#### Abstract

A Radio Mean labeling of a connected graph $G$ is a one to one map $h$ from the vertex set $V(G)$ to the set of natural numbers $N$ such that for any two distinct vertices $x$ and $y$ of $G, d(x, y)+\left\lceil\frac{h(x)+h(y)}{2}\right\rceil \geq 1+\operatorname{diam}(G)$. The radio mean number of $h, r m n(h)$, is the maximum number assigned to any vertex of $G$. The radio mean number of $G, r m n(G)$, is the minimum value of rmn(h) taken over all radio mean labelings $h$ of $G$. In this paper we find the radio mean number of double triangular snake graph and double quadrilateral snake graph.

Keywords: Radio mean labeling, Diameter, Double triangular snake graph and Double quadrilateral snake graph.

## 1. INTRODUCTION AND DEFINITIONS

Throughout this paper we consider finite, simple, undirected and connected graphs. $\mathrm{V}(\mathrm{G})$ and $\mathrm{E}(\mathrm{G})$ respectively denote the vertex set and edge set of G. Radio labeling, or multilevel distance labeling, is motivated by the channel assignment problem for radio transmitters [1]. Ponraj et al. [3] introduced the notion of radio mean labeling of graphs and investigated radio mean number of some graphs [11]. D.S.T. Ramesh, A. Subramanian and K. Sunitha investigated radio number for some graphs [9,10] and introduced the radio mean square labeling of some graphs [8]. The span of a labeling $h$ is the maximum integer that $h$ maps to a vertex of $G$. The radio mean number of $G, r m n(G)$ is the lowest span taken over all radio mean labeling of the graph G. For standard terminology and notations we follow Harary [4] and Gallian [7]. The distance between two vertices $x$ and $y$ of $G$ is denoted by $d(x, y)$ and diam( G ) indicate the diameter of G .

Definition 1.1[2]: The distance $d(u, v)$ from a vertex $u$ to a vertex $v$ in a connected graph $G$ is the minimum of the lengths of the $u-v$ paths in $G$.

Definition 1.2[2]: The eccentricity $\mathrm{e}(\mathrm{v})$ of a vertex v in a connected graph G is the distance between v and a vertex farthest from v in G .

Definition 1.3[2]: The diameter diam(G) of $G$ is the greatest eccentricity among the vertices of $G$.
Definition 1.4 [5]: A double triangular snake consists of two triangular snakes that have a common path. That is, a double triangular snake $\mathrm{DT}_{\mathrm{n}}$ is a graph obtained from a path $\mathrm{x}_{1}, \mathrm{x}_{2}, \ldots, \mathrm{x}_{\mathrm{n}}$ by joining $\mathrm{x}_{\mathrm{i}}$ and $\mathrm{x}_{\mathrm{i}+1}$ to two new vertices $\mathrm{y}_{\mathrm{i}}$ and $\mathrm{z}_{\mathrm{i}}, 1 \leq \mathrm{i} \leq \mathrm{n}-1$.

Definition 1.5 [6]: A double quadrilateral snake $\mathrm{DQ}_{\mathrm{n}}$ consists of two quadrilateral snakes that have a common path. That is, a double quadrilateral snake graph $D Q_{n}$ is a graph obtained from a path $x_{1}, x_{2}, \ldots, x_{n}$ by joining $x_{i}$ and $x_{i+1}$ to new vertices $y_{i}, y_{i}^{\prime}$ and $z_{i}, z_{i}^{\prime}$ respectively and then joining $y_{i}, z_{i}$ and $y_{i}^{\prime}, z_{i}^{\prime}$.

