}\right)=\mathrm{N}\left(v_{l}\right)\right\}$
it can be selected in $2 \times 6 \mathrm{C}_{2}$ ways.
$\left\{\left\{v_{\mathrm{i}}, v_{\mathrm{j}}\right\} \cup\left\{v_{\mathrm{k}}, v_{l}\right\} /\left\{v_{\mathrm{i}}, v_{\mathrm{j}}\right\} \in \mathrm{S}_{1} ;\left\{v_{\mathrm{k}}, v_{l}\right\} \in \mathrm{S}_{2}, \mathrm{~d}\left(v_{\mathrm{k}}\right)=\mathrm{d}\left(v_{l}\right)=4\right.$ and $\left.\mathrm{N}\left(v_{\mathrm{k}}\right) \neq \mathrm{N}\left(v_{l}\right)\right\}$
it can be selected in $4 \times 4 \mathrm{C}_{2}$ ways.
$\left\{\left\{v_{\mathrm{i}}, v_{\mathrm{j}}\right\} \cup\left\{v_{\mathrm{k}}, v_{l}\right\} /\left\{v_{\mathrm{i}}, v_{\mathrm{j}}\right\} \in \mathrm{S}_{1} ;\left\{v_{\mathrm{k}}, v_{l}\right\} \in \mathrm{S}_{2}, \mathrm{~d}\left(v_{\mathrm{k}}\right)=4\right.$ and $\mathrm{d}\left(v_{l}\right)=$
it can be selected in $4 \times 4 \times 3 \mathrm{C}_{2}$ ways.
$\left\{\left\{v_{\mathrm{i}}, v_{\mathrm{j}}\right\} \cup\left\{v_{\mathrm{k}}, v_{l}\right\} /\left\{v_{\mathrm{i}}, v_{\mathrm{j}}\right\} \in \mathrm{S}_{1} ;\left\{v_{\mathrm{k}}, v_{l}\right\} \in \mathrm{S}_{2}, \mathrm{~d}\left(v_{\mathrm{k}}\right)=\mathrm{d}\left(v_{l}\right)=8\right\}$
it can be selected in $4 \times 1$ ways.
Total choices for the above category are
$\left[\overline{2 \times 6 \mathrm{C}_{2}}+\overline{4 \times 4 \mathrm{C}_{2}}+\overline{4 \times 4 \times 3 \mathrm{C}_{2}}+\overline{4 \times 1}\right]$
for all the three sets, $3\left(\overline{2 \times 6 \mathrm{C}_{2}}+\overline{4 \times 4 \mathrm{C}_{2}}+\overline{4 \times 4 \times 3 \mathrm{C}_{2}}+\overline{4 \times 1}\right)$
(iv) Selection of 2 elements from one set and exactly one from the remaining two
$\left\{\left\{v_{\mathrm{i}}\right\} \cup\left\{v_{\mathrm{j}}, v_{\mathrm{k}}\right\} \cup\left\{v_{\mathrm{l}}\right\} /\left\{v_{\mathrm{i}} \in \mathrm{S}_{1} ;\left\{v_{\mathrm{j}}, v_{\mathrm{k}}\right\} \in \mathrm{S}_{2} ;\left\{v_{\mathrm{k}}\right\} \in \mathrm{S}_{3}, \mathrm{~d}\left(v_{\mathrm{i}}\right)=\mathrm{d}\left(v_{\mathrm{j}}\right)=\mathrm{d}\left(v_{\mathrm{k}}\right)=4 \& \mathrm{~N}\left(v_{\mathrm{j}}\right)=\mathrm{N}\left(v_{\mathrm{k}}\right)\right\}\right.$
it can be selected in $8 \times 5 \mathrm{C}_{1}$ ways.
$\left\{\left\{v_{\mathrm{i}}\right\} \cup\left\{v_{\mathrm{j}}, v_{\mathrm{k}}\right\} \cup\left\{v_{\mathrm{l}}\right\} /\left\{v_{\mathrm{i}} \in \mathrm{S}_{1} ;\left\{v_{\mathrm{j}}, v_{\mathrm{k}}\right\} \in \mathrm{S}_{2} ;\left\{v_{\mathrm{k}}\right\} \in \mathrm{S}_{3}, \mathrm{~d}\left(v_{\mathrm{i}}\right)=\mathrm{d}\left(v_{\mathrm{j}}\right)=\mathrm{d}\left(v_{\mathrm{k}}\right)=4 \& \mathrm{~N}\left(v_{\mathrm{j}}\right) \neq \mathrm{N}\left(v_{\mathrm{k}}\right)\right\}\right.$
it can be selected in $16 \times 4 \mathrm{C}_{1}$ ways.
$\left\{\left\{v_{\mathrm{i}}\right\} \cup\left\{v_{\mathrm{j}}, v_{\mathrm{k}}\right\} \cup\left\{v_{l}\right\} /\left\{v_{\mathrm{i}}\right\} \in \mathrm{S}_{1} ;\left\{v_{\mathrm{j}}, v_{\mathrm{k}}\right\} \in \mathrm{S}_{2} ;\left\{v_{\mathrm{k}}\right\} \in \mathrm{S}_{3}\right.$, any one of $v_{\mathrm{i}}$ or $v_{\mathrm{j}}$ or $v_{\mathrm{k}}$ is of degree 8$\}$
it can be selected in $4 \times 10 \times 2 \mathrm{C}_{1}$ ways.
Therefore, all the three sets the total number of choices in the above category is
$3\left[8 \times 5 \mathrm{C}_{1}+16 \times 4 \mathrm{C}_{1}+\overline{4 \times 10 \times 2 \mathrm{C}_{1}}\right]$
Therefore, $\mathrm{c}(\mathrm{G}, 20)=\overline{3 \times 8 \mathrm{C}_{4}}+6\left[\left(4 \times 4 \mathrm{C}_{1}\right)+\left(8 \times 3 \mathrm{C}_{1}\right)+\left(4 \times 4 \times 2 \mathrm{C}_{1}\right)+\left(4 \times 2 \mathrm{C}_{1}\right)+(4 \times 1)\right]$
$+3\left[\overline{2 \times 6 \mathrm{C}_{2}}+\overline{4 \times 4 \mathrm{C}_{2}}+\overline{4 \times 4 \times 3 \mathrm{C}_{2}}+\overline{4 \times 1}\right]$
$+3\left[8 \times 5 \mathrm{C}_{1}+16 \times 4 \mathrm{C}_{1}+\overline{4 \times 10 \times 2 \mathrm{C}_{1}}\right]$.
V) Covering sets with cardinality 19 is same as the independent sets with cardinality 5.
(i) Selection of five independent elements from any one of the set $\left\{\mathrm{S}_{\mathrm{i}}-\left\{v_{\mathrm{j}}, v_{\mathrm{k}}, v_{\mathrm{l}}\right\} / \mathrm{i}=1,2,3\right\}$ and it can be selected in $3 \times 8 C_{5}$ ways.
(ii) Selection of 4 elements from one set and one element from any one of the remaining two sets
