#### Abstract

Let $G(V, E)$ be a simple, finite, undirected connected graph. A non - empty set $S \subseteq V$ of a graph $G$ is a dominating set, if every vertex in $V-S$ is adjacent to atleast one vertex in $S$. A dominating set $S \subseteq V$ is called a locating dominating set, if for any two vertices $v, w \in V-S, N(v) \cap S \neq N(w) \cap S$. A locating dominating set $S \subseteq V$ is called a co - isolated locating dominating set, if there exists atleast one isolated vertex in $\langle V-S\rangle$. The co-isolated locating domination number $\gamma_{\text {cild }}$ is the minimum cardinality of a co - isolated locating dominating set. The number of minimum co isolated locating dominating sets in a graph $G$ is denoted by $\gamma_{\text {Dcild }}(G)$. In this paper, the number $\gamma_{\text {Dcild }}$ is obtained for a Path $P_{n}$, where $n \geq 3$.

Keywords: Dominating set, locating dominating set, co - isolated locating dominating set.

## 1. INTRODUCTION

Let $G=(V, E)$ be a simple graph of order $n$. For $v \in V(G)$, the neighborhood $N_{G}(v)$ (or simply $N(v)$ ) of $v$ is the set of all vertices adjacent to v in G . The concept of domination in graphs was introduced by Ore [7]. A nonempty set $S \subseteq V(G)$ of a graph $G$ is a dominating set, if every vertex in $V(G)-S$ is adjacent to some vertex in $S$. A special case of dominating set $S$ is called a locating dominating set. It was defined by D. F. Rall and P. J. Slater in [8]. A dominating set $S$ in a graph G is called a locating dominating set in $G$, if for any two vertices $v, w \in V(G)-S, N_{G}(v) \cap S$, $\mathrm{N}_{\mathrm{G}}(\mathrm{w}) \cap \mathrm{S}$ are distinct. The location dominating number of G is defined as the minimum number of vertices in a locating dominating set in $G$. A locating dominating set $S \subseteq V(G)$ is called a co - isolated locating dominating set , if $<\mathrm{V}-\mathrm{S}>$ contains atleast one isolated vertex. The minimum cardinality of a co - isolated locating dominating set is called the co - isolated locating domination number and is denoted by $\gamma_{\text {cild }}(G)$. The number of minimum co - isolated locating dominating sets in a graph $G$ is denoted by $\gamma_{\text {Dcild }}(G)$. In this paper, the minimum number $\gamma_{\text {Dcild }}$ of co-isolated locating dominating sets of Path $P_{n}$ on $n$ vertices, $n \geq 3$, is obtained

## 2. PRIOR RESULTS

The following results are obtained in [3] \& [4]
Theorem: 2.1 [3] For every non - trivial simple connected graph G, $1 \leq \gamma_{\text {cild }}(G) \leq n-1$.
Theorem: $2.2[3] \gamma_{\text {cild }}(G)=1$ if and only if $G \cong K_{2}$.
Theorem: 2.3 [3] $\gamma_{\text {cild }}\left(K_{n}\right)=n-1$, where $K_{n}$ is a complete graph on $n$ vertices.

Theorem: $2.4[3] \gamma_{\text {cild }}\left(K_{n}-e\right)=n-1$, where $e \in E\left(K_{n}\right)$

Observation: 2.1 [4] If $S$ is an co - isolated locating dominating set of $G(V, E)$ with $|S|=k$, then $V(G)-S$ contains atmost $\mathrm{nC}_{1}+\mathrm{nC}_{2}+\ldots+\mathrm{nC}_{\mathrm{k}}$ vertices.

> J. J. College of Arts and Science, Pudukkottai - 622 422, India.

Theorem: 2.5 [4] If $P_{n}$ is a path on $n$ vertices, $n \geq 3$, then
$\gamma_{\text {cild }}\left(\mathrm{P}_{\mathrm{n}}\right)=\left\{\begin{array}{l}\left\lfloor\frac{2 n}{5}\right\rfloor \quad ; n \equiv 0(\bmod 5) \\ 2\left\lfloor\frac{n}{5}\right\rfloor+1 ; n \equiv 1 \operatorname{or} 2(\bmod 5) \\ 2\left\lfloor\frac{n}{5}\right\rfloor+2 ; n \equiv 3 \operatorname{or} 4(\bmod 5)\end{array}\right.$

## 3. MAIN RESULTS

Using the value of $\gamma_{\text {cild }}\left(\mathrm{P}_{\mathrm{n}}\right)$ given in Theorem 2.5., the minimum number of co-isolated locating dominating sets $\gamma_{\text {Dcild }}$ $\left(P_{n}\right)$ of $P_{n}$, for all $n \geq 3$, are found in this section.

Observation: 3.1Let $V\left(P_{n}\right)=\left\{\mathrm{v}_{1}, \mathrm{v}_{2}, \ldots, \mathrm{v}_{\mathrm{n}}\right\}$ with $\operatorname{deg}\left(\mathrm{v}_{1}\right)=\operatorname{deg}\left(\mathrm{v}_{\mathrm{n}}\right)=1$ and $\operatorname{deg}\left(\mathrm{v}_{2}\right)=\operatorname{deg}\left(\mathrm{v}_{3}\right)=\ldots=\operatorname{deg}\left(\mathrm{v}_{\mathrm{n}-1}\right)=2$ and let D be a minimum co - isolated locating dominating set of $\mathrm{P}_{\mathrm{n}}$. Then one of the following holds.
(i) $v_{1}, v_{n} \in D$
(ii) $\mathrm{v}_{1}, \mathrm{v}_{\mathrm{n}-1} \in \mathrm{D}$
(iii) $v_{2}, v_{n} \in D$
(iv) $\mathrm{v}_{2}, \mathrm{v}_{\mathrm{n}-1} \in \mathrm{D}$

It is sufficient to consider (i), (iii) and (iv), since the number of minimum co - isolated locating dominating sets of $P_{n}$ containing $\mathrm{v}_{2}$ and $\mathrm{v}_{\mathrm{n}}$ is same as that of minimum co - isolated locating dominating sets containing $\mathrm{v}_{1}$ and $\mathrm{v}_{\mathrm{n}-1}$.

Theorem: 3.2 For any integer $n \geq 1, \gamma_{\text {Dcild }}\left(P_{5 n}\right)=1$.
Proof: Let the labellings of vertices of $P_{5 n}$ be $v_{1}, v_{2}, v_{3}, \ldots, v_{5 n-1}, v_{5 n}$. Let $D$ be a minimum co - isolated locating dominating set of $P_{5 n}$. The theorem is proved by the method of induction on $n$. For $n=1$, the following cases arise.
(i) If $\mathrm{v}_{1}, \mathrm{v}_{5} \in \mathrm{D}$, then $\mathrm{D}=\left\{\mathrm{v}_{1}, \mathrm{v}_{3}, \mathrm{v}_{5}\right\}$ and $|\mathrm{D}|=3$. But $\gamma_{\text {cild }}\left(\mathrm{P}_{5}\right)=2$. Therefore, D cannot be a minimum coisolated locating dominating set of $P_{5}$.
(ii) If $\mathrm{v}_{2}, \mathrm{v}_{5} \in \mathrm{D}$, then $\mathrm{D}=\left\{\mathrm{v}_{2}, \mathrm{v}_{3}, \mathrm{v}_{5}\right\}$ or $\left\{\mathrm{v}_{2}, \mathrm{v}_{4}, \mathrm{v}_{5}\right\}$, which is also not possible.
(iii) If $\mathrm{v}_{2}, \mathrm{v}_{4} \in \mathrm{D}$, then $\mathrm{D}=\left\{\mathrm{v}_{2}, \mathrm{v}_{4}\right\}$ is the only minimum co - isolated locating dominating set of $\mathrm{P}_{5}$ and $|\mathrm{D}|=2$ and hence $\gamma_{\text {Dcild }}\left(\mathrm{P}_{5}\right)=1$.

Similarly for $n=2, D=\left\{\mathrm{v}_{2}, \mathrm{v}_{4}, \mathrm{v}_{7}, \mathrm{v}_{9}\right\}$ is the only minimum co - isolated locating dominating set of $\mathrm{P}_{10}$ and $|\mathrm{D}|=4$ and hence $\gamma_{\text {Dcild }}\left(\mathrm{P}_{10}\right)=1$. Assume that the theorem holds when $\mathrm{n}=\mathrm{k}-1$. That is, the result holds for all paths having $5(k-1)$ vertices. Therefore, $D=\left\{v_{2}, v_{4}, v_{7}, v_{9}, \ldots, v_{5 k-8}, v_{5 k-6}\right\}$ is the only minimum co - isolated locating dominating set of $\mathrm{P}_{5(\mathrm{k}-1)}$ with $|\mathrm{D}|=2(\mathrm{k}-1)$ and $\gamma_{\text {Dcild }}\left(\mathrm{P}_{5(\mathrm{k}-1)}\right)=1$. Let $\mathrm{n}=\mathrm{k}$. Consider the path $\mathrm{P}_{5 \mathrm{k}}$ on 5 k vertices. Let $\mathrm{D}^{\prime}=\mathrm{D}$ $\mathrm{U}\left\{\mathrm{v}_{5 \mathrm{k}-3}, \mathrm{v}_{5 \mathrm{k}-1}\right\}$ is a co - isolated locating dominating set of $\mathrm{P}_{5 \mathrm{n}}$. Also, $\left|\mathrm{D}^{\prime}\right|=|\mathrm{D}|+2=2 \mathrm{k}$. Therefore, $\mathrm{D}^{\prime}$ is the only minimum co - isolated locating dominating set of $P_{5 k}$. It can be proved that, if $v_{1}, v_{5 k} \in D^{\prime}$ or $v_{2}, v_{5 k} \in D^{\prime}$, then $D^{\prime}$ will not be a minimum co - isolated locating dominating set of $\mathrm{P}_{5 \mathrm{k}}$. Therefore, $\mathrm{D}^{\prime}$ is the unique $\gamma_{\text {cild }}-$ set of $\mathrm{P}_{5 \mathrm{k}}$. Hence, $\gamma_{\text {Dcild }}\left(\mathrm{P}_{5 \mathrm{k}}\right)=1$.

By induction hypothesis, $\gamma_{\text {Dcild }}\left(\mathrm{P}_{5 n}\right)=1$, for $\mathrm{n} \geq 1$.

Theorem: 3.3 There are exactly $n+1$ minimum co - isolated locating dominating sets of $P_{5 n+1}$ containing $v_{1}$ and $v_{5 n+1}$ with the labellings $\mathrm{v}_{1}, \mathrm{v}_{2}, \mathrm{v}_{3}, \ldots, \mathrm{v}_{5 \mathrm{n}-1}, \mathrm{v}_{5 \mathrm{n}}, \mathrm{v}_{5 \mathrm{n}+1}$ where $\mathrm{n} \geq 1$.

Proof: Let the labellings of vertices of $\mathrm{P}_{5 \mathrm{n}+1}$ be $\mathrm{v}_{1}, \mathrm{v}_{2}, \mathrm{v}_{3}, \ldots, \mathrm{v}_{5 \mathrm{n}-1}, \mathrm{v}_{5 \mathrm{n}}, \mathrm{v}_{5 \mathrm{n}+1}$. The Theorem is proved by the method of induction on n . For $\mathrm{n}=1, D_{1}=\left\{\mathrm{v}_{1}, \mathrm{v}_{3}, \mathrm{v}_{6}\right\}$ and $D_{2}=\left\{\mathrm{v}_{1}, \mathrm{v}_{4}, \mathrm{v}_{6}\right\}$ are the only minimum co - isolated locating dominating sets of $\mathrm{P}_{6}$ containing $\mathrm{v}_{1}$ and $\mathrm{v}_{6}$ since, $\left|D_{1}\right|=\left|D_{2}\right|=3=2\left\lfloor\frac{5 n+1}{5}\right\rfloor+1$, (Theorem 2.5.).

