#### Abstract

A Graph $G=(V, E)$ with $p$ vertices and $q$ edges is called a Harmonic mean graph if it is possible to label the vertices $x \in V$ with distinct labels $f(x)$ from $1,2 \ldots q+1$ in such $a$ way that when each edge $e=u v$ is labeled with $f(u v)=$ $\left\lceil\frac{2 f(u) f(v)}{f(u)+f(v)}\right\rceil$ (or) $\left\lfloor\frac{2 f(u) f(v)}{f(u)+f(v)}\right\rfloor$, then the edge labels are distinct. In this case $f$ is called Harmonic Mean Labeling of G. In this paper we prove that $m C_{n}, m C_{n} \cup P_{k}, m C_{n} \cup C_{k}, m C_{n} \cup P C_{k}, n k_{3} \cup C_{m}, n k_{3} \cup P C_{m}, P_{m} \times P_{3}$ are Harmonic mean graphs. Also we prove that the graph obtained by joining two copies of cycle $C_{n}$ by a path of arbitrary length is a Harmonic mean graph.

Keywords: Graph, Harmonic mean graph, path, cycle, planar grid, union of graphs, mG.

## 1. INTRODUCTION

The graph considered here will be finite, undirected and simple. Terms not defined here are used in the sense of Harary [1]. The symbols $V(G)$ and $E(G)$ will denote the vertex set and edge set of a graph $G$. The square $G^{2}$ of a graph $G$ has $V\left(G^{2}\right)=V(G)$, with $u, v$ adjacent in $G^{2}$ whenever $d(u, v) \leq 2$ in $G$. The union of two graphs $G_{1}=\left(V_{1}, E_{1}\right)$ and $G_{2}=\left(V_{2}\right.$, $E_{2}$ ) is a graph $G=G_{1} \cup G_{2}$ with vertex set $V=V_{1} \cup V_{2}$ and edge set $E=E_{1} \cup E_{2}$. The Cartesian product of two graphs $G_{1}=$ $\left(V_{1} E_{1}\right)$ and $G_{2}=\left(V_{2}, E_{2}\right)$ is a graph $G=(V, E)=G_{1} \times G_{2}$ with $V=V_{1} \times V_{2}$ and two vertices $u=\left(u_{1}, u_{2}\right)$ and $v=\left(v_{1}, v_{2}\right)$ are adjacent in $G_{1} \times G_{2}$ whenever ( $u_{1}=v_{1}$ and $u_{2}$ is adjacent to $u_{2}$ or $u_{2}=v_{2}$ and $u_{1}$ is adjacent to $v_{1}$ ). The product $P_{m} \times P_{n}$ is called a planar grid and $\mathrm{P}_{\mathrm{m}} \times \mathrm{P}_{2}$ in called ladder graph. mG denotes the disjoint union of $m$ copies of the graph G . Let $\mathrm{G}_{1}$, $\mathrm{G}_{2} \ldots \mathrm{G}_{\mathrm{n}} \mathrm{n} \geq 2$ be n copies of a fixed graph G . The graph obtained by adding an edge between $\mathrm{G}_{i}$ and $\mathrm{G}_{i+1}, i=1,2 \ldots . . \mathrm{n}-1$ is a called path union of G [7].
S. Somasundaram and R. Ponraj introduced Mean labeling of Graphs in [2]. We introduced Harmonic Mean labeling of Graphs in [3] and studied their behavior in [4] and [5]. In this paper we discuss Harmonic mean labeling behavior for union of two graphs like $C_{m} \cup P_{n}, \mathrm{mC}_{n} \cup \mathrm{P}_{\mathrm{k}}, \mathrm{mC}_{\mathrm{n}} \cup \mathrm{C}_{\mathrm{k}}, \mathrm{mC}_{\mathrm{n}} \cup \mathrm{PC}_{\mathrm{k}}$ etc.

