#### Abstract

A topological index is a numeric quantity from structural graph of a molecule. In this paper, we introduce the multiplicative Sombor index, multiplicative modified Sombor index, multiplicative reduced Sombor index and multiplicative reduced modified Sombor index of a graph. Furthermore we compute these multiplicative Sombor indices for certain nanotubes.

Mathematics Subject Classification: 05C05, 05C07, 05C35.
Keywords: multiplicative Sombor index, multiplicative modified Sombor index, multiplicative reduced Sombor index, nanotube.

## 1. INTRODUCTION

We consider only finite, simple connected graph with vertex set $V(G)$ and edge set $E(G)$. The degree $d_{G}(u)$ of a vertex $u$ is the number of vertices adjacent to $u$. For undefined term and notation, we refer the book [1].

A molecular graph is a graph such that its vertices correspond to the atoms and the edges to the bonds. Chemical Graph Theory is a branch of Mathematical Chemistry, which has an important affect on the development of the Chemical Sciences. Topological indices are useful for establishing correlation between the structure of a molecular compound and its physicochemical properties. Several topological indices [2] have been considered in Theoretical Chemistry and have found some applications, especially in QSPR/QSAR study, see [3, 4, 5].

The Sombor index [6] was introduced and defined it as

$$
S O(G)=\sum_{u v \in E(G)} \sqrt{d_{G}(u)^{2}+d_{G}(v)^{2}}
$$

The modified Sombor index was introduced by Kulli at al. in [7], defined as

$$
{ }^{m} S O(G)=\sum_{u v \in E(G)} \frac{1}{\sqrt{d_{G}(u)^{2}+d_{G}(v)^{2}}}
$$

Recently, some Sombor indices were studied in [8, 9, 10, 11, 12].
Inspired by work on Sombor indices, we introduce the multiplicative Sombor index, multiplicative modified Sombor index, general multiplicative first $(a, b)-K A$ index of a graph as follows:

The multiplicative Sombor index of a graph $G$ is defined as

$$
\operatorname{SOII}(G)=\prod_{u v \in E(G)} \sqrt{d_{G}(u)^{2}+d_{G}(v)^{2}}
$$

The multiplicative modified Sombor index of a graph $G$ is defined as

$$
{ }^{m} \operatorname{SOII}(G)=\prod_{u v \in E(G)} \frac{1}{\sqrt{d_{G}(u)^{2}+d_{G}(v)^{2}}} .
$$

The multiplicative first and second $(a, b)-K A$ indices of a graph $G$ were defined by Kulli in [13], as

$$
\begin{aligned}
& K A_{a, b}^{1} I I(G)=\prod_{u v \in E(G)}\left[d_{G}(u)^{a}+d_{G}(v)^{a}\right]^{b} \\
& K A_{a, b}^{2} I I(G)=\prod_{u v \in E(G)}\left[d_{G}(u)^{a} d_{G}(v)^{a}\right]^{b}
\end{aligned}
$$

Motivated by the definition of the reduced indices, we introduce the multiplicative reduced Sombor index, multiplicative reduced modified Sombor index, general multiplicative reduced first $(a, b)-K A$ index of a graph as follows:

The multiplicative reduced Sombor index of a graph $G$ is defined as

$$
\operatorname{RSOII}(G)=\prod_{u v \in E(G)} \sqrt{\left(d_{G}(u)-1\right)^{2}+\left(d_{G}(v)-1\right)^{2}}
$$

The multiplicative reduced modified Sombor index of a graph $G$ is defined as

$$
{ }^{m} \operatorname{RSOII}(G)=\prod_{u v \in E(G)} \frac{1}{\sqrt{\left(d_{G}(u)-1\right)^{2}+\left(d_{G}(v)-1\right)^{2}}} .
$$

The multiplicative reduced first and second $(a, b)-K A$ indices of a graph $G$ are defined as

$$
\begin{aligned}
& R K A_{a, b}^{1} I I(G)=\prod_{u v \in E(G)}\left[\left(d_{G}(u)-1\right)^{a}+\left(d_{G}(v)-1\right)^{a}\right]^{b} \\
& R K A_{a, b}^{2} I I(G)=\prod_{u v \in E(G)}\left[\left(d_{G}(u)-1\right)^{a}\left(d_{G}(v)-1\right)^{a}\right]^{b}
\end{aligned}
$$

Recently some reduced indices were studied in $[14,15,16]$ and also some multiplicative indices were studied in [ 17, $18,19,20,21,22]$.