## 2. MAIN RESULTS

Theorem 2.1: $\operatorname{rmn}\left(D_{n}\right)=4 n-4, n \geq 2$
Proof: Consider a path $\mathrm{x}_{1}, \mathrm{x}_{2}, \ldots, \mathrm{x}_{\mathrm{n}}$. Join $\mathrm{x}_{\mathrm{i}}$ and $\mathrm{x}_{\mathrm{i}+1}$ to two new vertices $\mathrm{y}_{\mathrm{i}}$ and $\mathrm{z}_{\mathrm{i}}, 1 \leq \mathrm{i} \leq \mathrm{n}-1$.
The resultant graph is $\mathrm{DT}_{\mathrm{n}}$ whose edge set is $\mathrm{E}=\left\{\mathrm{x}_{\mathrm{i}} \mathrm{X}_{\mathrm{i}+1}, \mathrm{X}_{\mathrm{i}} \mathrm{y}_{\mathrm{i}}, \mathrm{x}_{\mathrm{i}+1} \mathrm{y}_{\mathrm{i}}, \mathrm{x}_{\mathrm{i}} \mathrm{z}_{\mathrm{i}}, \mathrm{x}_{\mathrm{i}+1} \mathrm{z}_{\mathrm{i}}, 1 \leq \mathrm{i} \leq \mathrm{n}-1\right\}$ and $\operatorname{diam}\left(\mathrm{DT} \mathrm{T}_{\mathrm{n}}\right)=\mathrm{n}-1$.
Define a function $\mathrm{h}: \mathrm{V}\left(\mathrm{DT}_{\mathrm{n}}\right) \rightarrow \mathrm{N}$ by

$$
\begin{aligned}
& \mathrm{h}\left(\mathrm{x}_{\mathrm{i}}\right)=3 \mathrm{n}+\mathrm{i}-4,1 \leq \mathrm{i} \leq \mathrm{n} \\
& \mathrm{~h}\left(\mathrm{y}_{\mathrm{i}}\right)=\mathrm{n}+2 \mathrm{i}-3,1 \leq \mathrm{i} \leq \mathrm{n}-1 \\
& \mathrm{~h}\left(\mathrm{z}_{\mathrm{i}}\right)=\mathrm{n}+2 \mathrm{i}-2,1 \leq \mathrm{i} \leq \mathrm{n}-1
\end{aligned}
$$

Next we check the radio mean condition for h .
Case-a: Consider the pair $\left(\mathrm{x}_{\mathrm{i}}, \mathrm{x}_{\mathrm{j}}\right), \mathrm{i} \neq \mathrm{j}, 1 \leq \mathrm{i}, \mathrm{j} \leq \mathrm{n}$

$$
\mathrm{d}\left(\mathrm{x}_{\mathrm{i}}, \mathrm{x}_{\mathrm{j}}\right)+\left\lceil\frac{\mathrm{h}\left(\mathrm{x}_{\mathrm{i}}\right)+\mathrm{h}\left(\mathrm{x}_{\mathrm{j}}\right)}{2}\right\rceil \geq 1+\left\lceil\frac{6 \mathrm{n}+\mathrm{i}+\mathrm{j}-8}{2}\right\rceil \geq \mathrm{n}=1+\operatorname{diam}\left(\mathrm{DT}_{\mathrm{n}}\right)
$$

Case-b: Consider the pair $\left(\mathrm{x}_{\mathrm{i}}, \mathrm{y}_{\mathrm{j}}\right), 1 \leq \mathrm{i} \leq \mathrm{n}, 1 \leq \mathrm{j} \leq \mathrm{n}-1$

$$
\mathrm{d}\left(\mathrm{x}_{\mathrm{i}}, \mathrm{y}_{\mathrm{j}}\right)+\left\lceil\frac{\mathrm{h}\left(\mathrm{x}_{\mathrm{i}}\right)+\mathrm{h}\left(\mathrm{y}_{\mathrm{j}}\right)}{2}\right\rceil \geq 1+\left\lceil\frac{4 \mathrm{n}+\mathrm{i}+2 \mathrm{j}-7}{2}\right\rceil \geq \mathrm{n}
$$