For $\mathrm{n}=2, \mathrm{D}_{1}=\left\{\mathrm{v}_{1}, \mathrm{v}_{3}, \mathrm{v}_{6}, \mathrm{v}_{8}, \mathrm{v}_{11}\right\}, \mathrm{D}_{2}==\left\{\mathrm{v}_{1}, \mathrm{v}_{4}, \mathrm{v}_{6}, \mathrm{v}_{8}, \mathrm{v}_{11}\right\}$ and $D_{3}=\left\{\mathrm{v}_{1}, \mathrm{v}_{4}, \mathrm{v}_{6}, \mathrm{v}_{9}, \mathrm{v}_{11}\right\}$ are the only minimum co isolated locating dominating sets of $\mathrm{P}_{11}$ containing $\mathrm{v}_{1}$ and $\mathrm{v}_{11}$, since $\left|\mathrm{D}_{1}\right|=\left|\mathrm{D}_{2}\right|=\left|\mathrm{D}_{3}\right|=5=2\left[\frac{5 n+1}{5}\right]+1$. Therefore, the result is true for $\mathrm{n}=1$ and $\mathrm{n}=2$. Assume that the theorem holds when $\mathrm{n}=\mathrm{k}-1$. That is, the result holds for all paths having $5(\mathrm{k}-1)+1$ vertices. Let $\mathrm{D}_{1}, D_{2}, \mathrm{D}_{3}, \ldots ., \mathrm{D}_{\mathrm{k}}$ be the only k minimum co - isolated locating dominating sets of $\mathrm{P}_{5(\mathrm{k}-1)+1}$ containing $\mathrm{v}_{1}$ and $\mathrm{v}_{5 \mathrm{k}-4}$ with $\left|D_{\mathrm{i}}\right|=2\left[\frac{5(k-1)+1}{5}\right]+1$. Let $\mathrm{n}=\mathrm{k}$. Consider the path $\mathrm{P}_{5 \mathrm{k}+1}$.

Then $D_{i}{ }^{\prime}=D_{\mathrm{i}} \cup\left\{\mathrm{v}_{5 \mathrm{k}-2}, \mathrm{v}_{5 \mathrm{k}+1}\right\} ; \mathrm{i}=1,2,3, \ldots, \mathrm{k}$ are the minimum co - isolated locating dominating sets of $\mathrm{P}_{5 \mathrm{k}}$ since, $\left|D_{i}{ }^{\prime}\right|=\left|D_{\mathrm{i}}\right|+2=2\left[\frac{5 k}{5}\right]+1$.

## S. Muthammai, N. MeenaI* / The Number Of Minimum Co - Isolated Locating Dominating Sets Of Paths / IJMA- 6(5), May-2015.

In addition, $D_{k+1}{ }^{\prime}=\left\{\mathrm{v}_{1}, \mathrm{v}_{4}, \mathrm{v}_{6}, \mathrm{v}_{9}, \mathrm{v}_{11}, \ldots, \mathrm{v}_{5 \mathrm{k}-1}, \mathrm{v}_{5 \mathrm{k}+1}\right\}$ is also a minimum co - isolated locating dominating sets of $\mathrm{P}_{5 \mathrm{k}+1}$ containing $\mathrm{v}_{1}$ and $\mathrm{v}_{5 \mathrm{k}+1}$ such that $D_{k+1}{ }^{\prime} \neq D_{i}{ }^{\prime} ; \mathrm{i}=1,2,3, \ldots, \mathrm{k}$. Therefore, there are $\mathrm{k}+1$ minimum co - isolated locating dominating sets of $\mathrm{P}_{5 \mathrm{k}+1}$ containing $\mathrm{v}_{1}$ and $\mathrm{v}_{5 \mathrm{k}+1}$. By induction hypothesis, there are exactly $\mathrm{n}+1$ minimum co - isolated locating dominating sets of $P_{5 n+1}$ containing $v_{1}$ and $v_{5 n+1}$ with the labellings $v_{1}, v_{2}, v_{3}, \ldots, v_{5 n-1}, v_{5 n}, v_{5 n+1}$, for all $n \geq 1$.

Theorem: 3.4 There are exactly $\frac{n(n+3)}{2}$ minimum co - isolated locating dominating sets of $P_{5 n+1}$ containing $v_{1}$ and $v_{5 n}$ with the labellings $\mathrm{v}_{1}, \mathrm{v}_{2}, \mathrm{v}_{3}, \ldots, \mathrm{v}_{5 \mathrm{n}-1}, \mathrm{v}_{5 \mathrm{n}}, \mathrm{v}_{5 \mathrm{n}+1}$, where $\mathrm{n} \geq 1$.

Proof: Let the labellings of vertices of $P_{5 n+1}$ be $v_{1}, v_{2}, v_{3}, \ldots, v_{5 n-1}, v_{5 n}, v_{5 n+1}$. The theorem is proved by the method of induction on n .

For $\mathrm{n}=1$, the sets $A_{11}=\left\{\mathrm{v}_{1}, \mathrm{v}_{3}, \mathrm{v}_{5}\right\}$ and $A_{12}=\left\{\mathrm{v}_{1}, \mathrm{v}_{4}, \mathrm{v}_{5}\right\}$ are the only minimum co - isolated locating dominating sets of $\mathrm{P}_{6}$ containing $\mathrm{v}_{1}$ and $\mathrm{v}_{5}$ since, $\left|A_{11}\right|=\left|A_{12}\right|=3=2\left[\frac{5 n+1}{5}\right]+1$, (Theorem 2.5).

Let $\mathcal{D}_{1}=\left\{A_{1,1}, A_{1,2}\right\}$ and $\left|\mathcal{D}_{1}\right|=2=\frac{n(n+3)}{2}$, where $\mathrm{n}=1$.
Let $\mathrm{n}=2$. In order to construct the minimum co - isolated locating dominating sets of $\mathrm{P}_{11}$ containing $\mathrm{v}_{1}$ and $\mathrm{v}_{10}$, the following sets are defined using $A_{1,1}$ and $A_{1,2}$.

Let $A_{2,1}=A_{1,1} \cup\left\{\mathrm{v}_{8}, \mathrm{v}_{10}\right\} ; A_{2,2}=A_{1,2} \cup\left\{\mathrm{v}_{8}, \mathrm{v}_{10}\right\}$ and $B_{2,1}=\left(A_{1,1}-\left\{\mathrm{v}_{5}\right\}\right) \cup\left\{\mathrm{v}_{6,} \mathrm{v}_{8}, \mathrm{v}_{10}\right\}$; $B_{2,2}=\left(A_{1,2}-\left\{\mathrm{v}_{5}\right\}\right) \cup\left\{\mathrm{v}_{6}, \mathrm{v}_{8}, \mathrm{v}_{10}\right\} ; B_{2,3}=\left(A_{1,2}-\left\{\mathrm{v}_{5}\right\}\right) \cup\left\{\mathrm{v}_{6}, \mathrm{v}_{9}, \mathrm{v}_{10}\right\}$.

These are the only minimum co - isolated locating dominating sets of $\mathrm{P}_{11}$ containing $\mathrm{v}_{1}$ and $\mathrm{v}_{10}$ since, $\left|A_{2,1}\right|=\left|A_{2,2}\right|=\left|B_{2,1}\right|=\left|B_{2,2}\right|=\left|B_{2,3}\right|=5=2\left[\frac{5 n+1}{5}\right\rfloor+1$.

Let $\mathcal{D}_{2}=\left\{A_{2,1}, A_{2,2}, B_{2,1}, B_{2,2}, B_{2,3}\right\}$ and $\left|\mathcal{D}_{2}\right|=5=\frac{n(n+3)}{2}$, where $\mathrm{n}=2$.
Let $n=3$. In order to construct the minimum co - isolated locating dominating sets of $P_{16}$ containing $v_{1}$ and $v_{15}$, the following sets are defined using the sets in $\mathcal{D}_{2}$.

```
Let \(A_{3,1}=A_{2,1} \cup\left\{\mathrm{v}_{13}, \mathrm{v}_{15}\right\} ; A_{3,2}=A_{2,2} \cup\left\{\mathrm{v}_{13}, \mathrm{v}_{15}\right\} ; A_{33}=B_{2,1} \cup\left\{\mathrm{v}_{13}, \mathrm{v}_{15}\right\}\);
    \(A_{3,4}=B_{2,2} \cup\left\{\mathrm{v}_{13}, \mathrm{v}_{15}\right\} ; A_{3,5}=B_{2,3} \cup\left\{\mathrm{v}_{13}, \mathrm{v}_{15}\right\}\) and \(B_{3,1}=\left(B_{2,1}-\left\{\mathrm{v}_{10}\right\}\right) \cup\left\{\mathrm{v}_{11}, \mathrm{v}_{13}, \mathrm{v}_{15}\right\} ;\)
    \(B_{3,2}=\left(B_{2,2}-\left\{\mathrm{v}_{10}\right\}\right) \cup\left\{\mathrm{v}_{11}, \mathrm{v}_{13}, \mathrm{v}_{15}\right\} ; B_{3,3}=\left(B_{2,3}-\left\{\mathrm{v}_{10}\right\}\right) \cup\left\{\mathrm{v}_{11}, \mathrm{v}_{13}, \mathrm{v}_{15}\right\} ;\)
    \(B_{3,4}=\left(B_{2,3}-\left\{\mathrm{v}_{10}\right\}\right) \cup\left\{\mathrm{v}_{11}, \mathrm{v}_{14}, \mathrm{v}_{15}\right\}\).
```

These are the only minimum co - isolated locating dominating sets of $\mathrm{P}_{16}$ containing $\mathrm{v}_{1}$ and $\mathrm{v}_{15}$ since, $\left|A_{3, \mathrm{i}}\right|=\left|B_{2, \mathrm{j}}\right|=7=2\left\lfloor\frac{5 n+1}{5}\right\rfloor+1 ; \mathrm{i}=1,2,3,4,5$ and $\mathrm{j}=1,2,3,4$.

Let $\mathcal{D}_{3}=\left\{A_{3,1}, A_{3,2}, A_{3,3}, A_{3,4}, A_{3,5}, B_{3,1}, B_{3,2}, B_{3,3}, B_{3,4}\right\}$ and $\left|\mathcal{D}_{3}\right|=9=\frac{n(n+3)}{2}$, where $\mathrm{n}=3$. Therefore, the result is true for $\mathrm{n}=1$, 2 and 3 . Let $\mathrm{n}=\mathrm{k}-1$. Assume that the theorem holds for all paths having $5(\mathrm{k}-1)+1$ vertices. Let $\mathcal{D}_{\mathrm{k}-1}$ be the set of all minimum co - isolated locating dominating sets of $P_{5(k-1)+1}$ containing $v_{1}$ and $v_{5(n-1)}$.

Then, $\mathcal{D}_{\mathrm{k}-1}=\left\{A_{(\mathrm{k}-1), 1}, A_{(\mathrm{k}-1), 2}, A_{(\mathrm{k}-1), 3}, \ldots, A_{(\mathrm{k}-1), \mathrm{r}}, B_{(\mathrm{k}-1), 1}, B_{(\mathrm{k}-1), 2}, \ldots, B_{(\mathrm{k}-1), \mathrm{s}}\right\}$, where $\mathrm{r}=\frac{(k-2)(k+1)}{2}$, $\mathrm{s}=\mathrm{k}, \mathrm{k} \geq 3$.
Also, $\left|\mathcal{D}_{\mathrm{k}-1}\right|=\mathrm{r}+\mathrm{s}=\frac{(k-1)(k+2)}{2}=\frac{n(n+3)}{2}$, where $\mathrm{n}=\mathrm{k}-1$. and $\left|A_{(\mathrm{k}-1), \mathrm{i}}\right|=\left|B_{(\mathrm{k}-1), \mathrm{j}}\right|=2\left[\frac{5(k-1)+1}{5}\right]+1 ; \mathrm{i}=1,2, \ldots, \mathrm{r}$ and $j=1,2, \ldots$, s. Let $n=k$. In order to construct the minimum co - isolated locating dominating set of $P_{5 k+1}$ containing $v_{1}$ and $\mathrm{v}_{5 \mathrm{k}}$, the following sets are defined using the sets in $\mathcal{D}_{\mathrm{k}-1}$.

