#### Abstract

A graph $G$ is said to be one modulo three harmonic mean graph if there is a function $\varphi$ from the vertex set of $G$ to $\{1,3,4, \ldots, 3 q-2,3 q\}$ with $\varphi$ is one-one and $\varphi$ induces a bijection $\varphi^{*}$ from the edge set of $G$ to $\{1,4, \ldots, 3 q-2\}$, where $\varphi^{*}(e=u v)=\left\lceil\frac{2 \varphi(u) \varphi(v)}{\varphi(u)+\varphi(v)}\right]$ or $\left[\frac{2 \varphi(u) \varphi(v)}{\varphi(u)+\varphi(v)}\right\rfloor$ and the function $\varphi$ is called as one modulo three harmonic mean labeling of $G$. In this paper, we investicate one modulo three harmonic mean labeling for some graphs.

Key words: Graph, one modulo three harmonic mean labeling, one modulo three harmonic mean graph.

## 1. INTRODUCTION

We begin with simple, finite, connected and undirected graph $G(V, E)$ with $p$ vertices and $q$ edges. For a detailed survey of graph labeling we refer to Gallian[1]. For all other standared terminology and notations we follow Harary[2].
S. Somasundaram and R. Ponraj introduced mean labeling of graphs in [8]. S. Somasundaram and S.S Sandhya introduced the concept of harmonic mean labeling of graphs [6]. S.S Sandhya, C. Jayasekaran and C. David Raj investicated some new families of Harmonic mean Graphs in [4, 7]. V. Swaminathan and C. Sekar introduce the concept of one modulo three graceful labeling in [9]. C. David Raj, S.S Sandhya and C. Jayasekaran introduce the concept one modulo three harmonic mean labeling of graphs in [5] and investigated some of one modulo three harmonic mean graphs in [3].

We now give the following definitions which are useful for the present investigation.
Definition 1.1: A graph $G$ is said to be one modulo three harmonic mean graph if there is a function $\varphi$ from the vertex set of $G$ to $\{1,3,4, \ldots, 3 q-2,3 q\}$ with $\varphi$ is one-one and $\varphi$ induces a bijection $\varphi^{*}$ from the edge set of $G$ to $\{1,4, \ldots, 3 q$ $-2\}$, where $\varphi^{*}(\mathrm{e}=\mathrm{uv})=\left\lceil\frac{2 \varphi(u) \varphi(v)}{\varphi(u)+\varphi(v)}\right\rceil$ or $\left[\frac{2 \varphi(u) \varphi(v)}{\varphi(u)+\varphi(v)}\right\rceil$ and the function $\varphi$ is called as one modulo three harmonic mean labeling of G

Definition 1.2: A Qudrilateral snake $Q_{n}$ is obtained from a path $u_{1} u_{2} \ldots u_{n}$ by joining $u_{i}$ and $u_{i+1}$ to two new vertices $v_{i}$ and $w_{i}$ respectively and joining $v_{i}$ and $w_{i}$ for $1 \leq i \leq n-1$. That is, every edge of a path is replaced by a cycle $C_{4}$.

Definition 1.3: The corona $G_{1} \odot G_{2}$ of two graphs $G_{1}$ and $G_{2}$ is defined as the graph $G$ obtained by taking one copy of $G_{1}$ (which has $p_{1}$ vertices) and $p_{1}$ copies of $G_{2}$ and then joining the $i^{\text {th }}$ vertex of $G_{1}$ to every vertices in the $i^{\text {th }}$ copy of $G_{2}$.