$\left\{\left\{v_{\mathrm{i}}\right\} \cup\left\{v_{\mathrm{j}}, v_{\mathrm{k}}, v_{l}, v_{\mathrm{m}}\right\} /\left\{v_{\mathrm{i}} \in \mathrm{S}_{1} ;\left\{v_{\mathrm{j}}, v_{\mathrm{k}}, v_{\mathrm{m}}\right\} \in \mathrm{S}_{2} ; \mathrm{d}\left(v_{\mathrm{i}}\right)=4 ;\left\{v_{\mathrm{j}}, v_{\mathrm{k}}, v_{l}, v_{\mathrm{m}}\right\} \notin \mathrm{N}\left(v_{\mathrm{i}}\right)\right\}\right.$
it can be selected in $4 \times 6 \mathrm{C}_{4}$ ways.
For an six different choices $6 \times 4 \times 6 \mathrm{C}_{4}$ ways.
$\left\{\left\{v_{\mathrm{i}}\right\} \cup\left\{v_{\mathrm{j}}, v_{\mathrm{k}}, v_{l}, v_{\mathrm{m}}\right\} /\left\{v_{\mathrm{i}}\right\} \in \mathrm{S}_{1} ;\left\{v_{\mathrm{j}}, v_{\mathrm{k}}, v_{l}, v_{\mathrm{m}}\right\} \in \mathrm{S}_{2}, \mathrm{~d}\left(v_{\mathrm{i}}\right)=8 ;\left\{v_{\mathrm{j}}, v_{\mathrm{k}}, v_{l}, v_{\mathrm{m}}\right\} \notin \mathrm{N}\left(v_{\mathrm{i}}\right)\right\}$
it can be choose $4 \times 4 \mathrm{C}_{0}$ ways
For all six sets it can be selected in $6 \times 4 \times 4 \mathrm{C}_{0}$ ways.
(iii) Selection 3 elements from one set and 2 elements from any one among the other two sets for a fixed set $S_{1}$ and $\mathrm{S}_{2}$.
$\left\{\left\{v_{\mathrm{i}}, v_{\mathrm{j}}\right\} \cup\left\{v_{\mathrm{k}}, v_{l}, v_{\mathrm{s}}\right\} /\left\{v_{\mathrm{i}}, v_{\mathrm{j}}\right\} \in \mathrm{S}_{1} ;\left\{v_{\mathrm{k}}, v_{l}, v_{\mathrm{s}}\right\} \in \mathrm{S}_{2}, \mathrm{~d}\left(v_{\mathrm{i}}\right)=\mathrm{d}\left(v_{\mathrm{j}}\right)=4 \& \mathrm{~N}\left(v_{\mathrm{i}}\right)=\mathrm{N}\left(v_{\mathrm{j}}\right)\right\}$
it can be selected in $2 \times 6 \mathrm{C}_{3}$ ways
$\left\{\left\{v_{\mathrm{i},}, v_{\mathrm{j}}\right\} \cup\left\{v_{\mathrm{k}}, v_{l}, v_{\mathrm{s}}\right\} /\left\{v_{\mathrm{i}}, v_{\mathrm{j}}\right\} \in \mathrm{S}_{1} ;\left\{v_{\mathrm{k}}, v_{\mathrm{l}}, v_{\mathrm{s}}\right\} \in \mathrm{S}_{2 ;} \mathrm{d}\left(v_{\mathrm{i}}\right)=\mathrm{d}\left(v_{\mathrm{j}}\right)=4 \& \mathrm{~N}\left(v_{\mathrm{i}}\right) \neq \mathrm{N}\left(v_{\mathrm{j}}\right)\right\}$
it can be selected in $4 \times 4 \mathrm{C}_{3}$ ways.
$\left\{\left\{v_{\mathrm{i}}, v_{\mathrm{j}}\right\} \cup\left\{v_{\mathrm{k}}, v_{l}, v_{\mathrm{s}}\right\} /\left\{v_{\mathrm{i}}, v_{\mathrm{j}}\right\} \in \mathrm{S}_{1} ;\left\{v_{\mathrm{k}}, v_{l}, v_{\mathrm{s}}\right\} \in \mathrm{S}_{2}, \mathrm{~d}\left(v_{\mathrm{i}}\right)=4\right.$ and $\left.\mathrm{d}\left(v_{\mathrm{j}}\right)=8\right\}$
it can be selected in $4 \times 4$ ways
For all sets $\mathrm{S}_{1}, \mathrm{~S}_{2} \& \mathrm{~S}_{3}$, The number of choices for the above category
$6\left[\overline{2 \times 6 \mathrm{C}_{3}}+\overline{4 \times 4 \mathrm{C}_{3}}+\overline{4 \times 4}\right]$
(vi) Selection of three elements from one set and each one element from the remaining two set
$\left\{\left\{v_{\mathrm{i}}\right\} \cup\left\{v_{\mathrm{j}}, v_{\mathrm{k}}, v_{l}\right\} \cup\left\{v_{\mathrm{s}}\right\} /\left\{v_{\mathrm{i}}\right\} \in \mathrm{S}_{1} ;\left\{v_{\mathrm{j}}, v_{\mathrm{k}}, v_{l}\right\} \in \mathrm{S}_{2} ;\left\{v_{\mathrm{s}}\right\} \in \mathrm{S}_{3}\right.$
$\left.\mathrm{d}\left(v_{\mathrm{i}}\right)=\mathrm{d}\left(v_{\mathrm{j}}\right)=\mathrm{d}\left(v_{\mathrm{k}}\right)=\mathrm{d}\left(v_{l}\right)=\mathrm{d}\left(v_{\mathrm{s}}\right)=4\right\}$
it can be selected in $4 \times 4 \times 4 \mathrm{C}_{1}$ ways.
For a fixed set $\mathrm{S}_{1}$,
$\left\{\left\{v_{\mathrm{i}}\right\} \cup\left\{v_{\mathrm{j}}, v_{\mathrm{k}}, v_{l}\right\} \cup\left\{v_{\mathrm{s}}\right\} / v_{\mathrm{i}} \in \mathrm{S}_{1} ;\left\{v_{\mathrm{j}}, v_{\mathrm{k}}, v_{l}\right\} \in \mathrm{S}_{2} ; v_{\mathrm{s}} \in \mathrm{S}_{3}\right.$
$\left.\mathrm{d}\left(v_{\mathrm{i}}\right)=\mathrm{d}\left(v_{\mathrm{j}}\right)=\mathrm{d}\left(v_{\mathrm{k}}\right)=4 ; \mathrm{d}\left(v_{l}\right)=8 \& v_{l} \notin \mathrm{~N}\left(v_{\mathrm{i}}\right)\right\}$.
it can be selected in $4 \times 4 \times 2 \mathrm{C}_{1}$ ways
Total number of set in the above category for all three sets
$3\left[\overline{4 \times 4 \times 4 \mathrm{C}_{1}}+\overline{4 \times 4 \times 2 \mathrm{C}_{1}}\right]$ ways
(v) Each two elements from any two sets and one element from the remaining set for a fixed set $S_{2}$