In this paper, we compute the multiplicative Sombor index, multiplicative modified Sombor index, multiplicative reduced Sombor index, multiplicative reduced modified Sombor index, multiplicative first ( $a, b$ )-KA index, multiplicative reduced first $(a, b)-K A$ index of $H C_{5} C_{7}[p, q]$ and $S C_{5} C_{7}[p, q]$ nanotubes. For nanotubes, see [23].

## 2. Results For $\boldsymbol{H C}_{5} \boldsymbol{C}_{7}[p, q]$ NANOTUBES

 pentagons repeated alternately. The 2-dimensional lattice of nanotube $H C_{5} C_{7}[8,4]$ is shown in Figure 1.

Figure-1: 2-D lattice of $\mathrm{HC}_{5} \mathrm{C}_{7}[8,4]$ nanotube.
Let $G$ be the graph of a nanotube $H C_{5} C_{7}[p, q]$. By calculation, $G$ has $4 p q$ vertices and $6 p q-p$ edges. Also by calculation, there are two types of edges based on the degree of the vertices of each edge as given in Table 1.

| $d_{G}(u), d_{G}(v) \backslash u v \in E(G)$ | $(2,3)$ | $(3,3)$ |
| :---: | :---: | :---: |
| Number of edges | $4 p$ | $6 p q-5 p$ |

Table-1: Edge partition of $G$
In the following Theorem, we compute the general multiplicative first $(a, b)-K A$ index of a nanotue $H C_{5} C_{7}[p, q]$.

## V. R. Kulli*/ Multiplicative Sombor indices of Certain Nanotubes / IJMA- 12(3), March-2021.

Theorem 1: The general first $(a, b)-K A$ index of $H C_{5} C_{7}[p, q]$ nanotubes is given by

$$
K A_{a, b}^{1} I I\left(H C_{5} C_{7}[p, q]\right)=\left(2^{a}+3^{a}\right)^{4 b p} \times\left(2 \times 3^{a}\right)^{b(6 \mathrm{pq}-5 \mathrm{p})} .
$$

Proof: Let $G=H C_{5} C_{7}[p, q]$. By definition and by using Table 1, we deduce

$$
\begin{aligned}
K A_{a, b}^{1} I I\left(H C_{5} C_{7}[p, q]\right) & =\prod_{u v \in E(G)}\left[d_{G}(u)^{a}+d_{G}(v)^{a}\right]^{b} \\
& =\left(2^{a}+3^{a}\right)^{b 4 p} \times\left(3^{a}+3^{a}\right)^{b(6 p q-5 p)} \\
& =\left(2^{a}+3^{a}\right)^{4 b p} \times\left(2 \times 3^{a}\right)^{b(6 \mathrm{pq}-5 \mathrm{p})}
\end{aligned}
$$

Using Theorem 2, we establish the following results.
Corollary 1.1: The multiplicative Sombor index of $\mathrm{HC}_{5} C_{7}[p, q]$ is

$$
\operatorname{SOII}\left(H C_{5} C_{7}[p, q]\right)=13^{2 p} \times(\sqrt{18})^{(6 p q-5 p)}
$$

Corollary 1.2: The modified Sombor index of $\mathrm{HC}_{5} \mathrm{C}_{7}[p, q]$ is

$$
{ }^{m} \operatorname{SOII}\left(H C_{5} C_{7}[p, q]\right)=\left(\frac{1}{13}\right)^{2 p} \times\left(\frac{1}{\sqrt{18}}\right)^{6 p q-5 p}
$$