Here we shall use frequent reference to the following definition and theorems.
Definition 1.1: A Graph $G$ with $p$ vertices and $q$ edges is called a harmonic mean graph if it is possible to label the vertices $x \in \mathrm{~V}$ with distinct labels $\mathrm{f}(x)$ from $1,2 \ldots \mathrm{q}+1$ in such a way that when each edge $\mathrm{e}=\mathrm{uv}$ is labeled with
$\mathrm{f}(\mathrm{e}=\mathrm{uv})=\left\lceil\frac{2 f(u) f(v)}{f(u)+f(v)}\right\rceil$ (or) $\left\lfloor\frac{2 f(u) f(v)}{f(u)+f(v)}\right\rfloor$ then the edge labels are distinct. In this case f is called a Harmonic mean labeling of $G$.

Theorem 1.2[4]: $n K_{3}, \mathrm{nK}_{3} \cup \mathrm{P}_{\mathrm{m}}, \mathrm{m}>1, \mathrm{nk}_{3} \cup \mathrm{C}_{\mathrm{m}}, \mathrm{m} \geq 3$ are Harmonic mean graphs.
Theorem 1.3 [4]: $\mathrm{mC}_{4}, \mathrm{mC}_{4} \cup \mathrm{P}_{\mathrm{n}}, \mathrm{n}>1, \mathrm{mC}_{4} \cup \mathrm{C}_{\mathrm{n}}, \mathrm{n} \geq 3, \mathrm{nk}_{3} \cup \mathrm{mC}_{4}$ are Harmonic mean graphs.
Theorem 1.4 [3]: Ladders are Harmonic mean graphs.

## ${ }^{1}$ S. S. Sandhya* \& ${ }^{2}$ S. Somasundaram/ Further Results On Harmonic Mean Graphs/IJMA- 4(1), Jan.-2013.

Theorem 1.5 [6]: The graph $\mathrm{C}_{\mathrm{n}}{ }^{(2)}$ is a Harmonic mean graph.

## 2. MAIN RESULT

Theorem 2.1: $\mathrm{mC}_{\mathrm{n}}$ is a Harmonic mean graph.
Proof: Let the vertex set of $\mathrm{mC}_{\mathrm{n}}$ be $\mathrm{V}=\mathrm{V}_{1} \cup \mathrm{~V}_{2} \cup \ldots . . \cup \mathrm{V}_{\mathrm{m}}$ where $\mathrm{V}_{i}=\left\{\mathrm{v}_{i}, \mathrm{v}_{i}{ }^{2}, \mathrm{v}_{i}{ }^{3} \ldots . . \mathrm{v}_{i}^{\mathrm{m}}\right\}$. Now define a function $\mathrm{f}: \mathrm{V}\left(\mathrm{mC}_{\mathrm{n}}\right) \rightarrow\{1,2, \ldots, \mathrm{q}+1\}$ by $\mathrm{f}\left(\mathrm{v}_{i}^{\mathrm{j}}\right)=\mathrm{m}(\mathrm{i}-1)+\mathrm{j}, 1 \leq \mathrm{i} \leq \mathrm{m}, 1 \leq \mathrm{j} \leq \mathrm{n}$. If a and $\mathrm{a}+1$ are two integers, then the Harmonic mean lies between a and $\mathrm{a}+1, \mathrm{a}<\frac{2 a(\alpha+1)}{2 \alpha+1}<\mathrm{a}+1$.

Consider a graph with vertices $n_{i}-3, n_{i}-2, n_{i}-1, n_{i}$.

Figure: 1
For the edges joining the vertices $n_{i}-3$ and $n_{i}-2$ we may assign the edge label $n_{i}-3$. Similarly for the edge joining the vertices $n_{i}-2$ and $n_{i}-1$ we may assign the edge label $n_{i}-1$ and for the edge joining the vertices $n_{i}-1$ ad $n_{i}$ we may assign the edge label $n_{i}$.