Let $\left\{\mathrm{v}_{\mathrm{k}}\right\} \in \mathrm{S}_{2}$.

$$
\begin{gathered}
\left\{\left\{v_{\mathrm{i}}, v_{\mathrm{j}}\right\} \cup\left\{v_{\mathrm{k}},\right\} \cup\left\{v_{\mathrm{s}}, v_{\mathrm{t}}\right\}\right\}=4 \times 5 \mathrm{C}_{2} \text { sets if } \mathrm{N}\left(v_{\mathrm{i}}\right)=\mathrm{N}\left(v_{\mathrm{j}}\right) / \mathrm{d}\left(v_{\mathrm{i}}\right)=\mathrm{d}\left(v_{\mathrm{j}}\right)=\mathrm{d}\left(v_{\mathrm{k}}\right)=4 \\
4 \times 4 \mathrm{C}_{2} \text { sets if } \mathrm{N}\left(v_{\mathrm{i}}\right) \neq \mathrm{N}\left(v_{\mathrm{j}}\right) / \mathrm{d}\left(v_{\mathrm{i}}\right)=\mathrm{d}\left(v_{\mathrm{j}}\right)=\mathrm{d}\left(v_{\mathrm{k}}\right)=4 \\
4 \times 4 \text { sets if } \mathrm{d}\left(v_{\mathrm{i}}\right)=4 \mathrm{~d}\left(v_{\mathrm{j}}\right)=4 ; \mathrm{d}\left(v_{\mathrm{j}}\right)=8 ; \mathrm{d}\left(v_{\mathrm{k}}\right)=4 \text { and } \mathrm{N}\left(v_{\mathrm{j}}\right) \neq \mathrm{N}\left(v_{\mathrm{k}}\right) \\
2 \times 2 \text { sets if } \mathrm{d}\left(v_{\mathrm{i}}\right)=4 \mathrm{~d}\left(v_{\mathrm{j}}\right)=4 ; \mathrm{d}\left(v_{\mathrm{k}}\right)=8 \text { and } \mathrm{N}\left(v_{\mathrm{i}}\right)=\mathrm{N}\left(v_{\mathrm{j}}\right) \\
\text { Therefore, all sets } \mathrm{S}_{1}, \mathrm{~S}_{2} \& \mathrm{~S}_{3}, \text { total number of different sets are }
\end{gathered}
$$

$3\left[\overline{4 \times 5 \mathrm{C}_{2}}+\overline{4 \times 4 \mathrm{C}_{2}}+\overline{4 \times 4}+\overline{4 \times 1}\right]$
Therefore,

$$
\begin{gathered}
c(G, 20)=\overline{3 \times 8 C_{5}}+\overline{6 \times 4 \times 6 \mathrm{C}_{4}}+\overline{6 \times 4 \times 1} \\
+6\left[\overline{2 \times 6 \mathrm{C}_{3}}+\overline{4 \times 4 \mathrm{C}_{3}}+\overline{4 \times 4}\right]+3\left[\overline{4 \times 4 \times 4 \mathrm{C}_{1}}+\overline{4 \times 4 \times 2 \mathrm{C}_{1}}\right] \\
\quad+3\left[\overline{4 \times 5 \mathrm{C}_{2}}+\overline{4 \times 4 \mathrm{C}_{2}}+\overline{4 \times 4}+\overline{4 \times 1}\right]
\end{gathered}
$$