Definition 1.4: The Cartesian product of two graphs $G_{1}=\left(V_{1}, E_{1}\right)$ and $G_{2}=\left(V_{2}, E_{2}\right)$ is a graph $G(V, E)$ with $\mathrm{V}=\mathrm{V}_{1} \times \mathrm{V}_{2}$ and two vertices $\mathrm{u}=\left(\mathrm{u}_{1}, \mathrm{u}_{2}\right)$ and $\mathrm{v}=\left(\mathrm{v}_{1}, \mathrm{v}_{2}\right)$ are adjacent in $\mathrm{G}_{1} \times \mathrm{G}_{2}$ whenever $\left(\mathrm{u}_{1}=\mathrm{v}_{1}\right.$ and $\mathrm{u}_{2}$ is adjacent to $v_{2}$ ) or ( $u_{2}=v_{2}$ and $u_{1}$ is adjacent to $v_{1}$ ). It is denoted by $G_{1} \times G_{2}$.

Definition 1.5: The product $P_{m} \times P_{n}$ is called a planar grid. The product $P_{n} \times K_{2}$ is called a ladder, and it is denoted by $\mathrm{L}_{\mathrm{n}}$.

## C. David Raj ${ }^{1}$ and C. Jayasekaran* ${ }^{2}$ /

Definition 1.6: Given two graphs $G_{1}$ and $G_{2}$, their union will be another graph $G$ such that $V\left(G_{1} \cup G_{2}\right)=V\left(G_{1}\right) \cup V\left(G_{2}\right)$ and $E\left(G_{1} \cup G_{2}\right)=E\left(G_{1}\right) \cup E\left(G_{2}\right)$.

## 2. ONE MODULO THREE HARMONIC MEAN GRAPHS

In this section, we prove that $Q_{n} \odot K_{1}, P_{m} \cup\left(P_{n} \odot K_{1}\right),\left(P_{m} \odot \bar{K}_{2}\right) \cup P_{n}$ and $G_{d}$ are one modulo three harmonic mean graphs.

Theorem 2.1: $\mathrm{Q}_{\mathrm{n}} \odot \mathrm{K}_{1}$ is one modulo three Harmonic mean graph.
Proof: Consider a path $u_{1} u_{2} \ldots u_{n}$. Join $u_{i}$ and $u_{i+1}$ to the vertices $v_{i}$ and $w_{i}$ respectively and then join $v_{i}$ and $\mathrm{w}_{\mathrm{i}}, 1 \leq \mathrm{i} \leq \mathrm{n}-1$. The resultant graph is $\mathrm{Q}_{\mathrm{n}}$. Join $\mathrm{u}_{\mathrm{i}}$ to $\mathrm{x}_{\mathrm{i}}, 1 \leq \mathrm{i} \leq \mathrm{n}, \mathrm{v}_{\mathrm{i}}$ to $\mathrm{y}_{\mathrm{i}}$ and $\mathrm{w}_{\mathrm{i}}$ to $\mathrm{z}_{\mathrm{i}}, 1 \leq \mathrm{i} \leq \mathrm{n}-1$. The resultant graph is $Q_{n} \odot K_{1}$ whose edge set is $\left.\left\{u_{i} u_{i+1}, u_{i} v_{i}, v_{i} y_{i}, v_{i} w_{i}, w_{i} z_{i}, u_{i+1} w_{i}\right\} / 1 \leq i \leq n-1\right\} \cup\left\{u_{i} x_{i} / 1 \leq i \leq n\right\}$. Define a function $\varphi: \mathrm{V}\left(\mathrm{Q}_{\mathrm{n}} \odot \mathrm{K}_{1}\right) \rightarrow\{1,3,4, \ldots, 3 \mathrm{q}-2,3 \mathrm{q}\}$ by