Since $n_{i}-3<\frac{2 n_{i}\left(n_{i}-a\right)}{2 n_{i}-a}<n_{i}$, we may assign the edge label $n_{i}-2$ for the edges joining the vertices $n_{i}-3$ and $n_{i}$. Since $m C_{n}$ has distinct edge labels, it is a Harmonic Mean graph.

Example 2.2: The following figure shows the Harmonic mean labeling of $3 \mathrm{C}_{6}$.

Figure: 2
Now we investigate Harmonic mean labeling of union of $\mathrm{mC}_{\mathrm{n}}$ with path and cycle.
Theorem 2.3: $\mathrm{mC}_{\mathrm{n}} \cup \mathrm{P}_{\mathrm{k}}$ is a Harmonic mean graph for $\mathrm{m} \geq 1, \mathrm{n} \geq 3$ and $\mathrm{k}>1$.
Proof: Let the vertex set of $\mathrm{mC}_{\mathrm{n}}$ be $\mathrm{V}=\mathrm{V}_{1} \cup \mathrm{~V}_{2} \cup \ldots \cup \mathrm{~V}_{\mathrm{m}}$
where
$\mathrm{V}_{i}=\left\{\mathrm{v}_{i}{ }^{1}, \mathrm{v}_{i}{ }^{2}, \mathrm{v}_{i}^{3} \ldots . . \mathrm{v}_{i}^{\mathrm{n}}\right\}$ and the edge set be $\mathrm{E}=\mathrm{E}_{1} \cup \mathrm{E}_{2} \cup \ldots \cup \mathrm{E}_{\mathrm{m}}$
where
$\mathrm{E}_{i}=\left\{\mathrm{e}_{i}{ }^{1}, \mathrm{e}_{i}^{2}, \mathrm{e}_{i}^{3} \ldots \ldots . \mathrm{e}_{i}^{\mathrm{n}}\right\}$. Let $\mathrm{P}_{\mathrm{k}}$ be the path $\mathrm{u}_{1} \mathrm{u}_{2} \ldots . \mathrm{u}_{\mathrm{k}}$.
Define a function $\mathrm{f}: \mathrm{V}\left(\mathrm{mC}_{\mathrm{n}} \cup \mathrm{P}_{\mathrm{k}}\right) \rightarrow\{1,2, \ldots, \mathrm{q}+1\}$
by $\mathrm{f}\left(\mathrm{v}_{i}^{\mathrm{j}}\right)=\mathrm{n}(\mathrm{i}-1)+\mathrm{j}, 1 \leq i \leq \mathrm{m}, 1 \leq \mathrm{j} \leq \mathrm{n}$
$\mathrm{f}\left(\mathrm{u}_{\mathrm{k}}\right)=\mathrm{mn}+i, 1 \leq i \leq \mathrm{k}$.
Edge labels are shown below

## ${ }^{1}$ S. S. Sandhya* \& ${ }^{2}$ S. Somasundaram/ Further Results On Harmonic Mean Graphs/IJMA- 4(1), Jan.-2013.

The set of labels of the edges of $\mathrm{mC}_{\mathrm{n}}$ is $\{1,2,3 \ldots \mathrm{mn}\}$ and the set of labels of the edges of $\mathrm{P}_{\mathrm{k}}$ is $(\mathrm{mn}+1, m n+2 \ldots m n+\mathrm{k}-$ $1\}$.