## VI. Covering sets with cardinality 18 is same as the independent sets with cardinality 6.

(i) Selection of six elements from any one of the sets
$\left\{\mathrm{S}_{\mathrm{i}}-\left\{v_{\mathrm{i}}, v_{\mathrm{j}}\right\} /\left\{v_{\mathrm{i}}, v_{\mathrm{j}}\right\} \in \mathrm{S}_{\mathrm{i}} / \mathrm{i}=1,2,3\right\}$
it can be selected in $3 \times 6 \mathrm{C}_{2}$ ways
(ii) Selection of five elements from one set and the remaining one element from any one of the other two sets
$\left\{\left\{v_{\mathrm{j}}\right\} \cup\left\{\right.\right.$ any five elements from six elements of $\left.\left.\mathrm{S}_{\mathrm{j}}-\mathrm{N}\left(v_{\mathrm{i}}\right)\right\} / \mathrm{N}\left(v_{\mathrm{i}}\right) \in \mathrm{S}_{\mathrm{i}} \& \operatorname{deg}\left(v_{\mathrm{i}}\right)=4\right\}$
For a fixed set $\mathrm{S}_{\mathrm{j}}$ four elements which satisfies the above condition.
Therefore, the total number of sets are $6 \times 4 \times 6 \mathrm{C}_{5}$.
(iii) Selection of four elements from one set and each one element from the remaining two sets
$\left\{\left\{v_{\mathrm{i}}\right\} \cup\left\{v_{\mathrm{k}}\right\} \cup\left\{\right.\right.$ any four elements from 5 elements of $\left.\mathrm{S}_{3}-\mathrm{N}\left(v_{\mathrm{i}}, v_{\mathrm{j}}\right)\right\} / v_{\mathrm{i}} \in \mathrm{S}_{1}, v_{\mathrm{j}} \in \mathrm{S}_{2}$,
$\mathrm{d}\left(v_{\mathrm{i}}\right)=\mathrm{d}\left(v_{\mathrm{j}}\right)=4$ and $\left.\left|\mathrm{N}\left(v_{\mathrm{i}}\right) \cap \mathrm{N}\left(v_{\mathrm{j}}\right)\right|=1\right\}$
it can be selected in $4 \times 4 \times 5 \mathrm{C}_{4}$ ways.
All the sets the total choices are $3 \times 4 \times 4 \times 5 \mathrm{C}_{4}$ ways
(iv) Selection of 4 elements from one set and 2 elements from any one among the other two sets
$\left\{\left\{v_{\mathrm{i}}, v_{\mathrm{j}}\right\} \cup\right.$ any four elements from 6 element of $\mathrm{S}_{2}-\mathrm{N}\left(v_{\mathrm{i}}, v_{\mathrm{j}}\right) /\left\{v_{\mathrm{i}} v_{\mathrm{j}}\right\} \in \mathrm{S}_{1}$,
$\mathrm{d}\left(v_{\mathrm{i}}\right)=\mathrm{d}\left(v_{\mathrm{j}}\right)=4$ and $\left.\mid \mathrm{N}\left(v_{\mathrm{i}}\right)=\mathrm{N}\left(v_{\mathrm{j}}\right)\right\}$
it can be selected in $2 \times 6 \mathrm{C}_{2}$ ways.
$\left\{\left\{v_{\mathrm{i}}, v_{\mathrm{j}}\right\} \cup\right.$ all four elements of $\mathrm{S}_{2}-\mathrm{N}\left(v_{\mathrm{i}}, v_{\mathrm{j}}\right) /\left\{v_{\mathrm{i}} v_{\mathrm{j}}\right\} \in \mathrm{S}_{1}$,
$\mathrm{d}\left(v_{\mathrm{i}}\right)=\mathrm{d}\left(v_{\mathrm{j}}\right)=4$ and $\left.\mid \mathrm{N}\left(v_{\mathrm{i}}\right) \neq \mathrm{N}\left(v_{\mathrm{j}}\right)\right\}$
it can be selected in $4 \times 4 \mathrm{C}_{4}$ ways.
All the six sets which satisfy the above category are $6\left[\overline{2 \times 6 C_{2}}+\overline{4 \times 1}\right]$
(v) Selection of each 3 elements from any two sets for a fixed set $\mathrm{S}_{1}$
$\left\{\left\{v_{\mathrm{i},}, v_{\mathrm{j}}, v_{\mathrm{k}}\right\} \cup\left\{\mathrm{S}_{2}-\mathrm{N}\left\{v_{\mathrm{i},}, v_{\mathrm{j}}, v_{\mathrm{k}}\right\} /\left\{v_{\mathrm{i},}, v_{\mathrm{j}}, v_{\mathrm{k}}\right\} \in \mathrm{S}_{1}, \mathrm{~d}\left(v_{\mathrm{i}}\right)=\mathrm{d}\left(v_{\mathrm{j}}\right)=\mathrm{d}\left(v_{\mathrm{k}}\right)=4\right\}\right.$
it can be selected in $4 \times 4 \mathrm{C}_{3}$ ways.
$\left\{\left\{v_{\mathrm{i},}, v_{\mathrm{j}}, v_{\mathrm{k}}\right\} \cup\left\{\mathrm{S}_{2}-\mathrm{N}\left(v_{\mathrm{i}}, v_{\mathrm{j}}, v_{\mathrm{k}}\right) /\left\{v_{\mathrm{i}}, v_{\mathrm{j}}, v_{\mathrm{k}}\right\} \in \mathrm{S}_{1}\right.\right.$; any one of the vertices of $v_{\mathrm{i},}, v_{\mathrm{j}}, v_{\mathrm{k}}$ is of degree eight and other two vertices of degree 4$\}$
it can be selected in 8 ways.