$$
\begin{aligned}
& \varphi\left(\mathrm{x}_{1}\right)=1 ; \varphi\left(\mathrm{x}_{2}\right)=24 ; \varphi\left(\mathrm{x}_{3}\right)=42 ; \varphi\left(\mathrm{x}_{4}\right)=63 ; \varphi\left(\mathrm{x}_{\mathrm{i}}\right)=21(\mathrm{i}-1)+3,5 \leq \mathrm{i} \leq \mathrm{n} ; \\
& \left.\varphi \mathrm{u}_{1}\right)=6 ; \varphi\left(\mathrm{u}_{2}\right)=21 ; \varphi\left(\mathrm{u}_{3}\right)=43 ; \varphi\left(\mathrm{u}_{4}\right)=64 ; \varphi\left(\mathrm{u}_{\mathrm{i}}\right)=21(\mathrm{i}-1), 5 \leq \mathrm{i} \leq \mathrm{n} ; \\
& \varphi\left(\mathrm{v}_{1}\right)=10 ; \varphi\left(\mathrm{v}_{2}\right)=30 ; \varphi\left(\mathrm{v}_{3}\right)=51 ; \varphi\left(\mathrm{v}_{\mathrm{i}}\right)=21(\mathrm{i}-1)+7,4 \leq \mathrm{i} \leq \mathrm{n}-1 ; \\
& \varphi\left(\mathrm{y}_{1}\right)=3 ; \varphi\left(\mathrm{y}_{2}\right)=31 ; \varphi\left(\mathrm{y}_{\mathrm{i}}\right)=21(\mathrm{i}-1)+6,3 \leq \mathrm{i} \leq \mathrm{n}-1 ; \\
& \varphi\left(\mathrm{w}_{1}\right)=16 ; \varphi\left(\mathrm{w}_{2}\right)=37 ; \varphi\left(\mathrm{w}_{3}\right)=58 ; \varphi\left(\mathrm{w}_{\mathrm{i}}\right)=21(\mathrm{i}-1)+18,4 \leq \mathrm{i} \leq \mathrm{n}-1 ; \\
& \varphi\left(\mathrm{z}_{\mathrm{i}}\right)=21 \mathrm{i}-6,1 \leq \mathrm{i} \leq \mathrm{n}-1 .
\end{aligned}
$$

Then $\varphi$ induces a bijective function $\varphi^{*}: \mathrm{E}(\mathrm{G}) \rightarrow\{1,4,7, \ldots, 3 \mathrm{q}-2\}$, where

$$
\begin{aligned}
& \varphi^{*}\left(\mathrm{u}_{1} \mathrm{u}_{2}\right)=10 ; \varphi^{*}\left(\mathrm{u}_{2} \mathrm{u}_{3}\right)=28 ; \varphi^{*}\left(\mathrm{u}_{\mathrm{i}} \mathrm{u}_{\mathrm{i}+1}\right)=21(\mathrm{i}-1)+10,3 \leq \mathrm{i} \leq \mathrm{n}-1 ; \\
& \varphi^{*}\left(\mathrm{u}_{\mathrm{i}} \mathrm{x}_{\mathrm{i}}\right)=21(\mathrm{i}-1)+1,1 \leq \mathrm{i} \leq \mathrm{n} ; \\
& \varphi^{*}\left(\mathrm{u}_{1} \mathrm{v}_{1}\right)=7 ; \varphi^{*}\left(\mathrm{u}_{\mathrm{i}} \mathrm{v}_{\mathrm{i}}\right)=21(\mathrm{i}-1)+4,2 \leq \mathrm{i} \leq \mathrm{n}-1 ; \\
& \varphi^{*}\left(\mathrm{v}_{1} \mathrm{y}_{1}\right)=4 ; \varphi^{*}\left(\mathrm{v}_{\mathrm{i}} \mathrm{y}_{\mathrm{i}}\right)=21(\mathrm{i}-1)+7,2 \leq \mathrm{i} \leq \mathrm{n}-1 ; \\
& \varphi^{*}\left(\mathrm{v}_{\mathrm{i}} \mathrm{~W}_{\mathrm{i}}\right)=21 \mathrm{i}-8,1 \leq \mathrm{i} \leq \mathrm{n}-1 ; \\
& \varphi^{*}\left(\mathrm{w}_{\mathrm{i}} \mathrm{z}_{\mathrm{i}}\right)=21 \mathrm{i}-5,1 \leq \mathrm{i} \leq \mathrm{n}-1 ; \\
& \varphi^{*}\left(\mathrm{u}_{\mathrm{i}}+\mathrm{W}_{\mathrm{i}}\right)=21 \mathrm{i}-2,1 \leq \mathrm{i} \leq \mathrm{n}-1 .
\end{aligned}
$$

In the view of the above labeling pattern $f$ provides one modulo three Harmonic mean labeling for $\mathrm{Q}_{\mathrm{n}} \odot \mathrm{K}_{1}$. Hence the theorem.