Let $\mathcal{D}_{\mathrm{k}}$ be the set of all minimum co - isolated locating dominating sets of $\mathrm{P}_{5 \mathrm{k}+1}$ containing $\mathrm{v}_{1}$ and $\mathrm{v}_{5 \mathrm{k}}$.
Then, $\mathcal{D}_{\mathrm{n}}=\left\{A_{\mathrm{k}, 1}, A_{\mathrm{k}, 2}, A_{\mathrm{k}, 3}, \ldots, A_{k, \ell}, B_{\mathrm{k}, 1,}, B_{\mathrm{k}, 2}, \ldots, B_{\mathrm{k}, \mathrm{m}}\right\}$,
where $\ell=\frac{(k-1)(k+2)}{2}$,
$\mathrm{m}=\mathrm{k}+1(\mathrm{k} \geq 2)$ and
$A_{k, i}=A_{(k-1), i} \cup\left\{\mathrm{v}_{5 \mathrm{k}-2}, \mathrm{v}_{5 \mathrm{k}}\right\}, \mathrm{i}=1,2, \ldots, \ell-k$, and
$A_{k, j}=B_{(k-1),(j-r)} \cup\left\{\mathrm{v}_{5 \mathrm{k}-2}, \mathrm{v}_{5 \mathrm{k}}\right\}, \mathrm{j}=(\ell-k+1),(\ell-k+2), \ldots, \ell$.
$B_{\mathrm{k}, \mathrm{i}}=\left(B_{(\mathrm{k}-1), \mathrm{i}}-\left\{\mathrm{v}_{5 \mathrm{k}-5}\right\}\right) \cup\left\{\mathrm{v}_{5 \mathrm{k}-4}, \mathrm{v}_{5 \mathrm{k}-2}, \mathrm{v}_{5 \mathrm{k}}\right\} ; \mathrm{i}=1,2, \ldots, \mathrm{~m}-1$ and $B_{\mathrm{k}, \mathrm{m}}=\left(B_{(\mathrm{k}-1),(\mathrm{m}-1)}-\left\{\mathrm{v}_{5 \mathrm{k}-5}\right\}\right) \cup\left\{\mathrm{v}_{5 \mathrm{k}-4}, \mathrm{v}_{5 \mathrm{k}-1}, \mathrm{v}_{5 \mathrm{k}}\right\}$.

Also, $\left|A_{\mathrm{k}, \mathrm{i}}\right|=\left|B_{\mathrm{k}, \mathrm{j}}\right|=2\left\lfloor\frac{5 k}{5}\right\rfloor+1 ; \mathrm{i}=1,2, \ldots, \ell$ and $\mathrm{j}=1,2, \ldots, \mathrm{~m}$ and $\left|\mathcal{D}_{\mathrm{n}}\right|=\ell+\mathrm{m}=\frac{k(k+3)}{2}$. By induction hypothesis, there are exactly $\frac{n(n+3)}{2}$ minimum co - isolated locating dominating sets of $P_{5 n+1}$ containing $\mathrm{v}_{1}$ and $\mathrm{v}_{5 \mathrm{n}}$ with the labellings $\mathrm{v}_{1}, \mathrm{v}_{2}, \mathrm{v}_{3}, \ldots, \mathrm{v}_{5 \mathrm{n}-1}, \mathrm{v}_{5 \mathrm{n}}, \mathrm{v}_{5 \mathrm{n}+1}$, for all $\mathrm{n} \geq 1$.

Theorem: 3.5 There are exactly $\frac{n(n+1)(n+5)}{6}$ minimum co - isolated locating dominating sets of $P_{5 n+1}$ containing $\mathrm{v}_{2}$ and $\mathrm{v}_{5 \mathrm{n}}$ with the labellings $\mathrm{v}_{1}, \mathrm{v}_{2}, \mathrm{v}_{3}, \ldots, \mathrm{v}_{5 n-1}, \mathrm{v}_{5 n}, \mathrm{v}_{5 \mathrm{n}+1}$, where $\mathrm{n} \geq 1$.

Proof: Let the labellings of vertices of $P_{5 n+1}$ be $v_{1}, v_{2}, v_{3}, \ldots, v_{5 n-1}, v_{5 n}, v_{5 n+1}$. The theorem is proved by the method of induction on $n$.

For $\mathrm{n}=1$, the sets $A_{1,1}=\left\{\mathrm{v}_{2}, \mathrm{v}_{3}, \mathrm{v}_{5}\right\} ; A_{1,2}=\left\{\mathrm{v}_{2}, \mathrm{v}_{4}, \mathrm{v}_{5}\right\}$ are the only minimum co - isolated locating dominating sets of $\mathrm{P}_{6}$ containing $\mathrm{v}_{2}$ and $\mathrm{v}_{5}$, since $\left|A_{1,1}\right|=\left|A_{1,2}\right|=3=2\left[\frac{5 n+1}{5}\right]+1$.

Let $\mathcal{D}_{1}=\left\{A_{1,1}, A_{1,2}\right\}$. Then $\left|\mathcal{D}_{1}\right|=2$.
For $\mathrm{n}=2$, the sets $A_{2, \mathrm{i}}=\mathrm{A}_{1, \mathrm{i}} \cup\left\{\mathrm{v}_{8}, \mathrm{v}_{10}\right\} ; \mathrm{i}=1,2$ and $B_{2, \mathrm{i}}=\left(\mathrm{A}_{2, \mathrm{i}}-\mathrm{v}_{5}\right) \cup\left\{\mathrm{v}_{6}, \mathrm{v}_{8}, \mathrm{v}_{10}\right\} ; \mathrm{i}=1,2 ; \mathrm{B}_{2,3}=\left(\mathrm{A}_{22}-\left\{\mathrm{v}_{5}\right\}\right) \cup\left\{\mathrm{v}_{6}, \mathrm{v}_{9}\right.$, $\left.\mathrm{v}_{10}\right\}, C_{2,1}=\left\{\mathrm{v}_{2}, \mathrm{v}_{4}, \mathrm{v}_{7}, \mathrm{v}_{8}, \mathrm{v}_{10}\right\}$ and $\mathrm{E}_{2,1}=\left\{\mathrm{v}_{2}, \mathrm{v}_{4}, \mathrm{v}_{7}, \mathrm{v}_{9},{ }_{10}\right\}$ are the only minimum co - isolated locating dominating sets of $P_{11}$ containing $v_{2}$ and $v_{10}$, since $\left|A_{2, i}\right|=\left|\mathrm{B}_{2, \mathrm{j}}\right|=\left|\mathrm{C}_{2,1}\right|=\left|\mathrm{E}_{2,1}\right|=5=2\left[\frac{5 n+1}{5}\right\rfloor+1 ; \mathrm{i}=1,2$ and $\mathrm{j}=1,2,3$.

Let $\mathcal{D}_{2}=\left\{A_{2,1}, A_{2,2}, \mathrm{~B}_{2,1}, \mathrm{~B}_{2,2}, \mathrm{~B}_{2,3}, \mathrm{C}_{2,1}, \mathrm{E}_{2,1}\right\}$. Then $\left|\mathcal{D}_{2}\right|=7=\frac{n(n+1)(n+5)}{6}$.
Let $n=3$. In order to construct the minimum co - isolated locating dominating sets containing $\mathrm{v}_{2}$ and $\mathrm{v}_{15}$ of $\mathrm{P}_{16}$, the following sets are defined using the sets in $\mathcal{D}_{2}$.

```
Let \(A_{3, \mathrm{i}}=A_{2, \mathrm{i}} \cup\left\{\mathrm{v}_{13}, \mathrm{v}_{15}\right\} ; \mathrm{i}=1,2\);
    \(A_{3, \mathrm{j}}=A_{2, \mathrm{j}-2)} \cup\left\{\mathrm{v}_{13}, \mathrm{v}_{15}\right\} ; \mathrm{j}=3,4,5 ;\)
    \(A_{3, \mathrm{k}}=C_{2,(\mathrm{k}-5)} \cup\left\{\mathrm{v}_{13}, \mathrm{v}_{15}\right\} ; \mathrm{k}=6,7\);
    \(B_{3, \mathrm{i}}=\left(B_{2, \mathrm{i}}-\left\{\mathrm{v}_{10}\right\}\right) \cup\left\{\mathrm{v}_{11}, \mathrm{v}_{13}, \mathrm{v}_{15}\right\} ; \mathrm{i}=1,2,3 ;\)
    \(B_{3,4}=\left(B_{2,3}-\left\{\mathrm{v}_{10}\right\}\right) \cup\left\{\mathrm{v}_{11}, \mathrm{v}_{14}, \mathrm{v}_{15}\right\}\)
    \(C_{3, \mathrm{i}}=\left(C_{2, \mathrm{i}}-\left\{\mathrm{v}_{10}\right\}\right) \cup\left\{\mathrm{v}_{11}, \mathrm{v}_{13}, \mathrm{v}_{15}\right\} ; \mathrm{i}=1,2\);
    \(E_{3,1}=\left(\mathrm{E}_{2,1}-\left\{\mathrm{v}_{10}\right\}\right) \cup\left\{\mathrm{v}_{11}, \mathrm{v}_{14}, \mathrm{v}_{15}\right\} ;\)
    \(E_{3,2}=\left(\mathrm{E}_{2,1}-\left\{\mathrm{v}_{10}\right\}\right) \cup\left\{\mathrm{v}_{12}, \mathrm{v}_{14}, \mathrm{v}_{15}\right\}\); and
    \(E_{3,3}=\left(\mathrm{E}_{3,2}-\left\{\mathrm{v}_{14}\right\}\right) \cup\left\{\mathrm{v}_{13}\right\}\).
```

These are the only minimum co - isolated locating dominating sets of $P_{16}$ containing $v_{2}$ and $v_{15}$, since $\left|A_{3, \mathrm{i}}\right|=\left|\mathrm{B}_{3, \mathrm{j}}\right|=\left|\mathrm{C}_{3, \mathrm{k}}\right|=\left|\mathrm{E}_{3, \mathrm{t}}\right|=7=2\left[\frac{5 n+1}{5}\right]+1 ; \mathrm{i}=1,2, \ldots, 7 ; \mathrm{j}=1,2,3,4, \mathrm{k}=1,2$, and $\mathrm{t}=1,2,3$.

Let $\mathcal{D}_{3}=\left\{A_{31}, A_{32}, \ldots, \mathrm{~A}_{37}, \mathrm{~B}_{31}, \mathrm{~B}_{32}, \mathrm{~B}_{33}, \mathrm{~B}_{34}, \mathrm{C}_{31}, \mathrm{C}_{32}, \mathrm{E}_{3,1}, \mathrm{E}_{3,2}, \mathrm{E}_{3,3}\right\}$. Then $\left|\mathcal{D}_{3}\right|=16=\frac{n(n+1)(n+5)}{6}$. Therefore the result is true for $\mathrm{n}=1,2$ and 3 .

Assume that the Theorem holds for $\mathrm{n}=\mathrm{k}-1$. That is, there are exactly $\frac{(k-1) k(k+4)}{6}$ minimum co - isolated locating dominating sets of $\mathrm{P}_{5(k-1)+1}$ containing $\mathrm{v}_{2}$ and $\mathrm{v}_{5(k-1)}$ with the labellings $\mathrm{v}_{1}, \mathrm{v}_{2}, \mathrm{v}_{3}, \ldots, \mathrm{v}_{5(k-1)-1}, \mathrm{v}_{5(k-1)}, \mathrm{v}_{5(k-1)+1}$, where $\mathrm{k} \geq 2$.