Therefore, total sets which satisfy the above conditions are $3\left[\overline{4 \times 4 \mathrm{C}_{3}}+8\right]$ ways.
(vi) Independent sets with selection of any one set containing three elements another one set containing two elements and one element from the remaining set.
$\left\{\left\{v_{\mathrm{i}}, v_{\mathrm{j}}\right\} \cup\left\{v_{\mathrm{k}}\right\} \cup\{\right.$ any three elements from the five elements of
$\mathrm{S}_{3}-\mathrm{N}\left(v_{\mathrm{i}}, v_{\mathrm{j}}\right) \cup\left\{v_{\mathrm{k}}\right\} /\left\{v_{\mathrm{i}}, v_{\mathrm{j}}\right\} \in \mathrm{S}_{1 ;} ;\left\{v_{\mathrm{k}}\right\} \in \mathrm{S}_{2}, \mathrm{~d}\left(v_{\mathrm{i}}\right)=\mathrm{d}\left(v_{\mathrm{j}}\right)=\mathrm{d}\left(v_{\mathrm{k}}\right)=4$ and $\left.\mathrm{N}\left(v_{\mathrm{i}}\right)=\mathrm{N}\left(v_{\mathrm{j}}\right)\right\}$
it can be selected in $4 \times 5 \mathrm{C}_{3}$ ways
$\left\{\left\{v_{\mathrm{i}}, v_{\mathrm{j}}\right\} \cup\left\{v_{\mathrm{k}}\right\} \cup\{\right.$ any three elements from four elements of
$\left.\mathrm{S}_{3}-\mathrm{N}\left(v_{\mathrm{i}}, v_{\mathrm{j}}\right) \cup \mathrm{N}\left(v_{\mathrm{k}}\right) /\left\{v_{\mathrm{i}}, v_{\mathrm{j}}\right\} \in \mathrm{S}_{1 ;} ; v_{\mathrm{k}}\right\} \in \mathrm{S}_{2}, \mathrm{~d}\left(v_{\mathrm{i}}\right)=\mathrm{d}\left(v_{\mathrm{j}}\right)=\mathrm{d}\left(v_{\mathrm{k}}\right)=4$ and $\left.\mathrm{N}\left(v_{\mathrm{i}}\right) \neq \mathrm{N}\left(v_{\mathrm{j}}\right)\right\}$
it can be selected in $4 \times 4 \mathrm{C}_{3}$ ways.
Total number of sets which satisfy the above condition is $6\left[\overline{4 \times 5 \mathrm{C}_{3}}+\overline{4 \times 4 \mathrm{C}_{3}}\right]$
(vii)Selection of exactly two elements from each set
$\left\{\left\{v_{\mathrm{i}}, v_{\mathrm{j}}\right\} \cup\left\{v_{\mathrm{k}}, v_{l}\right\} \cup\left\{v_{\mathrm{s}}, v_{\mathrm{t}}\right\} / \mathrm{d}\left(v_{\mathrm{i}}\right)=\mathrm{d}\left(v_{\mathrm{j}}\right)=\mathrm{d}\left(v_{\mathrm{k}}\right)=\mathrm{d}\left(v_{l}\right)=4\right.$
$\left\{v_{i}, v_{\mathrm{j}}\right\} \in \mathrm{S}_{1} ;\left\{v_{\mathrm{k}}, v_{l}\right\} \in \mathrm{S}_{2} ;\left\{v_{\mathrm{s}}, v_{\mathrm{t}}\right\} \in \mathrm{S}_{3}$ and $\left.\mathrm{N}\left(v_{\mathrm{i}}\right)=\mathrm{N}\left(v_{\mathrm{j}}\right)\right\}$
it can be selected in $4 \times 5 \mathrm{C}_{2}$ ways
$\left\{\left\{v_{\mathrm{i}}, v_{\mathrm{j}}\right\} \cup\left\{v_{\mathrm{k}}, v_{l}\right\} \cup\left\{v_{\mathrm{s}}, v_{\mathrm{t}}\right\} / \mathrm{d}\left(v_{\mathrm{i}}\right)=\mathrm{d}\left(v_{\mathrm{j}}\right)=\mathrm{d}\left(v_{\mathrm{k}}\right)=\mathrm{d}\left(v_{l}\right)=4\right.$
$\left\{v_{\mathrm{i}}, v_{\mathrm{j}}\right\} \in \mathrm{S}_{1} ;\left\{v_{\mathrm{k}}, v_{l}\right\} \in \mathrm{S}_{2} ;\left\{v_{\mathrm{s}}, v_{\mathrm{t}}\right\} \in \mathrm{S}_{3}$ and $\left.\mathrm{N}\left(v_{\mathrm{i}}\right) \neq \mathrm{N}\left(v_{\mathrm{j}}\right)\right\}$
it can be selected in $\left(4 \mathrm{C}_{2} \times 4 \mathrm{C}_{2}-4\right) \times 4 \mathrm{C}_{2}$ ways.
$\left\{\left\{v_{\mathrm{i}}, v_{\mathrm{j}}\right\} \cup\left\{v_{\mathrm{k}}, v_{l}\right\} \cup\left\{v_{\mathrm{s}}, v_{\mathrm{t}}\right\} / \mathrm{d}\left(v_{\mathrm{i}}\right)=\mathrm{d}\left(v_{\mathrm{j}}\right)=\mathrm{d}\left(v_{\mathrm{k}}\right)=4, \mathrm{~d}\left(v_{l}\right)=8\right.$
$\left.\mathrm{N}\left(v_{\mathrm{i}}\right) \neq \mathrm{N}\left(v_{\mathrm{j}}\right) ;\left\{v_{\mathrm{k}}, v_{l}\right\} \notin \mathrm{N}\left(v_{\mathrm{i}}, v_{\mathrm{j}}\right)\right\}$
(viii) it can be selected in $4 \times 4 \times 2$ ways.

Therefore, the total number of sets for the above category $\left[\overline{4 \times 5 \mathrm{C}_{2}}+\overline{32 \times 4 \mathrm{C}_{2}}+\overline{16 \times 2}\right]$
Therefore,

$$
\begin{aligned}
c(G, 18) & =\overline{3 \times 6 C_{2}}+\overline{6 \times 4 \times 6 C_{5}}+\left(3 \times 4 \times 4 \times 5 \mathrm{C}_{4}\right)+6\left[\overline{2 \times 6 \mathrm{C}_{2}}+\overline{4 \times 1}\right] \\
& +3\left[\overline{4 \times 4 \mathrm{C}_{3}}+8\right]+6\left[4 \times 5 \mathrm{C}_{3}+4 \times 4 \mathrm{C}_{3}\right]+\left[\overline{4 \times 5 \mathrm{C}_{2}}+\overline{32 \times 4 \mathrm{C}_{2}}+\overline{16 \times 2}\right] .
\end{aligned}
$$