Example 2.2: One modulo three Harmonic mean labeling of $\mathrm{Q}_{7} \odot \mathrm{~K}_{1}$ is given in figure 2.1.

Figure-2.1: $\mathrm{Q}_{7} \odot \mathrm{~K}_{1}$
Theorem 2.3: $\mathrm{P}_{\mathrm{m}} \mathrm{U}\left(\mathrm{P}_{\mathrm{n}} \odot \mathrm{K}_{1}\right)$ is one modulo three harmonic mean graph.
Proof: Let $u_{1} u_{2} \ldots u_{n}$ be the path $P_{n}$ and let $v_{i}$ be the vertex which is joined to the vertex $u_{i}$ of the path $P_{n}, 1 \leq i \leq n$. The resultant graph is $P_{n} \odot K_{1}$. Let $s_{1} s_{2} \ldots s_{m}$ be the path $P_{m}$. Let $G=P_{m} \cup\left(P_{n} \odot K_{1}\right)$. Define a function $\varphi: V(G) \rightarrow\{1,3,4,6$, $\ldots, 3 q-2,3 q\}$ by
$\varphi\left(\mathrm{s}_{1}\right)=1 ; \varphi\left(\mathrm{s}_{\mathrm{i}}\right)=3(\mathrm{i}-1), 2 \leq \mathrm{i} \leq \mathrm{m}-1 ; \varphi\left(\mathrm{s}_{\mathrm{m}}\right)=3(\mathrm{~m}-1)-2 ;$
$\varphi\left(u_{i}\right)=3(m-1)+6 i-3$ for all odd $i$ and $i \leq n$;
$\varphi\left(u_{i}\right)=3(m-1)+6(i-1)$ for all even $i$ and $i \leq n$;
$\varphi\left(v_{i}\right)=3(m-1)+6(i-1)$ for all odd $i$ and $i \leq n$;
$\varphi\left(v_{i}\right)=3(m-1)+6(i-1)+3$ for all even $i$ and $i \leq n$.
Then $\varphi$ induces a bijective function $\varphi^{*}: \mathrm{E}(\mathrm{G}) \rightarrow\{1,4,7, \ldots, 3 \mathrm{q}-2\}$, where
$\varphi^{*}\left(\mathrm{~W}_{\mathrm{i}} \mathrm{W}_{\mathrm{i}+1}\right)=3 \mathrm{i}-2,1 \leq \mathrm{i} \leq \mathrm{n}-1 ;$
$\varphi^{*}\left(u_{i} u_{i+1}\right)=3(m-1)+6 i-2,1 \leq i \leq n-1 ;$
$\varphi^{*}\left(u_{i} v_{i}\right)=3(m-1)+6 i-5,1 \leq i \leq n$.

## Some More Results On One Modulo Three Harmonic Mean Graphs / IJMA- 6(3), March-2015.

Thus the edges get the distinct labels $1,4, \ldots, 3 q-2$. Therefore, $\varphi$ is one modulo three harmonic mean labeling. Hence $P_{m} \cup\left(P_{n} \odot K_{1}\right)$ is one modulo three harmonic mean graph.

Example 2.4: One modulo three Harmonic mean labeling of $\mathrm{P}_{7} \cup\left(\mathrm{P}_{6} \odot \mathrm{~K}_{1}\right)$ is given in figure 2.2.