Let $\mathcal{D}_{k-1}$ be the set of all minimum co - isolated locating dominating sets of $P_{5(k-1)+1}$ containing $v_{2}$ and $v_{5(k-1)}$.
Then $\mathcal{D}_{\mathrm{k}-1}=\left\{A_{(\mathrm{k}-1), 1}, A_{(\mathrm{k}-1), 2}, A_{(\mathrm{k}-1), 3}, \ldots, A_{(\mathrm{k}-1), \mathrm{r}}, B_{(\mathrm{k}-1), 1}, B_{(\mathrm{k}-1), 2}, \ldots, B_{(\mathrm{k}-1), \mathrm{k}}, C_{(\mathrm{k}-1), 1}, C_{(\mathrm{k}-1), 2}, C_{(\mathrm{k}-1), 3}, \ldots, C_{(\mathrm{k}-1), \mathrm{s}}\right.$ $\left.\left., E_{(\mathrm{k}-1) 1}, E_{(\mathrm{k}-1) 2}, \ldots, E_{(\mathrm{k}-1)(\mathrm{k}-1)}\right\}\right\}$, where $\mathrm{r}=\frac{(k-2)(k-1)(k+3)}{6}$ and $\mathrm{s}=\frac{k(k-3)}{2}$, where $\mathrm{k} \geq 4$.

Also $\left|\mathcal{D}_{\mathrm{k}-1}\right|=\mathrm{r}+\mathrm{k}+\mathrm{s}+(\mathrm{k}-1)=\frac{(k-1) k(k+4)}{6}$ and $\left|A_{(\mathrm{k}-1), \mathrm{i}}\right|=\left|B_{(\mathrm{k}-1) \mathrm{j}}\right|=\left|C_{(\mathrm{k}-1), \mathrm{p}}\right|=\left|E_{(\mathrm{k}-1), \mathrm{q}}\right|=2\left[\frac{5(k-1)+1}{5}\right]+1 ; \mathrm{i}=1,2$, $\ldots, r ; j=1,2, \ldots, n ; p=1,2, \ldots ., s$ and $q=1,2, \ldots, k-1$.

Let $\mathrm{n}=\mathrm{k}$. In order to construct the minimum co - isolated locating dominating sets of $\mathrm{P}_{5 \mathrm{k}+1}$ containing $\mathrm{v}_{2}$ and $\mathrm{v}_{5 \mathrm{k}}$, the following sets are defined using the sets in $\mathcal{D}_{\mathrm{k}-1}$. Let $\mathcal{D}_{\mathrm{k}}$ be the set of all minimum co - isolated locating dominating sets of $\mathrm{P}_{5 \mathrm{k}+1}$ containing $\mathrm{v}_{2}$ and $\mathrm{v}_{5 \mathrm{k}}$. Then, $\mathcal{D}_{\mathrm{k}}=\left\{A_{\mathrm{k}, 1}, A_{\mathrm{k}, 2}, A_{\mathrm{k}, 3}, \ldots, A_{k, l}, B_{\mathrm{k}, 1}, B_{\mathrm{k}, 2}, \ldots, B_{\mathrm{k}, \mathrm{k}+1}, C_{\mathrm{k}, 1}, C_{\mathrm{k}, 2}, \ldots, C_{\mathrm{k}, \mathrm{m}}, E_{\mathrm{k}, 1,}\right.$ $\left.E_{\mathrm{k}, 2}, \ldots, E_{\mathrm{k}, \mathrm{k}}\right\}$,
where $\ell=\frac{(k-1) k(k+4)}{6}, \mathrm{~m}=\frac{(k+1)(k-2)}{2}$,

## S. Muthammai, N. Meenal* / The Number Of Minimum Co - Isolated Locating Dominating Sets Of Paths / IJMA- 6(5), May-2015.

where $\mathrm{k} \geq 2$ and

$$
\begin{aligned}
& A_{\mathrm{n}, \mathrm{i}}=A_{(\mathrm{k}-1), i} \cup\left\{\mathrm{v}_{5 \mathrm{k}-2}, \mathrm{v}_{5 \mathrm{k}}\right\}, \mathrm{i}=1,2, \ldots, \mathrm{r} ; \\
& A_{\mathrm{n}, \mathrm{j}}=B_{(k-1),(j-r)} \cup\left\{\mathrm{v}_{5 \mathrm{k}-2}, \mathrm{v}_{5 \mathrm{k}}\right\}, \mathrm{j}=\mathrm{r}+1, \mathrm{r}+2, \ldots, \mathrm{r}+\mathrm{k} ; \\

& C_{\mathrm{k}, \mathrm{i}}=\left(C_{(\mathrm{k}-1), \mathrm{i}}-\left\{\mathrm{v}_{5 \mathrm{k}-5}\right\} \cup\left\{\mathrm{v}_{5 \mathrm{k}-4,}, \mathrm{v}_{5 \mathrm{k}-2}, \mathrm{v}_{5 \mathrm{k}}\right\} ; \mathrm{i}=1,2, \ldots, \mathrm{~m}\right. \\
& E_{\mathrm{k}, \mathrm{~h}}=\left(E_{(\mathrm{k}-1) \mathrm{h}}-\left\{\mathrm{v}_{5 \mathrm{k}-5}\right\}\right) \cup\left\{\mathrm{v}_{5 \mathrm{k}-4,}, \mathrm{v}_{5 \mathrm{k}-1}, \mathrm{v}_{5 \mathrm{k}}\right\} ; \mathrm{h}=1,2, \ldots, \mathrm{k}-2 ; \\
& \mathrm{E}_{\mathrm{k}, \mathrm{k}-1)}=\left(E_{(\mathrm{k}-1),(\mathrm{k}-2)}-\left\{\mathrm{v}_{5 \mathrm{k}-5}\right\}\right) \cup\left\{\mathrm{v}_{5 \mathrm{k}-3}, \mathrm{v}_{5 \mathrm{k}-1}, \mathrm{v}_{5 \mathrm{k}}\right\} ; \text { and } \\
& \mathrm{E}_{\mathrm{k}, \mathrm{k}}=\left(E_{\mathrm{k},(\mathrm{k}-2)}-\left\{\mathrm{v}_{5 \mathrm{k}-1}\right\}\right) \cup\left\{\mathrm{v}_{5 \mathrm{k}-2}\right\}
\end{aligned}
$$

Also, $\left|A_{\mathrm{k}, \mathrm{i}}\right|=\left|B_{\mathrm{k}, \mathrm{j}}\right|=\left|C_{\mathrm{k}, \mathrm{p}}\right|=\left|E_{\mathrm{k}, \mathrm{q}}\right|=2\left|\frac{k}{5}\right|+1 ; \mathrm{i}=1,2, \ldots, \ell$ and $\mathrm{j}=1,2, \ldots, \mathrm{k}+1 ; \mathrm{p}=1,2, \ldots, \mathrm{~m}$ and $\mathrm{q}=1,2, \ldots, \mathrm{k}$ and $\left|\mathcal{D}_{\mathrm{k}}\right|=\ell+\mathrm{k}+1+\mathrm{m}+\mathrm{k}=\frac{k(k+1)(k+5)}{6}$. Therefore, there are $\frac{k(k+1)(k+5)}{6}$ minimum co - isolated locating dominating sets of $\mathrm{P}_{5 \mathrm{k}+1}$ containing $\mathrm{v}_{2}$ and $\mathrm{v}_{5 \mathrm{k}}$. The Theorem is true for $\mathrm{n}=\mathrm{k}$. By induction hypothesis, the theorem is true for all $\mathrm{n} \geq 1$.

Theorem: 3.6 For any integer $n \geq 1, \gamma_{\text {Dcild }}\left(P_{5 n+1}\right)=\frac{(n+3)\left(n^{2}+9 n+2\right)}{6}$.
Proof: $\gamma_{\text {Dcild }}\left(\mathrm{P}_{5 \mathrm{n}+1}\right)$ is the sum of the number of minimum co - isolated locating dominating sets of $\mathrm{P}_{5 \mathrm{n}+1}$ containing
(i) $v_{1}$ and $v_{5 n+1}$
(ii) $v_{1}$ and $v_{5 n}$
(iii) $v_{2}$ and $v_{5 n+1}$
(iv) $v_{2}$ and $v_{5 n}$
(a) For (i), the number of minimum co-isolated dominating sets of $P_{5 n+1}$ containing $v_{1}$ and $v_{5 n+1}$ is ( $n+1$ ) by Theorem 3.3.
(b) For (ii), the number of minimum co-isolated dominating sets of $\mathrm{P}_{5 n+1}$ containing $\mathrm{v}_{1}$ and $\mathrm{v}_{5 \mathrm{n}}$ is $\frac{n(n+3)}{2}$ by Theorem 3.4.
(c) For (iii), the number of minimum co - isolated locating dominating sets of $P_{5 n+1}$ containing $v_{2}$ and $v_{5 n+1}$ is same as that of minimum co - isolated locating dominating sets containing $\mathrm{v}_{1}$ and $\mathrm{v}_{5 \mathrm{n}}$ and hence it is $\frac{n(n+3)}{2}$ ).
(d) For (iv), the number of minimum co-isolated dominating sets of $\mathrm{P}_{5 n+1}$ containing $\mathrm{v}_{2}$ and $\mathrm{v}_{5 \mathrm{n}}$ is $\frac{n(n+1)(n+5)}{6}$, by Theorem 3.5.
Hence, $\gamma_{\text {Dcild }}\left(\mathrm{P}_{5 n+1}\right)=\frac{(n+3)\left(n^{2}+9 n+2\right)}{6}$.
Remark: 3.7 The Recurrence relation is given by
$\gamma_{\text {Dcild }}\left(\mathrm{P}_{5 n+1}\right)-\gamma_{\text {Dcild }}\left(\mathrm{P}_{5(n-1)+1}\right)=\frac{(n+3)\left(n^{2}+9 n+2\right)}{6}-\frac{(n+2)\left(n^{2}+7 n-6\right)}{6}$.

$$
=\frac{7 n^{2}+21 n^{6}+18}{6}
$$

Therefore, $\gamma_{\text {Dcild }}\left(\mathrm{P}_{5 n+1}\right)=\gamma_{\text {Dcild }}\left(\mathrm{P}_{5 n-4}\right)+\frac{7 n^{2}+21 n+18}{6} ; n \geq 2$.
In the following, the number of minimum co-isolated locating dominating sets of $\mathrm{P}_{5 n+2}$ is found.
Theorem: 3.8 There is no minimum co - isolated locating dominating set of $P_{5 n+2}$ containing $v_{1}$ and $v_{5 n+2}$ with the labellings $\mathrm{v}_{1}, \mathrm{v}_{2}, \mathrm{v}_{3}, \ldots, \mathrm{v}_{5 \mathrm{n}}, \mathrm{v}_{5 \mathrm{n}+1}, \mathrm{v}_{5 \mathrm{n}+2}$, where $\mathrm{n} \geq 1$.

Proof: On the contrary, let $D$ be a minimum co - isolated locating dominating set of $P_{5 n+2}$ containing $v_{1}$ and $v_{5 n+2}$ with the labellings $\mathrm{v}_{1}, \mathrm{v}_{2}, \mathrm{v}_{3}, \ldots ., \mathrm{v}_{5 n}, \mathrm{v}_{5 n+1}, \mathrm{v}_{5 n+2}$. Then, $|\mathrm{D}|=2\left\lfloor\frac{5 n+2}{5}\right\rfloor+1$ (By Theorem 2.5.) and $\mathrm{D}^{\prime}=\mathrm{D}-\left\{\mathrm{v}_{1}, \mathrm{v}_{5 n+2}\right\}$ will be a minimum co - isolated locating dominating set of $\mathrm{P}_{5 n}$ with the labellings $\mathrm{v}_{3}, \mathrm{v}_{4}, \mathrm{v}_{5}, \ldots, \mathrm{v}_{5 n-1}, \mathrm{v}_{5 n} .\left|\mathrm{D}^{\prime}\right|=2\left[\frac{5 n+2}{5}\right]-1$. Therefore, $\gamma_{\text {cild }}\left(\mathrm{P}_{5 n}\right) \leq 2\left[\frac{5 n+2}{5}\right]-1$. But, $\gamma_{\text {cild }}\left(\mathrm{P}_{5 \mathrm{n}}\right)=2\left[\frac{5 n+2}{5}\right]$, which is a contradiction. Hence, there is no minimum co - isolated locating dominating set of $\mathrm{P}_{5 \mathrm{n}+2}$ containing $\mathrm{v}_{1}$ and $\mathrm{v}_{5 \mathrm{n}+2}$.