In the following Theorem, we determine the general multiplicative reduced first $(a, b)-K A$ index of $H C_{5} C_{7}[p, q]$.
Theorem 2: The general reduced first $(a, b)-K A$ index of $H C_{5} C_{7}[p, q]$ is given by

$$
R K A_{a, b}^{1} I I\left(H C_{5} C_{7}[p, q]\right)=\left(1+2^{a}\right)^{4 p b} \times\left(2 \times 2^{a}\right)^{b(6 p q-5 p)}
$$

Proof: Let $G=H C_{5} C_{7}[p, q]$. By definition and by using Table 1, we deduce

$$
\begin{aligned}
R K A_{a, b}^{1} I I\left(H C_{5} C_{7}[p, q]\right) & =\prod_{u v \in E(G)}\left[\left(d_{G}(u)-1\right)^{a}+\left(d_{G}(v)-1\right)^{a}\right]^{b} \\
& =\left((2-1)^{a}+(3-1)^{a}\right)^{b \times 4 p} \times\left((3-1)^{a}+(3-1)^{a}\right)^{b(6 p q-5 p)} \\
& =\left(1+2^{a}\right)^{4 p b} \times\left(2 \times 2^{a}\right)^{b(6 p q-5 p)} .
\end{aligned}
$$

The following results are obtained from Theorem 2 .

$$
\operatorname{RSOII}\left(H C_{5} C_{7}[p, q]\right)=5^{2 p} \times(\sqrt{8})^{(6 p q-5 p)}
$$

$$
{ }^{m} \operatorname{SOII}\left(H C_{5} C_{7}[p, q]\right)=\left(\frac{1}{5}\right)^{2 p} \times\left(\frac{1}{\sqrt{8}}\right)^{6 p q-5 p}
$$

## 2. RESULTS FOR $S C_{5} C_{7}[p, q]$ NANOTUBES

In this section, we focus on $S C_{5} C_{7}[p, q]$ nanotubes, in which $p$ is the number of heptagons in the first row and $q$ rows of vertices and edges are repeated alternately. The 2-dimensional lattice of nanotube $S C_{5} C_{7}[8,4]$ is shown in Figure 2.

Figure-2: 2-D lattice of nanotube $S C_{5} C_{7}[8,4]$

## V. R. Kulli*/ Multiplicative Sombor indices of Certain Nanotubes / IJMA- 12(3), March-2021.

Let $G$ be the graph of $S C_{5} C_{7}[p, q]$. By calculation, we obtain that $G$ has $4 p q$ vertices and $6 p q-p$ edges. Also by calculation, there are three types of edges based on the degree of end vertices of each edge as given in Table 2.

| $d_{G}(u), d_{G}(v) \backslash u v \in E(G)$ | $(2,2)$ | $(2,3)$ | $(3,3)$ |
| :---: | :---: | :---: | :---: |
| Number of edges | $q$ | $6 q$ | $6 p q-p-7 q$ |

Table-2: Edge partition of $G$
In the following theorem, we compute the general multiplicative first $(a, b)-K A$ index of $S C_{5} C_{7}[p, q]$.
Theorem 3: The general multiplicative first ( $a, b$ )- $K A$ index of $S C_{5} C_{7}[p, q]$ nanotubes is given by

$$
K A_{a, b}^{1} I I\left(S C_{5} C_{7}[p, q]\right)=\left(2 \times 2^{a}\right)^{b q} \times\left(2^{a}+3^{a}\right)^{6 b q} \times\left(2 \times 3^{a}\right)^{b(6 p q-p-7 q)}
$$

Proof: Let $G=S C_{5} C_{7}[p, q]$. By definition and Table 2, we deduce

$$
\begin{aligned}
K A_{a, b}^{1} I I\left(S C_{5} C_{7}[p, q]\right. & =\prod_{u v \in E(G)}\left[d_{G}(u)^{a}+d_{G}(v)^{a}\right]^{b} . \\
& =\left(2^{a}+2^{a}\right)^{b q} \times\left(2^{a}+3^{a}\right)^{b 6 q} \times\left(3^{a}+3^{a}\right)^{b(6 p q-p-7 q)} . \\
& =\left(2 \times 2^{a}\right)^{b q} \times\left(2^{a}+3^{a}\right)^{6 b q} \times\left(2 \times 3^{a}\right)^{b(6 p q-p-7 q)} .
\end{aligned}
$$