## VI) Covering sets with cardinality $\mathbf{1 7}$ is same as an independent sets with cardinality 7.

(i) Selection of seven independent elements from any one of the set is as follows
$\left\{\left\{\mathrm{S}_{\mathrm{i}}-v_{\mathrm{i}}\right\} / v_{\mathrm{i}} \in \mathrm{S}_{1}, \quad \mathrm{i}=1,2,3\right\}$
The number of sets which satisfy the above conditions are $3 \times 8 \mathrm{C}_{7}$
Selection of 6 elements from one set and one element from the remaining two sets. Let $v_{\mathrm{i}} \in \mathrm{S}_{1}$
$\left\{\left\{v_{\mathrm{i}}\right\} \cup\left\{\mathrm{S}_{\mathrm{j}}-\mathrm{N}\left(v_{\mathrm{i}}\right) / \mathrm{d}\left(v_{\mathrm{i}}\right)=4\right\}\right.$ in all the six different choices
the total number of sets are $6 \times 4$
(ii) Selection of 5 elements from one set and two elements from any one of the remaining two, for the fixed sets $\mathrm{S}_{1}$ and $\mathrm{S}_{2}$.
$\left\{\left\{v_{\mathrm{i}}, v_{\mathrm{j}}\right\} \cup \mathrm{S}_{2}-\left(v_{\mathrm{i}}, v_{\mathrm{j}}\right)\right\} /\left(v_{\mathrm{i}}, v_{\mathrm{j}}\right) \in \mathrm{S}_{1} ;$
$\mathrm{D}\left(\mathrm{v}_{\mathrm{i}}\right)=\mathrm{d}\left(\mathrm{v}_{\mathrm{j}}\right)=4$ and $\left.\mathrm{N}\left(v_{\mathrm{i}}\right)=\mathrm{N}\left(v_{\mathrm{j}}\right)\right\}$
it can be selected in 2 ways
Therefore, the total choice for all in combinations are $6 \times 2$ sets
(iii) Selection of 5 elements from one set and each one element from the remaining two sets
$\left\{\left\{v_{\mathrm{i}}\right\} \cup\left\{v_{\mathrm{j}}\right\} \cup \mathrm{S}_{3}-\mathrm{N}\left(\mathrm{v}_{\mathrm{i}}, v_{\mathrm{j}}\right) / v_{\mathrm{i}} \in \mathrm{S}_{1,}, v_{\mathrm{j}} \in \mathrm{S}_{2}\right) ;$
$\left.\mathrm{d}\left(v_{\mathrm{i}}\right)=\mathrm{d}\left(v_{\mathrm{j}}\right)=4 \&\left|\mathrm{~N}\left(v_{\mathrm{i}}\right) \cap \mathrm{N}\left(v_{\mathrm{j}}\right)\right|=1\right\}$
it can be selected in 8 ways
for all the three sets, the number of sets which satisfy the above conditions are $3 \times 8$
(iv) Section of 4 elements from one set 2 elements from another set and one element it from the remaining are $\left\{\left\{v_{\mathrm{i}}\right\} \cup\left\{v_{\mathrm{j}}, v_{k}\right\} \cup\{\right.$ any four elements from the five elements of
$\left.\left.\left.\mathrm{S}_{3}-\mathrm{N}\left(v_{\mathrm{i}}\right) \cup \mathrm{N}\left(v_{\mathrm{j}}, v_{\mathrm{k}}\right)\right\} / v_{\mathrm{i}} \in \mathrm{S}_{1}, v_{\mathrm{j}}, v_{\mathrm{k}} \in \mathrm{S}_{2}\right) ; \mathrm{d}\left(v_{\mathrm{i}}\right)=\mathrm{d}\left(v_{\mathrm{j}}\right)=\mathrm{d}\left(\mathrm{v}_{\mathrm{k}}\right)=4 \& \mathrm{~N}\left(v_{\mathrm{j}}\right)=\mathrm{N}\left(v_{\mathrm{k}}\right)\right\}$
It can be selected in $4 \times 5 \mathrm{C}_{4}$ ways
$\left.\left\{\left\{v_{\mathrm{i}}\right\} \cup\left\{v_{\mathrm{j}}, v_{\mathrm{k}}\right\} \cup \mathrm{S}_{3}-\mathrm{N}\left(v_{\mathrm{i}}\right) \cup \mathrm{N}\left(v_{\mathrm{j}}, v_{\mathrm{k}}\right)\right\} /\left\{v_{\mathrm{i}} \in \mathrm{S}_{1}\right\},\left\{v_{\mathrm{j}}, v_{\mathrm{k}} \in \mathrm{S}_{2}\right\}\right) ;$
$\left.\mathrm{d}\left(v_{\mathrm{i}}\right)=\mathrm{d}\left(v_{\mathrm{j}}\right)=\mathrm{d}\left(v_{\mathrm{k}}\right)=4 ;\left|\mathrm{N}\left(v_{\mathrm{j}}\right) \cap \mathrm{N}\left(v_{\mathrm{k}}\right)\right|=4\right\}$
The number of sets which satisfy the conditions are $4 \times 4$ ways