Hence $\mathrm{mC}_{\mathrm{n}} \cup \mathrm{P}_{\mathrm{k}}$ is a Harmonic mean graph.
Example 2.4: A Harmonic mean labeling of $3 \mathrm{C}_{5} \cup \mathrm{P}_{7}$ is given below

Figure: 3
Next we have

Theorem 2.5: $\mathrm{mC}_{\mathrm{n}} \cup \mathrm{C}_{\mathrm{k}}$ is a Harmonic mean graph for $\mathrm{m} \geq 3$ and $\mathrm{k} \geq 3$.
Proof: Let $\mathrm{mC}_{\mathrm{n}}$ be m copies of the cycle $\mathrm{C}_{\mathrm{n}}$ and $\mathrm{C}_{\mathrm{k}}$ be cycle with k vertices. Let the vertex set of $\mathrm{mC}_{\mathrm{n}}$ be $\mathrm{V}=\mathrm{V}_{1} \cup \mathrm{~V}_{2} \cup \ldots \mathrm{~V}_{\mathrm{m}}$
where $\mathrm{V}_{i}=\left\{\mathrm{v}_{i}{ }^{1}, \mathrm{v}_{i}{ }^{2}, \ldots, \mathrm{v}_{i}^{\mathrm{n}}\right\}$ and the edge set be $\mathrm{E}=\mathrm{E}_{1} \cup \mathrm{E}_{2} \cup \ldots \mathrm{E}_{\mathrm{m}}$
where $\mathrm{E}_{i}=\left\{\mathrm{e}_{i}^{1}, \mathrm{e}_{i}{ }^{2}, \mathrm{e}_{i}^{3}, \ldots, \mathrm{e}_{i}^{\mathrm{n}}\right\}$.
Let $\mathrm{u}_{1} \mathrm{u}_{2} \ldots \mathrm{u}_{\mathrm{k}} \mathrm{u}_{1}$ be the cycle $\mathrm{C}_{\mathrm{k}}$.
Define a function $\mathrm{f}: \mathrm{V}\left(\mathrm{mC}_{\mathrm{n}} \cup \mathrm{C}_{\mathrm{k}}\right) \rightarrow\{1,2 \ldots \mathrm{q}+1\}$ by $\mathrm{f}\left(\mathrm{v}_{i}^{\mathrm{j}}\right)=\mathrm{n}(i-1)+\mathrm{j}, 1 \leq i \leq \mathrm{m}, 1 \leq i \leq \mathrm{m}$

$$
\mathrm{f}\left(\mathrm{u}_{\mathrm{i}}\right)=\mathrm{mn}+\mathrm{i}, 1 \leq i \leq \mathrm{k} .
$$

Hence $\mathrm{mC}_{\mathrm{n}} \mathrm{UC}_{\mathrm{k}}$ is a Harmonic mean graph.
Example 2.6: Harmonic mean labeling pattern of $3 \mathrm{C}_{5}{\cup C_{6}}$ is given in the following figure.

Figure: 4
The same argument as in Theorem 2.3 and Theorem 2.5 gives the following
Theorem 2.7: $\mathrm{mC}_{\mathrm{n}} \cup \mathrm{PC}_{\mathrm{k}}$ is a Harmonic mean graph for $\mathrm{n}, \mathrm{k} \geq 3$ and $\mathrm{m}, \mathrm{p}>1$. Now we have
Theorem 2.8: $\mathrm{nK}_{3} \cup m C_{\mathrm{p}}$, is a Harmonic mean graph for $\mathrm{p}>3$ and $\mathrm{n}, \mathrm{m}>1$
Proof: Let the vertex set of $n K_{3}$ be $V=V_{1} \cup V_{2} \cup \ldots \cup V_{n}$ where $V_{i}=\left\{v_{i}{ }^{1}, v_{i}{ }^{2}, v_{i}^{3}\right\}$.
Let the vertex set of $m C_{p}$ be $U=U_{1} \cup U_{2} \cup U_{3} \cup \ldots \cup U_{m}$ where $U_{k}=\left\{u_{k}{ }^{1}, \mathrm{u}_{\mathrm{k}}{ }^{2}, \ldots, \mathrm{u}_{\mathrm{k}}{ }^{\mathrm{n}}\right\}$.
Define a function $\mathrm{f}: \mathrm{V}\left(\mathrm{nk}_{3} \mathrm{UmC}_{\mathrm{n}}\right) \rightarrow\{1,2, \ldots, \mathrm{q}+1\}$ by $\mathrm{f}\left(\mathrm{v}_{i}^{\mathrm{j}}\right)=3(\mathrm{i}-1)+\mathrm{j}, 1 \leq i \leq \mathrm{n}, 1 \leq \mathrm{j} \leq 3$ and $\mathrm{f}\left(\mathrm{u}_{\mathrm{k}}{ }^{\mathrm{j}}\right)=\mathrm{p}(\mathrm{k}-1)+3 \mathrm{n}+\mathrm{l}$, $1 \leq k \leq \mathrm{m}, 1 \leq l \leq \mathrm{p}$.