Case-c: Consider the pair $\left(\mathrm{y}_{\mathrm{i}}, \mathrm{y}_{\mathrm{j}}\right), \mathrm{i} \neq \mathrm{j}, 1 \leq \mathrm{i}, \mathrm{j} \leq \mathrm{n}-1$

$$
\mathrm{d}\left(\mathrm{y}_{\mathrm{i}}, \mathrm{y}_{\mathrm{j}}\right)+\left\lceil\frac{\mathrm{h}\left(\mathrm{y}_{\mathrm{i}}\right)+\mathrm{h}\left(\mathrm{y}_{\mathrm{j}}\right)}{2}\right\rceil \geq 2+\left\lceil\frac{2 \mathrm{n}+2 \mathrm{i}+2 \mathrm{j}-6}{2}\right\rceil \geq \mathrm{n}, \mathrm{n} \geq 3
$$

Case-d: Consider the pair $\left(\mathrm{x}_{\mathrm{i}}, \mathrm{z}_{\mathrm{j}}\right), 1 \leq \mathrm{i} \leq \mathrm{n}, 1 \leq \mathrm{j} \leq \mathrm{n}-1$

$$
\mathrm{d}\left(\mathrm{x}_{\mathrm{i}}, \mathrm{z}_{\mathrm{j}}\right)+\left\lceil\frac{\mathrm{h}\left(\mathrm{x}_{\mathrm{i}}\right)+\mathrm{h}\left(\mathrm{z}_{\mathrm{j}}\right)}{2}\right\rceil \geq 1+\left\lceil\frac{4 \mathrm{n}+\mathrm{i}+2 \mathrm{j}-6}{2}\right\rceil \geq \mathrm{n}
$$

Case-e: Consider the pair $\left(\mathrm{z}_{\mathrm{i}}, \mathrm{z}_{\mathrm{j}}\right), \mathrm{i} \neq \mathrm{j}, 1 \leq \mathrm{i}, \mathrm{j} \leq \mathrm{n}-1$

$$
\mathrm{d}\left(\mathrm{z}_{\mathrm{i}}, \mathrm{z}_{\mathrm{j}}\right)+\left\lceil\frac{\mathrm{h}\left(\mathrm{z}_{\mathrm{i}}\right)+\mathrm{h}\left(\mathrm{z}_{\mathrm{j}}\right)}{2}\right\rceil \geq 2+\left\lceil\frac{2 \mathrm{n}+2 \mathrm{i}+2 \mathrm{j}-4}{2}\right\rceil \geq \mathrm{n}
$$

Case-f: Consider the pair $\left(\mathrm{y}_{\mathrm{i}}, \mathrm{z}_{\mathrm{j}}\right), 1 \leq \mathrm{i}, \mathrm{j} \leq \mathrm{n}-1$

$$
\mathrm{d}\left(\mathrm{y}_{\mathrm{i}}, \mathrm{z}_{\mathrm{j}}\right)+\left\lceil\frac{\mathrm{h}\left(\mathrm{y}_{\mathrm{i}}\right)+\mathrm{h}\left(\mathrm{z}_{\mathrm{j}}\right)}{2}\right\rceil \geq 2+\left\lceil\frac{2 \mathrm{n}+2 \mathrm{i}+2 \mathrm{j}-5}{2}\right\rceil \geq \mathrm{n}
$$

Thus, the radio mean condition is satisfied for all pairs of vertices. Hence $h$ is a valid radio mean labeling of $\mathrm{DT}_{\mathrm{n}}$. Therefore $\operatorname{rmn}\left(\mathrm{DT}_{\mathrm{n}}\right) \leq \operatorname{rmn}(\mathrm{h})=4 \mathrm{n}-4$

Since $h$ is injective, $r m n\left(D T_{n}\right) \geq 4 n-4$ for all radio mean labelings $h$ and hence $r m n\left(D T_{n}\right)=4 n-4, n \geq 2$.