From Theorem 3, the following results are established.
Corollary 3.1: The multiplicative Sombor index of $S C_{5} C_{7}[p, q]$ is

$$
\operatorname{SOII}\left(S C_{5} C_{7}[p, q]\right)=(\sqrt{8})^{q} \times(\sqrt{13})^{6 q} \times(\sqrt{18})^{6 p q-p-7 q}
$$

Corollary 3.2: The multiplicative modified Sombor index of $S C_{5} C_{7}[p, q]$ is

$$
{ }^{m} \operatorname{SOII}\left(S C_{5} C_{7}[p, q]\right)=\left(\frac{1}{\sqrt{8}}\right)^{q} \times\left(\frac{1}{\sqrt{13}}\right)^{6 q} \times\left(\frac{1}{\sqrt{18}}\right)^{6 p q-p-7 q}
$$

In the following theorem, we determine the general multiplicative reduced first $(a, b)-K A$ index of $S C_{5} C_{7}[p, q]$.
Theorem 4: The general multiplicative reduced first $(a, b)-K A$ index of $S C_{5} C_{7}[p, q]$ is given by

$$
R K A_{a, b}^{1} I I\left(S C_{5} C_{7}[p, q]\right)=2^{b q} \times\left(1+2^{a}\right)^{b 6 q} \times\left(2 \times 2^{a}\right)^{b(6 p q-p-7 q)}
$$

Proof: Let $G=S C_{5} C_{7}[p, q]$. By definition and using Table 2, we obtain

$$
\begin{aligned}
& R K A_{a, b}^{1} I I\left(S C_{5} C_{7}[p, q]\right)=\prod_{u v \in E(G)}\left[\left(d_{G}(u)-1\right)^{a}+\left(d_{G}(v)-1\right)^{a}\right]^{b} . \\
& \quad=\left[(2-1)^{a}+(2-1)^{a}\right]^{b q} \times\left[(2-1)^{a}+(3-1)^{a}\right]^{b 6 q} \times\left[(3-1)^{a}+(3-1)^{a}\right]^{b(6 p q-p-7 q)} . \\
& \quad=2^{b q} \times\left(1+2^{a}\right)^{b 6 q} \times\left(2 \times 2^{a}\right)^{b(6 p q-p-7 q)} .
\end{aligned}
$$

From Theorem 4, we establish the following results.
Corollary 4.1: The multiplicative reduced Sombor index of $S C_{5} C_{7}[p, q]$ is

$$
\operatorname{RSOII}\left(S C_{5} C_{7}[p, q]\right)=(\sqrt{2})^{q} \times(5)^{3 q} \times(\sqrt{8})^{6 p q-p-7 q}
$$

Corollary 4.2: The multiplicative reduced modified Sombor index of $S C_{5} C_{7}[p, q]$ is

$$
{ }^{m} \operatorname{RSOII}\left(\mathrm{SC}_{5} C_{7}[p, q]\right)=\left(\frac{1}{\sqrt{2}}\right)^{q} \times\left(\frac{1}{5}\right)^{3 q} \times\left(\frac{1}{\sqrt{8}}\right)^{6 p q-p-7 q} .
$$

## 4. CONCLUSION

In this study, we have introduced the multiplicative Sombor index, multiplicative modified Sombor index, multiplicative reduced Sombor index, multiplicative reduced modified Sombor index, multiplicative first ( $a, b$ )- $K A$ index, multiplicative reduced first $(a, b)-K A$ index of a molecular graph. Also these multiplicative indices for $H C_{5} C_{7}$ $[p, q]$ and $S C_{5} C_{7}[p, q]$ nanotubes are computed.