Hence $n k_{3} \cup m C_{p}$ is a Harmonic mean graph.

## ${ }^{1}$ S. S. Sandhya* \& ${ }^{2}$ S. Somasundaram/ Further Results On Harmonic Mean Graphs/IJMA- 4(1), Jan.-2013.

Example 2.9: Harmonic mean labeling of $4 \mathrm{k}_{3} \cup 2 \mathrm{C}_{5}$ is given below

Figure: 5
Next we prove the following
Theorem 2.10: Two copies of cycle $C_{m}$ sharing a common edge is a Harmonic mean graph.
Proof: Let the cycle $C_{m}$ be $u_{1} u_{2} \ldots u_{m} u_{1}$. Consider two copies of cycle $C_{m}$.
Let $G$ be a graph obtained from two copies of cycle $C_{m}$ sharing common edge. Then $G$ has $2 n-2$ vertices and $2 n-1$ edges. Let us take $\mathrm{e}=\mathrm{u}_{\mathrm{m}-1} \mathrm{u}_{\mathrm{m}}$ be the common edge between two copies of $\mathrm{C}_{\mathrm{m}}$.

Define a function $\mathrm{f}: \mathrm{V}(\mathrm{G}) \rightarrow\{1,2, \ldots, \mathrm{q}+1\}$ by
$\mathrm{f}\left(\mathrm{u}_{\mathrm{i}}\right)=\mathrm{i}, 1 \leq i \leq \mathrm{m}-2$
$\mathrm{f}\left(\mathrm{u}_{\mathrm{m}}\right)=\mathrm{m}-1, \mathrm{f}\left(\mathrm{u}_{\mathrm{m}-1}\right)=\mathrm{m}$
$\mathrm{f}\left(\mathrm{v}_{\mathrm{i}}\right)=i+1, \mathrm{~m}+1 \leq i \leq 2 \mathrm{~m}-2$.
Hence G is a Harmonic mean graph.
The following example illustrates the above theorem.
The labeling pattern of two copies of $\mathrm{C}_{7}$ sharing a common edge is shown below.