## Example 2.1:

Figure 1

Theorem 2.2: $\operatorname{rmn}\left(D Q_{n}\right)=6(n-1), n \geq 2$
Proof: Let $x_{1}, x_{2}, \ldots, x_{n}$ be a path. For $1 \leq i \leq n-1$, add vertices $y_{i}$ and $z_{i}$ and join them with $x_{i}$. For $1 \leq i \leq n-1$, add vertices $y_{i}{ }^{\prime}$ and $z_{i}{ }^{\prime}$ and join them with $x_{i+1}$. Finally join $y_{i}$ and $y_{i}$ ' and join $z_{i}$ and $z_{i}$. The resultant graph is $D Q_{n}$ whose edge set is $E\left(D Q_{n}\right)=\left\{x_{i} x_{i+1}, x_{i+1} x_{i}^{\prime}, x_{i+1} z_{i}^{\prime}, x_{i} y_{i}, y_{i} y_{i}^{\prime}, x_{i} z_{i}, z_{i} z_{i}^{\prime} / 1 \leq i \leq n-1\right\}$ and diam $\left(D Q_{n}\right)=n-1$. Define a function h: $\mathrm{V}\left(\mathrm{DQ}_{\mathrm{n}}\right) \rightarrow \mathrm{N}$ by

$$
\begin{aligned}
& \mathrm{h}\left(\mathrm{x}_{\mathrm{i}}\right)=5 \mathrm{n}-6+\mathrm{i}, 1 \leq \mathrm{i} \leq \mathrm{n} \\
& \mathrm{~h}\left(\mathrm{y}_{\mathrm{i}}\right)=\mathrm{n}+2 \mathrm{i}-3,1 \leq \mathrm{i} \leq \mathrm{n}-1 \\
& \mathrm{~h}\left(\mathrm{y}_{\mathrm{i}}^{\prime}\right)=3 \mathrm{n}+2 \mathrm{i}-4,1 \leq \mathrm{i} \leq \mathrm{n}-1 \\
& \left.\mathrm{~h} \mathrm{z}_{\mathrm{i}}\right)=3 \mathrm{n}+2 \mathrm{i}-5,1 \leq \mathrm{i} \leq \mathrm{n}-1 \\
& \mathrm{~h}\left(\mathrm{z}_{\mathrm{i}}^{\prime}\right)=\mathrm{n}+2 \mathrm{i}-2,1 \leq \mathrm{i} \leq \mathrm{n}-1
\end{aligned}
$$

Now we check the radio mean condition for $h$.
Case-a: Consider the pair $\left(\mathrm{y}_{\mathrm{i}}, \mathrm{y}_{\mathrm{j}}{ }^{\prime}\right), 1 \leq \mathrm{i}, \mathrm{j} \leq \mathrm{n}-1$

$$
\mathrm{d}\left(\mathrm{y}_{\mathrm{i}}, \mathrm{y}_{\mathrm{i}}^{\prime}\right)+\left\lceil\frac{\mathrm{h}\left(\mathrm{y}_{\mathrm{i}}\right)+\mathrm{h}\left(\mathrm{y}_{\mathrm{i}}^{\prime}\right)}{2}\right\rceil \geq 1+\left\lceil\frac{4 \mathrm{n}+2 \mathrm{i}+2 \mathrm{j}-7}{2}\right\rceil \geq \mathrm{n}=1+\operatorname{diam}\left(\mathrm{DQ}_{\mathrm{n}}\right)
$$

Case-b: Consider the pair $\left(\mathrm{y}_{\mathrm{i}}, \mathrm{y}_{\mathrm{j}}\right), \mathrm{i} \neq \mathrm{j}, 1 \leq \mathrm{i}, \mathrm{j} \leq \mathrm{n}-1$

$$
d\left(y_{i}, y_{j}\right)+\left\lceil\frac{h\left(y_{i}\right)+h\left(y_{j}\right)}{2}\right\rceil \geq 3+\left\lceil\frac{2 n+2 i+2 j-6}{2}\right\rceil \geq n
$$