Figure-2.2: $\mathrm{P}_{7} \cup\left(\mathrm{P}_{6} \odot \mathrm{~K}_{1}\right)$
Theorem 2.5: $\left(\mathrm{P}_{\mathrm{m}} \odot \overline{\mathrm{K}}_{2}\right) \cup \mathrm{P}_{\mathrm{n}}$ is one modulo three harmonic mean graph.
Proof: Let $u_{1} u_{2} \ldots u_{m}$ be the path $P_{m}$ and let $v_{i}, w_{i}$ be the vertices which are joined to the vertex $u_{i}$ of the path $P_{n}, 1 \leq i \leq m$. The resultant graph is $\left(P_{m} \odot \bar{K}_{2}\right)$. Let $x_{1} x_{2} \ldots x_{n}$ be the path $P_{n}$. Let $G=\left(P_{m} \odot \bar{K}_{2}\right) \cup P_{n}$. Define a function $\varphi: \mathrm{V}(\mathrm{G}) \rightarrow\{1,3,4,6, \ldots, 3 \mathrm{q}-2,3 \mathrm{q}\}$ by

$$
\varphi\left(\mathrm{v}_{1}\right)=1 ; \varphi\left(\mathrm{v}_{2}\right)=9 ; \varphi\left(\mathrm{v}_{\mathrm{i}}\right)=9(\mathrm{i}-1)-2,3 \leq \mathrm{i} \leq \mathrm{m} ;
$$

$\varphi\left(\mathrm{w}_{1}\right)=3 ; \varphi\left(\mathrm{w}_{2}\right)=12 ; \varphi\left(\mathrm{w}_{\mathrm{i}}\right)=9 \mathrm{i}-5,3 \leq \mathrm{i} \leq \mathrm{m}$;
$\varphi\left(\mathrm{u}_{1}\right)=4 ; \varphi\left(\mathrm{u}_{2}\right)=13 ; \varphi\left(\mathrm{u}_{\mathrm{i}}\right)=9 \mathrm{i}-6,3 \leq \mathrm{i} \leq \mathrm{m} ;$
$\varphi\left(\mathrm{x}_{\mathrm{i}}\right)=9 \mathrm{~m}+3(\mathrm{i}-1)-3,1 \leq \mathrm{i} \leq \mathrm{m}$.
Then $\varphi$ induces a bijective function $\varphi^{*}: \mathrm{E}(\mathrm{G}) \rightarrow\{1,4,7, \ldots, 3 q-2\}$, where

$$
\begin{aligned}
& \varphi^{*}\left(u_{i} v_{i}\right)=9(i-1)+1,1 \leq i \leq n ; \\
& \varphi^{*}\left(u_{i} w_{i}\right)=9(i-1)+4,1 \leq i \leq n ; \\
& \varphi^{*}\left(u_{i} u_{i+1}\right)=9(i-1)+7,1 \leq i \leq n-1 ; \\
& \varphi^{*}\left(x_{i} x_{i}\right)=9 m+3(i-1)-2,1 \leq i \leq n-1 .
\end{aligned}
$$

Thus the edges get the distinct labels $1,4, \ldots, 3 q-2$. Therefore, $\varphi$ is one modulo three harmonic mean labeling. Hence $\mathrm{P}_{\mathrm{m}} \cup\left(\mathrm{P}_{\mathrm{n}} \odot \mathrm{K}_{1}\right)$ is one modulo three harmonic mean graph.

Example 2.6: One modulo three Harmonic mean labeling of $\left(\mathrm{P}_{5} \odot \overline{\mathrm{~K}}_{2}\right) \cup \mathrm{P}_{7}$ is given in figure 2.3.