Theorem: 3.9 There is exactly one minimum co - isolated locating dominating set of $\mathrm{P}_{5 n+2}$ containing $\mathrm{v}_{2}$ and $\mathrm{v}_{5 \mathrm{n}+2}$ with the labellings $\mathrm{v}_{1}, \mathrm{v}_{2}, \mathrm{v}_{3}, \ldots, \mathrm{v}_{5 \mathrm{n}}, \mathrm{v}_{5 \mathrm{n}+1}, \mathrm{v}_{5 \mathrm{n}+2}$, where $\mathrm{n} \geq 1$.

Proof: Clearly, $\mathrm{D}=\left\{\mathrm{v}_{2}, \mathrm{v}_{4}, \mathrm{v}_{7}, \ldots, \mathrm{v}_{5 \mathrm{n}-1}, \mathrm{v}_{5 \mathrm{n}+2}\right\}$ is a minimum co - isolated locating dominating set of $\mathrm{P}_{5 \mathrm{n}+2}$ containing $\mathrm{v}_{2}$ and $\mathrm{v}_{5 \mathrm{n}+2}$, which proves the existence and $|\mathrm{D}|=2\left\lfloor\frac{5 n+2}{5}\right]+1$. To prove the uniqueness, Let $D^{\prime}=\mathrm{D}-\left\{\mathrm{v}_{5 \mathrm{n}+2}\right\}$. $D^{\prime}$ is a minimum co - isolated locating dominating set of $P_{5 n}$ with the labellingss $v_{1}, v_{2}, v_{3}, \ldots, v_{5 n}$, since
$\left|D^{\prime}\right|=|\mathrm{D}|-1=2\left[\frac{5 n+2}{5}\right]=\gamma_{\text {cild }}\left(\mathrm{P}_{5 n}\right)$. But by Theorem 3.2, $D^{\prime}$ is the unique minimum co - isolated locating dominating set of $P_{5 n}$ and hence $D$ is unique.

Theorem: 3.10 There are exactly $n$ minimum co - isolated locating dominating sets of $P_{5 n+2}$ containing $\mathrm{v}_{2}$ and $\mathrm{v}_{5 \mathrm{n}+1}$ with the labellings $\mathrm{v}_{1}, \mathrm{v}_{2}, \mathrm{v}_{3}, \ldots, \mathrm{v}_{5 \mathrm{n}}, \mathrm{v}_{5 \mathrm{n}+1}, \mathrm{v}_{5 \mathrm{n}+2}$, where $\mathrm{n} \geq 1$.

Proof: Let the labellings of vertices of $\mathrm{P}_{5 n+2}$ be $\mathrm{v}_{1}, \mathrm{v}_{2}, \mathrm{v}_{3}, \ldots, \mathrm{v}_{5 \mathrm{n}-1}, \mathrm{v}_{5 \mathrm{n}}, \mathrm{v}_{5 \mathrm{n}+2}$. The theorem is proved by the method of induction on $n$. For $n=1, A_{1,1}=\left\{\mathrm{v}_{2}, \mathrm{v}_{4}, \mathrm{v}_{6}\right\}$ is the only minimum co - isolated locating dominating set of $\mathrm{P}_{7}$ containing $\mathrm{v}_{2}$ and $\mathrm{v}_{6}$, since, $\left|A_{1,1}\right|=3=2\left[\frac{5 n+2}{5}\right]+1$. Let $\mathcal{D}_{1}=\left\{A_{1,1}\right\}$ and $\left|\mathcal{D}_{1}\right|=1=\mathrm{n}$. Let $\mathrm{n}=2$. In order to construct the minimum co - isolated locating dominating sets of $\mathrm{P}_{12}$ containing $\mathrm{v}_{2}$ and $\mathrm{v}_{11}$, the following sets are defined using $\mathcal{D}_{1}$. Let $A_{2,1}=A_{1,1} \cup\left\{\mathrm{v}_{9}, \mathrm{v}_{11}\right\}$; and $B_{2,1}=\left(A_{1,1}-\left\{\mathrm{v}_{6}\right\}\right) \cup\left\{\mathrm{v}_{7}, \mathrm{v}_{9}, \mathrm{v}_{11}\right\}$. These are the only minimum co - isolated locating dominating sets of $\mathrm{P}_{12}$ containing $\mathrm{v}_{2}$ and $\mathrm{v}_{11}$, since, $\left|A_{2,1}\right|=\left|B_{2,1}\right|=5=2\left[\frac{5 n+2}{5}\right]+1$. Let $\mathcal{D}_{2}=\left\{A_{2,1}, B_{2,1}\right\}$ and $\left|\mathcal{D}_{2}\right|=2=\mathrm{n}$. Let $\mathrm{n}=3$. In order to construct the minimum co - isolated locating dominating sets of $\mathrm{P}_{17}$ containing $\mathrm{v}_{2}$ and $\mathrm{v}_{16}$, the following sets are defined using the sets in $\mathcal{D}_{2}$.

Let $A_{3,1}=A_{2,1} \cup\left\{\mathrm{v}_{14}, \mathrm{v}_{16}\right\} ; A_{3,2}=B_{2,1} \cup\left\{\mathrm{v}_{14}, \mathrm{v}_{16}\right\}$ and $B_{3,1}=\left(B_{2,1}-\left\{\mathrm{v}_{11}\right\}\right) \cup\left\{\mathrm{v}_{12}, \mathrm{v}_{14}, \mathrm{v}_{16}\right\}$.
These are the only minimum co - isolated locating dominating sets of $P_{17}$ containing $v_{2}$ and $v_{16}$, since, $\left|A_{3, \mathrm{i}}\right|=\left|B_{31}\right|=7=2\left\lfloor\frac{5 n+2}{5}\right\rfloor+1 ; \mathrm{i}=1$, 2, where $\mathrm{n}=3$.

Let $\mathcal{D}_{3}=\left\{A_{3,1}, A_{3,2}, B_{3,1}\right\}$ and $\left|\mathcal{D}_{3}\right|=3=n$. Therefore, the result is true for $\mathrm{n}=1,2$ and 3 . Assume that the theorem holds for $\mathrm{n}=\mathrm{k}-1$. That is, there are exactly $\mathrm{k}-1$ minimum co - isolated locating dominating sets of $\mathrm{P}_{5(\mathrm{k}-1)+2}$ containing $\mathrm{v}_{2}$ and $\mathrm{v}_{5(\mathrm{k}-1)+1}$ with the labellings $\mathrm{v}_{1}, \mathrm{v}_{2}, \mathrm{v}_{3}, \ldots, \mathrm{v}_{5 \mathrm{n}}, \mathrm{v}_{5(\mathrm{k}-1)+1}, \mathrm{v}_{5(\mathrm{k}-1)+2}$, where $\mathrm{k} \geq 4$. Let $\mathcal{D}_{\mathrm{k}-1}$ be the set of all minimum co isolated locating dominating sets of $P_{5(k-1)+2}$ containing $v_{2}$ and $v_{5(k-1)+1}$.

Also, $\mathcal{D}_{\mathrm{k}-1}=\left\{A_{(\mathrm{k}-1), 1}, A_{(\mathrm{k}-1), 2}, A_{(\mathrm{k}-1), 3}, \ldots, A_{(\mathrm{k}-1),(\mathrm{k}-2)}, B_{(\mathrm{k}-1), 1}\right\}, \quad\left|\mathcal{D}_{\mathrm{k}-1}\right|=\mathrm{k}-1$ and
$\left|A_{(\mathrm{k}-1), \mathrm{i}}\right|=\left|B_{(\mathrm{k}-1), 1}\right|=2\left[\frac{5(k-1)+2}{5}\right]+1 ; \mathrm{i}=1,2, \ldots,(\mathrm{k}-1)$. The result is to be proved, when $\mathrm{n}=\mathrm{k}$. In order to construct the minimum co - isolated locating dominating sets of $\mathrm{P}_{5 k+2}$ containing $\mathrm{v}_{2}$ and $\mathrm{v}_{5 \mathrm{k}+1}$, the following sets are defined using the sets in $\mathcal{D}_{k-1}$. Let $\mathcal{D}_{k}$ be the set of all minimum co - isolated locating dominating set of $P_{5 k+1}$ containing $\mathrm{v}_{2}$ and $\mathrm{v}_{5 \mathrm{k}+1}$.

Then, $\mathcal{D}_{\mathrm{k}}=\left\{A_{\mathrm{k}, 1}, A_{\mathrm{k}, 2}, A_{\mathrm{k}, 3}, \ldots, A_{k,(k-1)}, B_{\mathrm{k}, 1}\right\}$ and $A_{\mathrm{k}, \mathrm{i}}=A_{(k-1), i} \cup\left\{\mathrm{v}_{5 \mathrm{k}-1}, \mathrm{v}_{5 \mathrm{k}+1}\right\} ; \mathrm{i}=1,2, \ldots,(\mathrm{k}-2)$ and $A_{\mathrm{k},(\mathrm{k}-1)}=B_{(k-1), 1} \cup\left\{\mathrm{v}_{5 \mathrm{k}-1}, \mathrm{v}_{5 \mathrm{k}+1}\right\}$ and $B_{\mathrm{k}, 1}=\left(B_{(\mathrm{k}-1), 1}-\left\{\mathrm{v}_{5 \mathrm{k}-4}\right\}\right) \cup\left\{\mathrm{v}_{5 \mathrm{k}-3}, \mathrm{v}_{5 \mathrm{k}-1}, \mathrm{v}_{5 \mathrm{k}+2}\right\}$.

Also, $\left|A_{\mathrm{k}, \mathrm{i}}\right|=\left|B_{\mathrm{k}, 1}\right|=2\left\lfloor\frac{5 k+2}{5}\right\rfloor+1$; $\mathrm{i}=1,2, \ldots,(\mathrm{k}-1)$ and $\left|\mathcal{D}_{\mathrm{k}}\right|=\mathrm{k}$. Therefore, there are exactly k minimum co isolated locating dominating sets of $\mathrm{P}_{5 k+2}$ containing $\mathrm{v}_{2}$ and $\mathrm{v}_{5 k+1}$ with the labellings $\mathrm{v}_{1}, \mathrm{v}_{2}, \mathrm{v}_{3}, \ldots, \mathrm{v}_{5 k}, \mathrm{v}_{5 k+1}, \mathrm{v}_{5 k+2}$. By induction hypothesis, the theorem is proved for all $n \geq 1$.

Theorem: 3.11 For any integer $n \geq 1, \gamma_{\text {Dcild }}\left(P_{5 n+2}\right)=n+2$.