Case-c: Consider the pair $\left(\mathrm{y}_{\mathrm{i}}^{\prime}, \mathrm{y}_{\mathrm{j}}{ }^{\prime}\right), \mathrm{i} \neq \mathrm{j}$ and $1 \leq \mathrm{i}, \mathrm{j} \leq \mathrm{n}-1$

$$
\mathrm{d}\left(\mathrm{y}_{\mathrm{i}}^{\prime}, \mathrm{y}_{\mathrm{j}}^{\prime}\right)+\left\lceil\frac{\mathrm{h}\left(\mathrm{y}_{\mathrm{i}}^{\prime}\right)+\mathrm{h}\left(\mathrm{y}_{\mathrm{j}}^{\prime}\right)}{2}\right\rceil \geq 3+\left\lceil\frac{6 \mathrm{n}+2 \mathrm{i}+2 \mathrm{j}-8}{2}\right\rceil \geq \mathrm{n}, \mathrm{n} \geq 3
$$

Case-d: Consider the pair $\left(\mathrm{x}_{\mathrm{i}}, \mathrm{x}_{\mathrm{j}}\right), \mathrm{i} \neq \mathrm{j}, 1 \leq \mathrm{i}, \mathrm{j} \leq \mathrm{n}$

$$
\mathrm{d}\left(\mathrm{x}_{\mathrm{i}}, \mathrm{x}_{\mathrm{j}}\right)+\left\lceil\frac{\mathrm{h}\left(\mathrm{x}_{\mathrm{i}}\right)+\mathrm{h}\left(\mathrm{x}_{\mathrm{j}}\right)}{2}\right\rceil \geq 1+\left\lceil\frac{10 \mathrm{n}+\mathrm{i}+\mathrm{j}-12}{2}\right\rceil \geq \mathrm{n}
$$

Case-e: Consider the pair $\left(\mathrm{x}_{\mathrm{i}}, \mathrm{y}_{\mathrm{j}}\right), 1 \leq \mathrm{i} \leq \mathrm{n}$ and $1 \leq \mathrm{j} \leq \mathrm{n}-1$

$$
\mathrm{d}\left(\mathrm{x}_{\mathrm{i}}, \mathrm{y}_{\mathrm{j}}\right)+\left\lceil\frac{\mathrm{h}\left(\mathrm{x}_{\mathrm{i}}\right)+\mathrm{h}\left(\mathrm{y}_{\mathrm{j}}\right)}{2}\right\rceil \geq 1+\left\lceil\frac{6 \mathrm{n}+\mathrm{i}+2 \mathrm{j}-9}{2}\right\rceil \geq \mathrm{n}
$$

Case-f: Consider the pair $\left(\mathrm{x}_{\mathrm{i}}, \mathrm{y}_{\mathrm{j}}{ }^{\prime}\right), 1 \leq \mathrm{i} \leq \mathrm{n}$ and $1 \leq \mathrm{j} \leq \mathrm{n}-1$

$$
\mathrm{d}\left(\mathrm{x}_{\mathrm{i}}, \mathrm{y}_{\mathrm{j}}^{\prime}\right)+\left\lceil\frac{\mathrm{h}\left(\mathrm{x}_{\mathrm{i}}\right)+\mathrm{h}\left(\mathrm{y}_{\mathrm{j}}^{\prime}\right)}{2}\right\rceil \geq 2+\left\lceil\frac{8 \mathrm{n}+\mathrm{i}+2 \mathrm{j}-10}{2}\right\rceil \geq \mathrm{n}
$$

Case-g: Consider the pair $\left(\mathrm{x}_{\mathrm{i}}, \mathrm{z}_{\mathrm{j}}\right), 1 \leq \mathrm{i} \leq \mathrm{n}$ and $1 \leq \mathrm{j} \leq \mathrm{n}-1$

$$
\mathrm{d}\left(\mathrm{x}_{\mathrm{i}}, \mathrm{z}_{\mathrm{j}}\right)^{+}\left\lceil\frac{\mathrm{h}\left(\mathrm{x}_{\mathrm{i}}\right)+\mathrm{h}\left(\mathrm{z}_{\mathrm{j}}\right)}{2}\right\rceil \geq 1+\left\lceil\frac{8 \mathrm{n}+\mathrm{i}+2 \mathrm{j}-11}{2}\right\rceil \geq \mathrm{n}
$$