Figure: 6
Now we investigate the Harmonic mean labeling of a planar grid for a particular case of n.
Theorem 2.11: The planar gird $P_{m} \times P_{3}$ is a Harmonic mean graph.
Proof: Let the vertex set of $P_{m} \times P_{3}$ be $V\left(P_{m} \times P_{3}\right)=\left\{\mathrm{a}_{\mathrm{ij}}: 1 \leq i \leq m, 1 \leq \mathrm{j} \leq 3\right\}$ and the edge set be
$\mathrm{E}\left(\mathrm{P}_{\mathrm{m}} \times \mathrm{P}_{3}\right)=\left(\mathrm{a}_{i(j-1)} \mathrm{a}_{\mathrm{ij}} ; 1 \leq i \leq \mathrm{m}, 2 \leq \mathrm{j} \leq 3\right\} \cup\left\{\mathrm{a}_{(\mathrm{i}-1)} \mathrm{a}_{\mathrm{ij}}: 2 \leq i \leq \mathrm{m}, 1 \leq \mathrm{j} \leq 3\right\}$
Define f: $\mathrm{V}\left(\mathrm{P}_{\mathrm{m}} \times \mathrm{P}_{3}\right) \rightarrow\{1,2 \ldots \mathrm{q}+1\}$
$\mathrm{f}\left(\mathrm{a}_{\mathrm{ij}}\right)=i, i=1,1 \leq \mathrm{j} \leq 3$
$\mathrm{f}\left(\mathrm{a}_{\mathrm{ij}}\right)=\mathrm{f}\left(\mathrm{a}_{(i-1) 3}\right)+2+\mathrm{j}, 2 \leq \mathrm{i} \leq \mathrm{m}, 1 \leq \mathrm{j} \leq \mathrm{n}, 1 \leq \mathrm{j} \leq 3$
Edges are labeled with
$f\left(a_{11} a_{21}\right)=1$
$\mathrm{f}\left(\mathrm{a}_{i j} \mathrm{a}_{i(\mathrm{j}+1)}\right)=5(\mathrm{i}-1)+\mathrm{j}+1, i=1,1 \leq \mathrm{j} \leq 2$
$\mathrm{f}\left(\mathrm{a}_{\mathrm{ij}} \mathrm{a}_{\mathrm{i}(\mathrm{j}+1)}\right)=5(\mathrm{i}-1)+\mathrm{j}, 2 \leq \mathrm{j} \leq \mathrm{m}, 1 \leq \mathrm{j} \leq 2$
$\mathrm{f}\left(\mathrm{a}_{\mathrm{ij}} \mathrm{a}_{i(j+1) \mathrm{j}}\right)=5(\mathrm{i}-1)+\mathrm{j}+2, \quad 1 \leq i \leq \mathrm{m}-1,1 \leq \mathrm{j} \leq 3$
Here all the edges are labeled with distinct labels.
Hence $P_{m} \times P_{3}$ is a Harmonic mean graph for $m \geq 2$.
Example 2.12: Harmonic mean labeling of $\mathrm{P}_{4} \times \mathrm{P}_{3}$ is shown in the following figure.

Figure: 7
Next we prove
Theorem 2.13: The graph obtained by joining two copies of cycle $C_{n}$ by a path $P_{m}$ is a Harmonic mean graph for all $m$ and $n$

Proof: Let $G$ be a graph obtained by joining two copies of cycle $C_{n}$ by a path $P_{m}$ Let $u_{1} u_{2} \ldots . u_{n}$ be the vertices of first copy of cycle $C_{n}$ and $v_{1} v_{2} \ldots . . v_{n}$ be the vertices of second copy of cycle $C_{n}$.

Let $\mathrm{P}_{\mathrm{m}}$ be the path $\mathrm{w}_{1} \mathrm{w}_{2} \ldots . . \mathrm{w}_{\mathrm{m}}$ with $\mathrm{u}_{1}=\mathrm{w}_{1}$ and $\mathrm{v}_{1}=\mathrm{w}_{\mathrm{m}}$
Define a function $\mathrm{f}: \mathrm{V}(\mathrm{G}) \rightarrow\{1,2 \ldots . \mathrm{q}+1\}$ by
$\mathrm{f}\left(\mathrm{u}_{i}\right)=i, 1 \leq i \leq \mathrm{n}$
$\mathrm{f}\left(\mathrm{v}_{1}\right)=\mathrm{n}+3$
$\mathrm{f}\left(\mathrm{v}_{\mathrm{i}}\right)=\mathrm{n}+3+i, 2 \leq i \leq \mathrm{n}$
$\mathrm{f}\left(\mathrm{w}_{1}\right)=\mathrm{n}$
$\mathrm{f}\left(\mathrm{w}_{\mathrm{j}}\right)=\mathrm{n}+\mathrm{j}-1,2 \leq \mathrm{j} \leq \mathrm{m}$
Hence $G$ is a Harmonic mean graph
Example 2.14: The following example shows the graph $G$ obtained by joining two copies of the cycle $C_{5}$ by a path $\mathrm{P}_{4}$.

Figure: 8