Proof: $\gamma_{\text {Dcild }}\left(\mathrm{P}_{5 \mathrm{n}+2}\right)$ is the sum of the number of minimum co - isolated locating dominating sets of $\mathrm{P}_{5 \mathrm{n}+2}$ containing
(i) $v_{1}$ and $v_{5 n+2}$
(ii) $v_{2}$ and $v_{5 n+2}$
(iii) $v_{1}$ and $v_{5 n+1}$
(iv) $v_{2}$ and $v_{5 n+1}$
(a) For (i), there is no minimum co-isolated dominating sets of $P_{5 n+2}$ containing $v_{1}$ and $v_{5 n+2}$, by Theorem 3.8.
(b) For (ii), the number of minimum co-isolated dominating sets of $P_{5 n+2}$ containing $v_{2}$ and $v_{5 n+2}$ is 1 , by Theorem 3.9.
(c) For (iii), the number of minimum co - isolated locating dominating sets of $\mathrm{P}_{5 n+2}$ containing $\mathrm{v}_{1}$ and $\mathrm{v}_{5 \mathrm{n}+1}$ is same as that of minimum co - isolated locating dominating sets containing $v_{2}$ and $v_{5 n+2}$ and hence it is 1 .
(d) For (iv), the number of minimum co-isolated dominating sets of $P_{5 n+2}$ containing $v_{2}$ and $v_{5 n+1}$ is $n$, By Theorem 3.10. Hence, $\gamma_{\text {Dcild }}\left(P_{5 n+2}\right)=n+2$.

In the following, the number of minimum co-isolated locating dominating sets of $\mathrm{P}_{5 n+3}$ is found.
Theorem: 3.12 There are exactly $\frac{n^{2}+5 n+2}{2}$ minimum co - isolated locating dominating sets of $P_{5 n+3}$ containing $v_{1}$ and $\mathrm{v}_{5 \mathrm{n}+3}$ with the labellings $\mathrm{v}_{1}, \mathrm{v}_{2}, \mathrm{v}_{3}, \ldots, \mathrm{v}_{5 \mathrm{n}+2}, \mathrm{v}_{5 \mathrm{n}+3}$, where $\mathrm{n} \geq 2$.

## S. Muthammai, N. Meenal* / The Number Of Minimum Co - Isolated Locating Dominating Sets Of Paths / IJMA- 6(5), May-2015.

Proof: Let the labellings of vertices of $P_{5 n+3}$ be $v_{1}, v_{2}, v_{3}, \ldots, v_{5 n+2}, v_{5 n+3}$. The theorem is proved by the method of induction on n . For $\mathrm{n}=1, A_{1,1}=\left\{\mathrm{v}_{1}, \mathrm{v}_{3}, \mathrm{v}_{5}, \mathrm{v}_{8}\right\} ; A_{1,2}=\left\{\mathrm{v}_{1}, \mathrm{v}_{3}, \mathrm{v}_{6}, \mathrm{v}_{8}\right\} ; A_{1,3}=\left\{\mathrm{v}_{1}, \mathrm{v}_{3}, \mathrm{v}_{6}, \mathrm{v}_{8}\right\} ; A_{1,4}=\left\{\mathrm{v}_{1}, \mathrm{v}_{4}, \mathrm{v}_{6}, \mathrm{v}_{8}\right\}$ are the only minimum co - isolated locating dominating sets of $\mathrm{P}_{8}$ containing $\mathrm{v}_{1}$ and $\mathrm{v}_{8}$, since, $\left|A_{1, \mathrm{i}}\right|=4=2\left\lfloor\frac{5 n+3}{5}\right\rfloor+2, \mathrm{i}=1,2$, 3, 4, by Theorem 2.5. Let $\mathcal{D}_{1}=\left\{A_{1,1}, A_{1,2}, A_{1,3}\right\}$ and $\left|\mathcal{D}_{1}\right|=4$. Let $\mathrm{n}=2$. In order to construct the minimum co -isolated locating dominating sets of $\mathrm{P}_{13}$ containing $\mathrm{v}_{1}$ and $\mathrm{v}_{13}$, the following sets are defined using the sets in $\mathcal{D}_{1}$.

Let $A_{2, \mathrm{i}}=A_{1, \mathrm{i}} \cup\left\{\mathrm{v}_{10}, \mathrm{v}_{13}\right\} ; \mathrm{i}=1,2,3,4$ and $A_{2,5}=\left(A_{1,4}-\left\{\mathrm{v}_{8}\right\}\right) \cup\left\{\mathrm{v}_{9}, \mathrm{v}_{10}, \mathrm{v}_{13}\right\}$;
$B_{2,1}=A_{1,3} \cup\left\{\mathrm{v}_{11}, \mathrm{v}_{13}\right\} ; B_{2,2}=A_{1,4} \cup\left\{\mathrm{v}_{11}, \mathrm{v}_{13}\right\}$ and $B_{2,3}=\left(A_{1,4}-\left\{\mathrm{v}_{8}\right\}\right) \cup\left\{\mathrm{v}_{9}, \mathrm{v}_{11}, \mathrm{v}_{13}\right\}$. These are the only minimum co - isolated locating dominating sets of $\mathrm{P}_{13}$ containing $\mathrm{v}_{1}$ and $\mathrm{v}_{13}$, since $\left|A_{2, \mathrm{i}}\right|=\left|B_{2, j}\right|=6=2\left[\frac{5 n+3}{5}\right]+2 ; \mathrm{i}=1,2, \ldots, 5$ and $\mathrm{j}=1,2,3$.

Let $\mathcal{D}_{2}=\left\{A_{2,1}, A_{2,2}, \ldots, A_{2,5}, B_{2,1}, B_{2,2}, B_{2,3}\right\}$ and $\left|\mathcal{D}_{2}\right|=8=\frac{n^{2}+5 n+2}{2}$. Let $\mathrm{n}=3$. In order to construct the minimum co isolated locating dominating sets of $\mathrm{P}_{18}$ containing $\mathrm{v}_{1}$ and $\mathrm{v}_{18}$, the following sets are defined using the sets in $\mathcal{D}_{2}$.

Let $\mathrm{A}_{3, \mathrm{i}}=A_{2, i} \cup\left\{\mathrm{v}_{15}, \mathrm{v}_{18}\right\}$, for $\mathrm{i}=1,2, \ldots, 5$, and
$\mathrm{A}_{3, \mathrm{j}}=B_{2,(j-5)} \cup\left\{\mathrm{v}_{15}, \mathrm{v}_{18}\right\}$, for $\mathrm{j}=6,7,8$ and $A_{3,9}=B_{2,3^{-}}\left\{\mathrm{v}_{13}\right\} \cup\left\{\mathrm{v}_{14,} \mathrm{v}_{15}, \mathrm{v}_{18}\right\} ;$
$B_{3, \mathrm{i}}=B_{2, \mathrm{i}} \cup\left\{\mathrm{v}_{16}, \mathrm{v}_{18}\right\} ; \mathrm{i}=1,2,3$;
$B_{3,4}=\left(B_{2,3}-\left\{\mathrm{v}_{13}\right\}\right) \cup\left\{\mathrm{v}_{14}, \mathrm{v}_{16}, \mathrm{v}_{18}\right\}$.
These are the only minimum co - isolated locating dominating sets of $\mathrm{P}_{18}$ containing $\mathrm{v}_{1}$ and $\mathrm{v}_{18}$, since,
$\left|A_{3, \mathrm{i}}\right|=\left|B_{3, \mathrm{j}}\right|=8=2\left[\frac{5 n+3}{5}\right\rfloor+2 ; \mathrm{i}=1,2, \ldots, 9$ and $\mathrm{j}=1,2, \ldots, 4$.
Let $\mathcal{D}_{3}=\left\{A_{3,1}, A_{3,2}, \ldots, A_{3,9}, B_{3,1}, B_{3,2}, B_{3,3}, B_{3,4}\right\}$ and $\left|\mathcal{D}_{3}\right|=13=\frac{n^{2}+5 n+2}{2}$, where $\mathrm{n}=3$. Therefore, the result is true for $\mathrm{n}=1,2$ and 3 . Assume that the theorem holds for $\mathrm{n}=\mathrm{k}-1$. That is, there are exactly $\frac{(k-1)^{2}+5(k-1)+2}{2}=\frac{k^{2}+3 k-2}{2}$ minimum co- isolated locating dominating sets of $\mathrm{P}_{5(k-1)+3}$ containing $\mathrm{v}_{1}$ and $\mathrm{v}_{5(k-1)+3}$ with the labellings $\mathrm{v}_{1}, \mathrm{v}_{2}, \mathrm{v}_{3}, \ldots, \mathrm{v}_{5(k-1)+2}$, $\mathrm{v}_{5(\mathrm{k}-1)+3}$. Let $\mathcal{D}_{\mathrm{k}-1}$ be the set of all minimum co - isolated locating dominating sets of $\mathrm{P}_{5(\mathrm{k}-1)+3}$ containing $\mathrm{v}_{1}$ and $\mathrm{V}_{5(\mathrm{k}-1)+3}$.

Then, $\mathcal{D}_{\mathrm{k}-1}=\left\{A_{(\mathrm{k}-1), 1}, A_{(\mathrm{k}-1), 2}, A_{(\mathrm{k}-1), 3}, \ldots, A_{(\mathrm{k}-1) \mathrm{r}}, B_{(\mathrm{k}-1), 1}, B_{(\mathrm{k}-1), 2}, \ldots, B_{(\mathrm{k}-1), \mathrm{s}}\right\}$ where $\mathrm{r}=\frac{(k-1)(k+2)}{2} ; \mathrm{s}=\mathrm{k}, \mathrm{k} \geq 2$.
Also, $\left|\mathcal{D}_{\mathrm{k}-1}\right|=\frac{k^{2}+3 k-2}{2}$ and $\left|A_{(\mathrm{k}-1), \mathrm{i}}\right|=\left|B_{(\mathrm{k}-1), \mathrm{j}}\right|=2\left[\frac{5(k-1)+3}{5}\right]+2, \mathrm{i}=1,2, \ldots, \mathrm{r}$ and $\mathrm{j}=1,2, \ldots$, s. The theorem is to be proved for $\mathrm{n}=\mathrm{k}$. In order to construct the minimum co - isolated locating dominating sets of $\mathrm{P}_{5 \mathrm{k}+3}$ containing $\mathrm{v}_{1}$ and $\mathrm{v}_{5 \mathrm{k}+3}$, the following sets are defined using the sets in $\mathcal{D}_{\mathrm{k}-1}$. Let $\mathcal{D}_{\mathrm{k}}$ be the set of all minimum co - isolated locating dominating sets of $\mathrm{P}_{5 \mathrm{k}+3}$ containing $\mathrm{v}_{1}$ and $\mathrm{v}_{5 \mathrm{k}+3}$.