Case-h: Consider the pair $\left(\mathrm{x}_{\mathrm{i}}, \mathrm{z}_{\mathrm{j}}{ }^{\prime}\right), 1 \leq \mathrm{i} \leq \mathrm{n}$ and $1 \leq \mathrm{j} \leq \mathrm{n}-1$

$$
\mathrm{d}\left(\mathrm{x}_{\mathrm{i}}, \mathrm{z}_{\mathrm{j}}^{\prime}\right)+\left\lceil\frac{\mathrm{h}\left(\mathrm{x}_{\mathrm{i}}\right)+\mathrm{h}\left(\mathrm{z}_{\mathrm{j}}^{\prime}\right)}{2}\right\rceil \geq 2+\left\lceil\frac{6 \mathrm{n}+\mathrm{i}+2 \mathrm{j}-8}{2}\right\rceil \geq \mathrm{n}
$$

Case-i: Consider the pair $\left(\mathrm{y}_{\mathrm{i}}, \mathrm{z}_{\mathrm{j}}\right), 1 \leq \mathrm{i}, \mathrm{j} \leq \mathrm{n}-1$

$$
\mathrm{d}\left(\mathrm{y}_{\mathrm{i}}, \mathrm{z}_{\mathrm{j}}\right)+\left\lceil\frac{\mathrm{h}\left(\mathrm{y}_{\mathrm{i}}\right)+\mathrm{h}\left(\mathrm{z}_{\mathrm{j}}\right)}{2}\right\rceil \geq 2+\left\lceil\frac{4 \mathrm{n}+2 \mathrm{i}+2 \mathrm{j}-8}{2}\right\rceil \geq \mathrm{n}
$$

Case-j: Consider the pair $\left(\mathrm{y}_{\mathrm{i}}^{\prime}, \mathrm{z}_{\mathrm{j}}{ }^{\prime}\right), 1 \leq \mathrm{i}, \mathrm{j} \leq \mathrm{n}-1$

$$
\mathrm{d}\left(\mathrm{y}_{\mathrm{i}}^{\prime}, \mathrm{z}_{\mathrm{j}}^{\prime}\right)+\left\lceil\frac{\mathrm{h}\left(\mathrm{y}_{\mathrm{i}}^{\prime}\right)+\mathrm{h}\left(\mathrm{z}_{\mathrm{j}}^{\prime}\right)}{2}\right\rceil \geq 2+\left\lceil\frac{4 \mathrm{n}+2 \mathrm{i}+2 \mathrm{j}-6}{2}\right\rceil \geq \mathrm{n}
$$

Case-k: Consider the pair $\left(\mathrm{y}_{\mathrm{i}}, \mathrm{z}_{\mathrm{j}}{ }^{\prime}\right), 1 \leq \mathrm{i}, \mathrm{j} \leq \mathrm{n}-1$

$$
\mathrm{d}\left(\mathrm{y}_{\mathrm{i}}, \mathrm{z}_{\mathrm{j}}^{\prime}\right)+\left\lceil\frac{\mathrm{h}\left(\mathrm{y}_{\mathrm{i}}\right)+\mathrm{h}\left(\mathrm{z}_{\mathrm{j}}^{\prime}\right)}{2}\right\rceil \geq 3+\left\lceil\frac{2 \mathrm{n}+2 \mathrm{i}+2 \mathrm{j}-5}{2}\right\rceil \geq \mathrm{n}
$$