Therefore, for all six different choices total number of sets which satisfy the above conditions are
$6\left[\overline{4 \times 5 \mathrm{C}_{4}}+\overline{4 \times 4}\right]$
(v) Selection of three elements from any two sets and one element from the remaining one
$\left\{\left\{v_{\mathrm{i}}, v_{\mathrm{j}}, v_{\mathrm{k}}\right\} \cup\left\{v_{\mathrm{s}}\right\} \cup\left\{v_{l}, v_{\mathrm{m}}, v_{\mathrm{n}}\right\} /\left\{v_{\mathrm{i}}, v_{\mathrm{j}}, v_{\mathrm{k}}\right\} \in \mathrm{S}_{1} ;\left\{v_{s}\right\} \in \mathrm{S}_{2} ;\right.$
$\left.\left\{v_{l}, v_{\mathrm{m}}, v_{\mathrm{n}}\right\} \in \mathrm{S}_{3}, \mathrm{~d}\left(v_{\mathrm{i}}\right)=\mathrm{d}\left(v_{\mathrm{j}}\right)=\mathrm{d}\left(v_{\mathrm{k}}\right)=\mathrm{d}\left(v_{\mathrm{l}}\right)=4\right\}$
it can be selected in $4 \times 4 C_{3} \times 4 C_{3}$ ways.
for all 3 fixed choice total number of sets which satisfy above conditions are
$3\left[\overline{4 \times 4 \mathrm{C}_{3} \times 4 \mathrm{C}_{3}}\right]$ collections
(vi) Selection of three elements from one set, and each two elements from the remaining two set
$\left\{\left\{v_{\mathrm{i}}, v_{\mathrm{j}}\right\} \cup\left\{v_{\mathrm{k}}, v_{l}\right\} \cup\left\{v_{\mathrm{r}}, v_{\mathrm{s}}, v_{\mathrm{t}}\right\} /\left\{v_{\mathrm{i}}, v_{\mathrm{j}}\right\} \in \mathrm{S}_{1} ;\left\{v_{\mathrm{k}}, v_{l}\right\} \in \mathrm{S}_{2} ;\left\{v_{\mathrm{r}}, v_{\mathrm{s}}, v_{\mathrm{t}}\right\} \in \mathrm{S}_{3}\right.$
$\left.\mathrm{d}\left(v_{\mathrm{i}}\right)=\mathrm{d}\left(v_{\mathrm{j}}\right)=\mathrm{d}\left(v_{\mathrm{k}}\right)=\mathrm{d}\left(v_{l}\right)=4, \mathrm{~N}\left(v_{\mathrm{i}}\right)=\mathrm{N}\left(v_{\mathrm{j}}\right) \& \mathrm{~N}\left(v_{\mathrm{k}}\right)=\mathrm{N}\left(v_{1}\right)\right\}$
The number of sets for the above category are $4 \times 5 \mathrm{C}_{3}$
$\left\{\left\{v_{\mathrm{i}}, v_{\mathrm{j}}\right\} \cup\left\{v_{\mathrm{k}}, v_{l}\right\} \cup\left\{v_{\mathrm{r}}, v_{\mathrm{s}}, v_{\mathrm{t}}\right\} /\left\{v_{\mathrm{i}}, v_{\mathrm{j}}\right\} \in \mathrm{S}_{1} ;\left\{v_{\mathrm{k}}, v_{\mathrm{l}}\right\} \in \mathrm{S}_{2} ;\left\{v_{\mathrm{r}}, v_{\mathrm{s}}, v_{\mathrm{t}}\right\} \in \mathrm{S}_{3}\right.$
$\mathrm{d}\left(v_{\mathrm{i}}\right)=\mathrm{d}\left(v_{\mathrm{j}}\right)=\mathrm{d}\left(v_{\mathrm{k}}\right)=\mathrm{d}\left(v_{\mathrm{l}}\right)=4$ and $\left.\mathrm{N}\left(v_{\mathrm{i}}\right) \neq \mathrm{N}\left(v_{\mathrm{j}}\right)\right\}$
The number of sets which satisfy above conditions are $4 \times 4 \mathrm{C}_{2} \times 4 \mathrm{C}_{3}$
For all three different sets the total number of choices $3\left[\overline{4 \times 5 \mathrm{C}_{3}+4 \times 4 \mathrm{C}_{2} \times 4 \mathrm{C}_{3}}\right]$
Therefore ,

$$
\begin{aligned}
c(G, 17)= & \left(3 \times 8 \mathrm{C}_{7}\right)+(6 \times 4)+(6 \times 2)+(3 \times 8)+6\left[4 \times 5 \mathrm{C}_{4}+4 \times 4\right] \\
& +3\left[\overline{4 \times 4 \mathrm{C}_{3} \times 4 \mathrm{C}_{3}}\right]+3\left[\overline{4 \times 5 \mathrm{C}_{3}}+\overline{4 \times 4 \mathrm{C}_{2} \times 4 \mathrm{C}_{3}}\right]
\end{aligned}
$$