Then, $\mathcal{D}_{\mathrm{k}}=\left\{A_{\mathrm{k}, 1}, A_{\mathrm{k}, 2}, A_{\mathrm{k}, 3}, \ldots, A_{k, l}, B_{\mathrm{k}, 1}, B_{\mathrm{k}, 2}, . ., B_{\mathrm{k}, \mathrm{m}}\right\}$, where $l=\frac{k(k+3)}{2}$ and $\mathrm{m}=\mathrm{k}+1$.
$\mathrm{A}_{\mathrm{k}, \mathrm{i}}=A_{(k-1), i} \cup\left\{\mathrm{v}_{5 \mathrm{k}}, \mathrm{v}_{5 \mathrm{k}+3}\right\}$, for $\mathrm{i}=1,2, \ldots, \mathrm{r}$;
$\mathrm{A}_{\mathrm{k}, \mathrm{j}}=B_{(k-1),(j-r)} \cup\left\{\mathrm{v}_{5 \mathrm{k}}, \mathrm{v}_{5 \mathrm{k}+3}\right\}$, for $\mathrm{j}=\mathrm{r}+1, \mathrm{r}+2, \ldots, \mathrm{r}+\mathrm{s}(=l)$;
$A_{k,(l+1)}=\left(B_{(\mathrm{k}-1), \mathrm{k}}-\left\{\mathrm{v}_{5 \mathrm{k}-3}\right\}\right) \cup\left\{\mathrm{v}_{5 \mathrm{k}-2}, \mathrm{v}_{5 \mathrm{k}}, \mathrm{v}_{5 \mathrm{k}+3}\right\}$;
$B_{\mathrm{k}, \mathrm{i}}=B_{(k-1), i} \cup\left\{\mathrm{v}_{5 \mathrm{k}+1}, \mathrm{v}_{5 \mathrm{k}+3}\right\} ; \mathrm{i}=1,2, \ldots, \mathrm{k} ;$
$B_{\mathrm{k},(\mathrm{k}+1)}=\left(B_{(\mathrm{k}-1), \mathrm{k}}\left\{\mathrm{v}_{5 \mathrm{k}-3}\right\}\right) \cup\left\{\mathrm{v}_{5 \mathrm{k}-2}, \mathrm{v}_{5 \mathrm{k}+1}, \mathrm{v}_{5 \mathrm{k}+3}\right\}$.
Also, $\left|A_{\mathrm{k}, \mathrm{i}}\right|=\left|B_{\mathrm{k}, \mathrm{j}}\right|=2\left[\frac{5 k+3}{5}\right]+2 ; \mathrm{i}=1,2, \ldots, l ; \mathrm{j}=1,2, \ldots, \mathrm{~m}$ and $\left|\mathcal{D}_{\mathrm{k}}\right|=l+\mathrm{m}=\frac{k^{2}+5 k+2}{2}$. The theorem is proved for $\mathrm{n}=\mathrm{k}$. By induction hypothesis, there are exactly $\frac{n^{2}+5 n+2}{2}$ minimum co - isolated locating dominating sets of $\mathrm{P}_{5 n+3}$ containing $\mathrm{v}_{1}$ and $\mathrm{v}_{5 \mathrm{n}+3}$ with the labellings $\mathrm{v}_{1}, \mathrm{v}_{2}, \mathrm{v}_{3}, \ldots, \mathrm{v}_{5 \mathrm{n}+2}, \mathrm{v}_{5 \mathrm{n}+3}$, for all $\mathrm{n} \geq 2$.

Theorem: 3.13 There are exactly $\frac{n^{2}+21 n-24}{2}$ minimum co - isolated locating dominating sets of $P_{5 n+3}$ containing $\mathrm{v}_{1}$ and $\mathrm{v}_{5 \mathrm{n}+2}$ with the labellings $\mathrm{v}_{1}, \mathrm{v}_{2}, \mathrm{v}_{3}, \ldots, \mathrm{v}_{5 \mathrm{n}+2}, \mathrm{v}_{5 \mathrm{n}+3}$, where $\mathrm{n} \geq 3$.

Proof: Let the labellings of vertices of $P_{5 n+3}$ be $v_{1}, v_{2}, v_{3}, \ldots, v_{5 n+2}, v_{5 n+3}$. The theorem is proved by the method of induction on n .

For $\mathrm{n}=1, A_{1,1}=\left\{\mathrm{v}_{1}, \mathrm{v}_{2}, \mathrm{v}_{5}, \mathrm{v}_{7}\right\} ; A_{1,2}=\left\{\mathrm{v}_{1}, \mathrm{v}_{3}, \mathrm{v}_{5}, \mathrm{v}_{7}\right\} ; A_{1,3}=\left\{\mathrm{v}_{1}, \mathrm{v}_{3}, \mathrm{v}_{6}, \mathrm{v}_{7}\right\}$ are the only minimum co - isolated locating dominating sets of $\mathrm{P}_{8}$ containing $\mathrm{v}_{1}$ and $\mathrm{v}_{7}$, since $\left|A_{1, i}\right|=4=2\left\lfloor\frac{5 n+3}{5}\right\rfloor+2$, by Theorem 2.5.

## S. Muthammai, N. Meenal* / The Number Of Minimum Co - Isolated Locating Dominating Sets Of Paths / IJMA- 6(5), May-2015.

Let $\mathcal{D}_{1}=\left\{A_{1,1}, A_{1,2}, A_{1,3}\right\}$ and $\left|\mathcal{D}_{1}\right|=3$. Let $\mathrm{n}=2$. In order to construct the minimum co - isolated locating dominating sets of $\mathrm{P}_{13}$ containing $\mathrm{v}_{1}$ and $\mathrm{v}_{12}$, the following sets are defined using $\mathcal{D}_{1}$.

Let $A_{2, \mathrm{i}}=A_{1, \mathrm{i}} \cup\left\{\mathrm{v}_{10}, \mathrm{v}_{12}\right\} ; \mathrm{i}=1,2,3$ and

$$
\begin{aligned}
& B_{2,1}=\left(A_{1,2}-\left\{\mathrm{v}_{7}\right\}\right) \cup\left\{\mathrm{v}_{8,} \mathrm{v}_{10}, \mathrm{v}_{12}\right\} ; B_{2,2}=\left(A_{1,3}-\left\{\mathrm{v}_{7}\right\}\right) \cup\left\{\mathrm{v}_{8,} \mathrm{v}_{10}, \mathrm{v}_{12}\right\} ; \\
& B_{2,3}=\left(A_{1,1}-\left\{\mathrm{v}_{2}, \mathrm{v}_{7}\right\}\right) \cup\left\{\mathrm{v}_{4}, \mathrm{v}_{8,}, \mathrm{v}_{10}, \mathrm{v}_{12}\right\} ; B_{2,4}=\left(A_{1,1}-\left\{\mathrm{v}_{2}, \mathrm{v}_{5}, \mathrm{v}_{7}\right\}\right) \cup\left\{\mathrm{v}_{4}, \mathrm{v}_{6}, \mathrm{v}_{8}, \mathrm{v}_{10}, \mathrm{v}_{12}\right\} ; \\
& B_{2,5}=\left(A_{1,2}-\left\{\mathrm{v}_{2}, \mathrm{v}_{5}, \mathrm{v}_{7}\right\}\right) \cup\left\{\mathrm{v}_{4}, \mathrm{v}_{6}, \mathrm{v}_{9}, \mathrm{v}_{10}, \mathrm{v}_{12}\right\} ; B_{2,6}=\left(A_{13}-\left\{\mathrm{v}_{7}\right\}\right) \cup\left\{\mathrm{v}_{6}, \mathrm{v}_{8,} \mathrm{v}_{11}, \mathrm{v}_{12}\right\} ; \\
& B_{2,7}=\left(B_{2,4}-\left\{\mathrm{v}_{10}\right\}\right) \cup\left\{\mathrm{v}_{11}, \mathrm{v}_{12}\right\} \text { and } B_{2,8}=\left(B_{2,5}-\left\{\mathrm{v}_{10}\right\}\right) \cup\left\{\mathrm{v}_{11}, \mathrm{v}_{12}\right\} ;
\end{aligned}
$$

These are the only minimum co - isolated locating dominating sets of $P_{13}$ containing $v_{1}$ and $v_{12}$, since
$\left|A_{2, \mathrm{i}}\right|=\left|B_{2, \mathrm{j}}\right|=6=2\left\lfloor\frac{5 n+3}{5}\right\rfloor+2 ; \mathrm{i}=1,2,3$ and $\mathrm{j}=1,2, \ldots, 8$.
Let $\mathcal{D}_{2}=\left\{A_{2,1}, A_{2,2}, A_{2,3}, B_{2,1}, B_{2,2}, \ldots, B_{2,8}\right\}$ and $\left|\mathcal{D}_{2}\right|=11=\frac{n^{2}+21 n-24}{2}$, where $\mathrm{n}=2$.
Let $n=3$. In order to construct the minimum co - isolated locating dominating set of $P_{18}$ containing $v_{1}$ and $v_{17}$, the following sets are defined using the sets in $\mathcal{D}_{2}$.
$A_{3, \mathrm{i}}=A_{2, i} \cup\left\{\mathrm{v}_{15}, \mathrm{v}_{17}\right\}$, for $\mathrm{i}=1,2,3$;
$A_{3, \mathrm{j}}=B_{2,(j-3)} \cup\left\{\mathrm{v}_{15}, \mathrm{v}_{17}\right\}$, for $\mathrm{j}=4,5, \ldots, 11$;
$B_{3, \mathrm{i}}=B_{2, \mathrm{i}}-\left\{\mathrm{v}_{12}\right\} \cup\left\{\mathrm{v}_{13}, \mathrm{v}_{15}, \mathrm{v}_{17}\right\} ; \mathrm{i}=1,2, \ldots, 8$;
$B_{3, \mathrm{j}}=B_{2, \mathrm{j}-3)^{-}}\left\{\mathrm{v}_{12}\right\} \cup\left\{\mathrm{v}_{13}, \mathrm{v}_{16}, \mathrm{v}_{17}\right\} ; \mathrm{j}=9,10,11$; and $B_{3,12}=\left(B_{2,8}-\left\{\mathrm{v}_{12}\right\}\right) \cup\left\{\mathrm{v}_{14}, \mathrm{v}_{15}, \mathrm{v}_{17}\right\} ;$
$B_{3,13}=\left(B_{2,8}-\left\{\mathrm{v}_{12}\right\}\right) \cup\left\{\mathrm{v}_{14}, \mathrm{v}_{16}, \mathrm{v}_{17}\right\}$.
These are the only minimum co - isolated locating dominating set of $P_{18}$ containing $v_{1}$ and $v_{18}$, since
$\left|A_{3, \mathrm{i}}\right|=\left|B_{3, j}\right|=8=2\left[\frac{5 n+3}{5}\right]+2 ; \mathrm{i}=1,2, \ldots, 11$ and $\mathrm{j}=1,2, \ldots, 13$.
Let $\mathcal{D}_{3}=\left\{A_{3,1}, A_{3,2}, \ldots, A_{3,11}, B_{3,1}, B_{3,2}, \ldots, B_{3,13}\right\}$ and $\left|\mathcal{D}_{3}\right|=24=\frac{n^{2}+21 n-24}{2}$, where $\mathrm{n}=3$.
Let $n=4$. In order to construct the minimum co - isolated locating dominating sets of $P_{21}$ containing $v_{1}$ and $v_{20}$, the following sets are defined using the sets in $\mathcal{D}_{3}$.

Let $A_{4, i}=A_{3, i} \cup\left\{\mathrm{v}_{20}, \mathrm{v}_{22}\right\}$, for $\mathrm{i}=1,2, \ldots, 11$;
$A_{4, \mathrm{j}}=B_{3,(j-11)} \cup\left\{\mathrm{v}_{20}, \mathrm{v}_{22}\right\}$, for $\mathrm{j}=12,13, \ldots, 24$;

$B_{4,1}=\operatorname{SU} B_{3,1} ; B_{4,2}=\operatorname{SU} B_{3,3 ;} B_{4,3}=\operatorname{SU} B_{3,4} ;$
$B_{4,4}=\operatorname{SU} B_{39} ; B_{4,5}=\operatorname{SU} B_{3,10} ; B_{4,6}=\operatorname{SU} B_{3,11 ;} B_{47}=\operatorname{SU} B_{3,12}$;
$B_{4,8}=\left\{\mathrm{v}_{2}, \mathrm{v}_{4}, \mathrm{v}_{7} \mathrm{v}_{8,}, \mathrm{v}_{11}, \mathrm{v}_{14}, \mathrm{v}_{16}, \mathrm{v}_{19}, \mathrm{v}_{20}, \mathrm{v}_{22}\right\}$; and
$B_{4,9}=\left\{\mathrm{v}_{2}, \mathrm{v}_{4}, \mathrm{v}_{7} \mathrm{v}_{8}, \mathrm{v}_{11}, \mathrm{v}_{14}, \mathrm{v}_{16}, \mathrm{v}_{19}, \mathrm{v}_{21}, \mathrm{v}_{22}\right\}$. These are the only minimum co - isolated locating dominating sets of $\mathrm{P}_{23}$ containing $\mathrm{v}_{2}$ and $\mathrm{v}_{22}$, since $\left|A_{4, \mathrm{i}}\right|=\left|B_{4, \mathrm{j}}\right|=10=2\left[\frac{5 n+3}{5}\right\rfloor+2 ; \mathrm{i}=1,2, \ldots, 16$ and $\mathrm{j}=1,2, \ldots, 9$.