Figure-2.3: $\left(\mathrm{P}_{5} \odot \overline{\mathrm{~K}}_{2}\right) \cup \mathrm{P}_{7}$
Construction: Let $L_{n}=P_{n} \times K_{2}$ be the ladder graph. $V\left(L_{n}\right)=\left\{u_{i}, v_{i} / 1 \leq i \leq n\right\}$ and $E\left(L_{n}\right)=\left\{u_{i} u_{i+1}, v_{i} v_{i+1} / 1 \leq i \leq n-\right.$ $1\} \cup\left\{u_{i} v_{i} / 1 \leq i \leq n\right\}$. The graph obtained from $L_{n}$ by deleting the edge $u_{1} v_{1}$ is denoted by $G_{d}$.

Theorem 2.7: The graph $G_{d}$ is one modulo three harmonic mean graph.
Proof: Let $V\left(G_{d}\right)=\left\{u_{i}, v_{i} / 1 \leq i \leq n\right\}$. $E\left(G_{d}\right)=\left\{u_{i} u_{i+1}, v_{i} v_{i+1} / 1 \leq i \leq n-1\right\} \cup\left\{u_{i} v_{i} / 2 \leq i \leq n\right\}$. That is, $V\left(G_{d}\right)=V\left(L_{n}\right)$ and $E\left(G_{d}\right)=E\left(L_{n}\right)-\left\{u_{1} v_{1}\right\}$. Then $G_{d}$ has $2 n$ vertices and $3(n-1)$ edges. Define a function $\varphi: V\left(G_{d}\right) \rightarrow\{1,3,4, \ldots, 3 q$ $-2,3 q\}$ by

$$
\begin{aligned}
& \varphi\left(\mathrm{u}_{1}\right)=1 ; \varphi\left(\mathrm{u}_{2}\right)=9 ; \varphi\left(\mathrm{u}_{3}\right)=19 ; \varphi\left(\mathrm{u}_{\mathrm{i}}\right)=9(\mathrm{i}-1), 4 \leq \mathrm{i} \leq \mathrm{n} ; \\
& \varphi\left(\mathrm{v}_{1}\right)=3 ; \varphi\left(\mathrm{v}_{2}\right)=7 ; \varphi\left(\mathrm{v}_{\mathrm{i}}\right)=9(\mathrm{i}-1)-3,3 \leq \mathrm{i} \leq \mathrm{n} .
\end{aligned}
$$

## C. David Raj ${ }^{1}$ and C. Jayasekaran* ${ }^{2}$ /

## Some More Results On One Modulo Three Harmonic Mean Graphs / IJMA- 6(3), March-2015.

Then $\varphi$ induces a bijective function $\varphi^{*}: \mathrm{E}\left(\mathrm{G}_{\mathrm{d}}\right) \rightarrow\{1,4,7, \ldots, 3 \mathrm{q}-2\}$, where

$$
\begin{aligned}
& \varphi^{*}\left(\mathrm{u}_{1} \mathrm{u}_{2}\right)=1 ; \varphi^{*}\left(\mathrm{u}_{\mathrm{i}} \mathrm{u}_{\mathrm{i}+1}\right)=9(\mathrm{i}-1)+4,2 \leq \mathrm{i} \leq \mathrm{n}-1 ; \\
& \varphi^{*}\left(\mathrm{v}_{1} \mathrm{v}_{2}\right)=4 ; \varphi^{*}\left(\mathrm{v}_{\mathrm{i}} \mathrm{v}_{\mathrm{i}+1}\right)=9(\mathrm{i}-1)+1,2 \leq \mathrm{i} \leq \mathrm{n}-1 ; \\
& \varphi^{*}\left(\mathrm{u}_{\mathrm{i}} \mathrm{v}_{\mathrm{i}}\right)=9 \mathrm{i}-2,1 \leq \mathrm{i} \leq \mathrm{n} .
\end{aligned}
$$

Thus $\varphi$ provides one modulo three harmonic mean labeling for $G$. Hence $G_{d}$ is an one modulo three harmonic mean graph.

Example 2.8: One modulo three Harmonic mean labeling of $G_{d}$ when $n=7$ is given in figure 2.4.

Figure-2.4: $G_{d}$