## VII) Covering sets with cardinality sixteen is equal to the Independent set with cardinality 8

(i) Selection of eight elements from each set $\left\{\mathrm{S}_{\mathrm{i}} / \mathrm{i}=1,2,3\right\}$. This can be selected in 3 ways.
(ii) Selection of six elements from one set and 2 elements from one among the other two sets
$\left\{\left\{v_{\mathrm{i}}, v_{\mathrm{j}}\right\} \cup\left\{S_{2}-\mathrm{N}\left(v_{\mathrm{i}}, v_{\mathrm{j}}\right) /\left\{v_{\mathrm{i}}, v_{\mathrm{j}}\right\} \in \mathrm{S}_{1} ; \mathrm{d}\left(v_{\mathrm{i}}\right)=\mathrm{d}\left(v_{\mathrm{j}}\right)=4 ; \mathrm{N}\left(v_{\mathrm{i}}\right)=\mathrm{N}\left(v_{\mathrm{j}}\right)\right\}\right.$
Two sets which satisfy the above condition.
For the all six sets. Total number of choices are $6 \times 2$
(iii) Selection of five element from any one, two element from one among the remaining two, one element from the other, the six different categories are
$\left.\left\{\left\{v_{\mathrm{i}}\right\} \cup\left\{v_{\mathrm{j}}, v_{\mathrm{k}}\right\} \cup \mathrm{S}_{3}-\mathrm{N}\left(v_{\mathrm{i}}\right) \cup \mathrm{N}\left(v_{\mathrm{j}}, v_{\mathrm{k}}\right)\right\} / v_{\mathrm{i}} \in \mathrm{S}_{1}, v_{\mathrm{j}}, v_{\mathrm{k}} \in \mathrm{S}_{2}\right)$;
$\left.\mathrm{d}\left(v_{\mathrm{i}}\right)=\mathrm{d}\left(v_{\mathrm{j}}\right)=\mathrm{d}\left(v_{\mathrm{k}}\right)=4 ; \mathrm{N}\left(v_{\mathrm{j}}\right)=\mathrm{N}\left(v_{\mathrm{k}}\right)\right\}$
For each $v_{\mathrm{i}} \in \mathrm{S}_{1}$, two elements $\left\{v_{\mathrm{j}}, v_{\mathrm{k}}\right\} \in \mathrm{S}_{2}$ satisfies the above condition.
Therefore $4 \times 2$ number of sets which satisfy the above condition.
For all the six different choices $6 \times 4 \times 2$ sets have the above property.
(iv) Selection of each four elements from any two sets and one element from the other
$\left\{\left\{v_{\mathrm{i}}, v_{\mathrm{j}}\right\} \cup\left\{v_{\mathrm{k}}, v_{l}\right\} /\left\{v_{\mathrm{i}}, v_{\mathrm{j}}\right\} \in \mathrm{S}_{1},\left\{v_{\mathrm{k}}, v_{l}\right\} \in \mathrm{S}_{2}\right) ; \mathrm{d}\left(v_{\mathrm{i}}\right)=\mathrm{d}\left(v_{\mathrm{j}}\right)=\mathrm{d}\left(v_{\mathrm{k}}\right)=\mathrm{d}\left(v_{l}\right)=4$
$\left.\mathrm{N}\left(v_{\mathrm{i}}\right)=\mathrm{N}\left(v_{\mathrm{j}}\right) \& \mathrm{~N}\left(v_{\mathrm{k}}\right)=\mathrm{N}\left(v_{l}\right)\right\}$
Totally 3 sets which satisfy the above property
(v) Selection of Four elements from one set, three elements from another \& one from the remaining one
$\left\{\left\{v_{\mathrm{i}}, v_{\mathrm{j},}, v_{\mathrm{k}}, v_{l}\right\} \cup\left\{v_{\mathrm{r}}, v_{\mathrm{s}}, v_{\mathrm{t}}\right\} \cup\left\{v_{\mathrm{m}}\right\} /\left\{v_{\mathrm{i}}, v_{\mathrm{j},}, v_{\mathrm{k}}, v_{l}\right\} \in \mathrm{S}_{1}\right.$,
$\left\{v_{\mathrm{r}}, v_{\mathrm{s}}, v_{\mathrm{t}}\right\} \in \mathrm{S}_{2} ;\left\{v_{\mathrm{m}}\right\} \in \mathrm{S}_{3} ;$ all vertices of degree 4$\}$
It can be selected in 16 ways.
For all six different choices $6 \times 16$ sets which satisfy the above category.
(vi) Selection of four elements from any one and each two elements from the remaining two sets.
$\left\{\left\{v_{\mathrm{i}}, v_{\mathrm{j},}, v_{\mathrm{k}}, v_{l}\right\} \cup\left\{v_{\mathrm{r}}, v_{\mathrm{s}}\right\} \cup\left\{v_{\mathrm{m}}, v_{\mathrm{n}}\right\} /\left\{v_{\mathrm{i}}, v_{\mathrm{j},}, v_{\mathrm{k}}, v_{l}\right\} \in \mathrm{S}_{1,}\left\{v_{\mathrm{r}}, v_{\mathrm{s}}\right\} \in \mathrm{S}_{2} ;\left\{v_{\mathrm{m}}, v_{\mathrm{n}}\right\} \in \mathrm{S}_{3} ;\right.$
$\left.\mathrm{d}\left(v_{\mathrm{i}}\right)=\mathrm{d}\left(v_{\mathrm{j}}\right)=\mathrm{d}\left(v_{\mathrm{k}}\right)=\mathrm{d}\left(v_{l}\right)=\mathrm{d}\left(v_{r}\right)=\mathrm{d}\left(v_{\mathrm{s}}\right)=\mathrm{d}\left(v_{\mathrm{m}}\right)=\mathrm{d}\left(v_{\mathrm{n}}\right)=4\right\}$
It can be selected in $1 \times 4 \mathrm{C}_{2} \times 4 \mathrm{C}_{2}$ ways
For all the 3 different choice the number of sets satisfy the above category $3 \times 4 \mathrm{C}_{2} \times 4 \mathrm{C}_{2}$
(vii)Selection of each 3 elements from any two sets and 2 from the remaining set
$\left\{\left\{v_{\mathrm{i}}, v_{\mathrm{j}}, v_{\mathrm{k}}\right\} \cup\left\{v_{\mathrm{r}}, v_{\mathrm{s}}, v_{\mathrm{t}}\right\} \cup\left\{v_{\mathrm{l}}, v_{\mathrm{m}}\right\} /\left\{v_{\mathrm{i}}, v_{\mathrm{j},}, v_{\mathrm{k}}\right\} \in \mathrm{S}_{1,}\right.$,
$\left\{v_{\mathrm{r}}, v_{\mathrm{s}}, v_{\mathrm{t}}\right\} \in \mathrm{S}_{2} ;\left\{v_{l}, v_{\mathrm{m}}\right\} \in \mathrm{S}_{3} ;$ all vertices of degree 4$\}$
It can be selected in $4 C_{3} \times 4 C_{3} \times 4 C_{2}$ ways.
(viii) For all 3 different choices the number of sets which satisfy the above condition are

$$
3 \times 4 \mathrm{C}_{3} \times 4 \mathrm{C}_{3} \times 4 \mathrm{C}_{2}
$$

Therefore, the covering sets with cardinality 16 is

$$
c(\underline{G, 16)}=3+\overline{6 \times 2}+\overline{6 \times 4 \times 2}+3+\overline{6 \times 16}
$$

$$
\begin{equation*}
+\overline{3 \times 4 \mathrm{C}_{2} \times 4 \mathrm{C}_{2}}+\overline{3 \times 4 \mathrm{C}_{3} \times 4 \mathrm{C}_{3} \times 4 \mathrm{C}_{2}} \tag{A}
\end{equation*}
$$

Therefore, the vertex covering polynomial
$\mathrm{C}(\mathrm{G}, x)=x^{24}+24 x^{23}+228 x^{22}+802 x^{21}+1584 x^{20}+1524 x^{19}+1305 x^{18}+900 x^{17}+558 x^{16}$
Lemma: 2.8 The coefficients of the cover polynomial of (A) is $x^{-16}[C(G, x)]$ is log-concave.
Proof: Clearly $\mathrm{a}_{\mathrm{i}}^{2} \geq \mathrm{a}_{\mathrm{i}-1} . \mathrm{a}_{\mathrm{i}+1}, \forall \mathrm{i}=1,2, \ldots, 9$.
Therefore, $x{ }^{-16}[\mathrm{C}(\mathrm{G}, x)]$ is log-concave.