Case-1: Consider the pair $\left(\mathrm{y}_{\mathrm{i}}^{\prime}, \mathrm{z}_{\mathrm{j}}\right), 1 \leq \mathrm{i}, \mathrm{j} \leq \mathrm{n}-1$

$$
\mathrm{d}\left(\mathrm{y}_{\mathrm{i}}^{\prime}, \mathrm{z}_{\mathrm{j}}\right)+\left\lceil\frac{\mathrm{h}\left(\mathrm{y}_{\mathrm{i}}^{\prime}\right)+\mathrm{h}\left(\mathrm{z}_{\mathrm{j}}\right)}{2}\right\rceil \geq 2+\left\lceil\frac{6 \mathrm{n}+2 \mathrm{i}+2 \mathrm{j}-9}{2}\right\rceil \geq \mathrm{n}
$$

Case-m: Consider the pair $\left(\mathrm{z}_{\mathrm{i}}, \mathrm{z}_{\mathrm{j}}\right), \mathrm{i} \neq \mathrm{j}, 1 \leq \mathrm{i}, \mathrm{j} \leq \mathrm{n}-1$

$$
\mathrm{d}\left(\mathrm{z}_{\mathrm{i}}, \mathrm{z}_{\mathrm{j}}\right)+\left\lceil\frac{\mathrm{h}\left(\mathrm{z}_{\mathrm{i}}\right)+\mathrm{h}\left(\mathrm{z}_{\mathrm{j}}\right)}{2}\right\rceil \geq 3+\left\lceil\frac{6 \mathrm{n}+2 \mathrm{i}+2 \mathrm{j}-10}{2}\right\rceil \geq \mathrm{n}, \mathrm{n} \geq 3
$$

Case-n: Consider the pair $\left(\mathrm{z}_{\mathrm{i}}^{\prime}, \mathrm{z}_{\mathrm{j}}{ }^{\prime}\right), \mathrm{i} \neq \mathrm{j}$ and $1 \leq \mathrm{i}, \mathrm{j} \leq \mathrm{n}-1$

$$
\mathrm{d}\left(\mathrm{z}_{\mathrm{i}}^{\prime}, \mathrm{z}_{\mathrm{j}}^{\prime}\right)+\left\lceil\frac{\mathrm{h}\left(\mathrm{z}_{\mathrm{i}}^{\prime}\right)+\mathrm{h}\left(\mathrm{z}_{\mathrm{j}}^{\prime}\right)}{2}\right\rceil \geq 3+\left\lceil\frac{2 \mathrm{n}+2 \mathrm{i}+2 \mathrm{j}-4}{2}\right\rceil \geq \mathrm{n}, \mathrm{n} \geq 3
$$

Case-o: Consider the pair $\left.\left(\mathrm{z}_{\mathrm{i}}, \mathrm{z}_{\mathrm{j}}\right)^{\prime}\right), 1 \leq \mathrm{i}, \mathrm{j} \leq \mathrm{n}-1$

$$
\mathrm{d}\left(\mathrm{z}_{\mathrm{i}}, \mathrm{z}_{\mathrm{j}}^{\prime}\right)+\left\lceil\frac{\mathrm{h}\left(\mathrm{z}_{\mathrm{i}}\right)+\mathrm{h}\left(\mathrm{z}_{\mathrm{j}}^{\prime}\right)}{2}\right\rceil \geq 1+\left\lceil\frac{4 \mathrm{n}+2 \mathrm{i}+2 \mathrm{j}-7}{2}\right\rceil \geq \mathrm{n}
$$

Thus, the radio mean condition is satisfied for all pairs of vertices. Hence $h$ is a valid radio mean labeling of $\mathrm{DQ}_{\mathrm{n}}$.
Therefore $\operatorname{rmn}\left(\mathrm{DQ}_{\mathrm{n}}\right) \leq \operatorname{rmn}(\mathrm{h})=6(\mathrm{n}-1)$
Since $h$ is injective, $r m n\left(D Q_{n}\right) \geq 6(n-1)$ for all radio mean labelings $h$ and hence $r m n\left(D Q_{n}\right)=6(n-1), n \geq 2$