Let $\mathcal{D}_{4}=\left\{A_{4,1}, A_{4,2}, \ldots, A_{4,16}, B_{4,1}, B_{4,2}, \ldots, B_{4,9}\right\}$ and $\left|\mathcal{D}_{4}\right|=25=(\mathrm{n}+1)^{2}$. Therefore, the result is true for $\mathrm{n}=4$. Assume that the theorem holds for $\mathrm{n}=\mathrm{k}-1$. Let $\mathcal{D}_{\mathrm{k}-1}$ be the set of all minimum co - isolated locating dominating set of $\mathrm{P}_{5(\mathrm{k}-1)+3}$ containing $\mathrm{v}_{2}$ and $\mathrm{v}_{5(\mathrm{k}-1)+2}$, then $\mathcal{D}_{\mathrm{k}-1}=\left\{A_{(\mathrm{k}-1), 1}, A_{(\mathrm{k}-1), 2}, A_{(\mathrm{k}-1), 3}, \ldots, A_{(\mathrm{k}-1), \mathrm{r}}, B_{(\mathrm{k}-1), 1}, B_{(\mathrm{k}-1), 2}, \ldots, B_{(\mathrm{k}-1), \mathrm{s}}\right\}$, where
$\mathrm{r}=(\mathrm{k}-1)^{2} ; \mathrm{s}=2(\mathrm{k}-1)+1=2 \mathrm{k}-1, \mathrm{k} \geq 5$. Also, $\left|\mathcal{D}_{\mathrm{k}-1}\right|=\mathrm{k}^{2}$ and $\left|A_{(\mathrm{k}-1), \mathrm{i}}\right|=\left|B_{(\mathrm{k}-1), \mathrm{j}}\right|=2\left\lfloor\frac{5(k-1)+3}{5}\right\rfloor+2 ; \mathrm{i}=1,2, \ldots, \mathrm{r}$ and $j=1,2, \ldots$, s. The theorem is to be proved for $n=k$. In order to construct the minimum co - isolated locating dominating set of $\mathrm{P}_{5 \mathrm{k}+3}$ containing $\mathrm{v}_{2}$ and $\mathrm{v}_{5 \mathrm{k}+2}$, the following sets are defined using the sets in $\mathcal{D}_{\mathrm{k}-1}$. Let $\mathcal{D}_{\mathrm{k}}$ be the set of all minimum co - isolated locating dominating sets of $\mathrm{P}_{5 k+3}$ containing $\mathrm{v}_{2}$ and $\mathrm{v}_{5 k+2}$. Then,
$\mathcal{D}_{\mathrm{k}}=\left\{A_{\mathrm{k}, 1}, A_{\mathrm{k}, 2}, A_{\mathrm{k}, 3}, \ldots, A_{k, l}, B_{\mathrm{k}, 1}, B_{\mathrm{k}, 2}, \ldots, B_{\mathrm{k}, \mathrm{m}}\right\}$, where $l=\mathrm{k}^{2}$ and $\mathrm{m}=2 \mathrm{k}+1$.
$A_{\mathrm{k}, \mathrm{i}}=A_{(\mathrm{k}-1), \mathrm{i}} \cup\left\{\mathrm{v}_{5 \mathrm{k},}, \mathrm{v}_{5 \mathrm{k}+2}\right\} ; \mathrm{i}=1,2, \ldots, \mathrm{k}^{2} ;$

The sets $B_{\mathrm{k}, 2 \mathrm{k}}$ and $B_{\mathrm{k}, 2 \mathrm{k}+1}$ are defined as follows.
If n is odd, $B_{\mathrm{k}, 2 \mathrm{k}}=\left\{\mathrm{v}_{2}, \mathrm{v}_{4}, \mathrm{v}_{7} \mathrm{v}_{9}, \mathrm{v}_{12}, \mathrm{v}_{14}, \mathrm{v}_{15}, \mathrm{v}_{17}, \ldots, \mathrm{v}_{5 \mathrm{k},}, \mathrm{v}_{5 \mathrm{k}+2}\right\}$;
$B_{\mathrm{k}, 2 \mathrm{k}+1}=\left\{\mathrm{v}_{2}, \mathrm{v}_{4}, \mathrm{v}_{7} \mathrm{v}_{9}, \mathrm{v}_{12}, \mathrm{v}_{14}, \mathrm{v}_{15}, \mathrm{v}_{17}, \ldots, \mathrm{v}_{5 \mathrm{k}+1}, \mathrm{v}_{5 \mathrm{k}+2}\right\}$.

## S. Muthammai, N. Meenal* / The Number Of Minimum Co - Isolated Locating Dominating Sets Of Paths / IJMA- 6(5), May-2015.

If n is even, $B_{\mathrm{k}, 2 \mathrm{k}}=\left\{\mathrm{v}_{2}, \mathrm{v}_{4}, \mathrm{v}_{7} \mathrm{v}_{8,} \mathrm{v}_{11}, \mathrm{v}_{14}, \mathrm{v}_{16}, \mathrm{v}_{19}, \ldots, \mathrm{v}_{5 \mathrm{k}}, \mathrm{v}_{5 \mathrm{k}+2}\right\}$;
$B_{k, 2 k+1}=\left\{\mathrm{v}_{2}, \mathrm{v}_{4}, \mathrm{v}_{7} \mathrm{v}_{8,} \mathrm{v}_{11}, \mathrm{v}_{14}, \mathrm{v}_{16}, \mathrm{v}_{19}, \ldots, \mathrm{v}_{5 \mathrm{k}+1}, \mathrm{v}_{5 \mathrm{k}+2}\right\}$.
Also, $\left|A_{\mathrm{k}, \mathrm{i}}\right|=\left|B_{\mathrm{k}, \mathrm{j}}\right|=2\left[\frac{5 k+3}{5}\right]+2 ; \mathrm{i}=1,2, \ldots, l ; \mathrm{j}=1,2, \ldots, \mathrm{~m}$ and $\left|\mathcal{D}_{\mathrm{k}}\right|=l+\mathrm{m}=(\mathrm{k}+1)^{2}$. Therefore, there are exactly $(k+1)^{2}$ minimum co - isolated locating dominating sets of $P_{5 k+3}$ containing $v_{2}$ and $v_{5 k+2}$ with the labellings $v_{1}, v_{2}, v_{3}$, $\ldots, v_{5 k+2}, v_{5 k+3}$, where $k \geq 4$. By induction hypothesis, the result is true for $n \geq 4$. Also, for $n=3$, the number of minimum co-isolated locating dominating sets of $\mathrm{P}_{18}$ is 16 .

Theorem: 3.15 For any integer $n \geq 4, \gamma_{\text {Dcild }}\left(P_{5 n+3}\right)=\frac{5 n^{2}+51 n-44}{2}$.
Proof: $\gamma_{\text {Dcild }}\left(\mathrm{P}_{5 \mathrm{n}+3}\right)$ is the sum of the number of minimum co - isolated locating dominating sets of $\mathrm{P}_{5 \mathrm{n}+3}$ containing
(i) $v_{1}$ and $v_{5 n+3}$
(ii) $v_{1}$ and $v_{5 n+2}$
(iii) $v_{2}$ and $v_{5 n+3}$
(iv) $v_{2}$ and $v_{5 n+2}$
(a) For (i), the number number of minimum co - isolated locating dominating sets of $P_{5 n+3}$ containing $v_{1}$ and $v_{5 n+3}$ is $\frac{n^{2}+5 n+2}{2}$, by Theorem 3.12.
(b) For (ii), the number of minimum co - isolated locating dominating sets of $P_{5 n+3}$ containing $v_{1}$ and $v_{5 n+2}$ is $\frac{n^{2}+21 n-24}{2}$, by Theorem 3.13.
(c) For (iii), the number of minimum co - isolated locating dominating sets of $P_{5 n+3}$ containing $v_{2}$ and $v_{5 n+3}$ is the same as the number $\frac{n^{2}+21 n-24}{2}$.
(d) For (iv), the number of minimum co - isolated locating dominating sets of $P_{5 n+3}$ containing $v_{2}$ and $v_{5 n+2}$ is $(\mathrm{n}+1)^{2}$, by Theorem 3.14.

Therefore, $\gamma_{\text {Dcild }}\left(\mathrm{P}_{5 n+3}\right)=\frac{\left(5 n^{2}+51 n-44\right)}{2}$.
Remark: 3.16 The Recurrence relation is given by
$\begin{aligned} \gamma_{\text {Dcild }}\left(\mathrm{P}_{5 n+3}\right)-\gamma_{\text {Dcild }}\left(\mathrm{P}_{5(n-1)+3}\right) & =\frac{\left(5 n^{2}+51 n-44\right)}{2}-\frac{\left(5 n^{2}+41 n-90\right)}{2} . \\ & =5 n+23 .\end{aligned}$
Therefore, $\gamma_{\text {Dcild }}\left(\mathrm{P}_{5 n+3}\right)=\gamma_{\text {Dcild }}\left(\mathrm{P}_{5 n-2}\right)+5 n+23$; $\mathrm{n} \geq 4$.
In the following, the number of minimum co-isolated locating dominating sets of $\mathrm{P}_{5 n+4}$ is found.
Theorem: 3.17 There is exactly one minimum co - isolated locating dominating set of $\mathrm{P}_{5 \mathrm{n}+4}$ containing $\mathrm{v}_{1}$ and $\mathrm{v}_{5 n+4}$ with the labellings $\mathrm{v}_{1}, \mathrm{v}_{2}, \mathrm{v}_{3}, \ldots ., \mathrm{v}_{5 n+2}, \mathrm{v}_{5 \mathrm{n}+3}, \mathrm{v}_{5 \mathrm{n}+4}$, where $\mathrm{n} \geq 1$.

Proof: Clearly, $D=\left\{v_{1}, v_{4}, v_{6}, v_{9}, \ldots, v_{5 n+1}, v_{5 n+4}\right\}$ is a minimum co - isolated locating dominating set of $P_{5 n+4}$ containing $\mathrm{v}_{1}$ and $\mathrm{v}_{5 \mathrm{n}+4}$, which proves the existence. To prove the uniqueness, let $D^{\prime}=\mathrm{D}-\left\{\mathrm{v}_{5 \mathrm{n}+4}\right\}$. $D^{\prime}$ is a minimum co isolated locating dominating set of $\mathrm{P}_{5 n+1}$ with the labellings $\mathrm{v}_{1}, \mathrm{v}_{2}, \mathrm{v}_{3}, \ldots, \mathrm{v}_{5 \mathrm{n}+1}, \mathrm{v}_{5 \mathrm{n}+2}$ containing $\mathrm{v}_{1}$ and $\mathrm{v}_{5 n+1}$, since, $\left|D^{\prime}\right|$ $=2 n+1=\gamma_{\text {cild }}\left(\mathrm{P}_{5 n+2}\right)$. But by Theorem 3.9, $D^{\prime}$ is the unique minimum co - isolated locating dominating set of $\mathrm{P}_{5 n+2}$ and hence D is unique.

Theorem: 3.18 There are exactly $n+1$ minimum co - isolated locating dominating sets of $P_{5 n+4}$ containing $v_{2}$ and $v_{5 n+4}$ with the labellings $\mathrm{v}_{1}, \mathrm{v}_{2}, \mathrm{v}_{3}, \ldots ., \mathrm{v}_{5 \mathrm{n}+2}, \mathrm{v}_{5 \mathrm{n}+3}, \mathrm{v}_{5 \mathrm{n}+4}$ and $\mathrm{n} \geq 0$.

Proof: Let the labellings of vertices of $P_{5 n+4}$ be $v_{1}, v_{2}, v_{3}, \ldots, v_{5 n+2}, v_{5 n+3}, v_{5 n+4}$. The theorem is proved by the method of induction on $n$. For $n=0,\left\{v_{2}, v_{4}\right\}$ is the only minimum co - isolated locating dominating set of $P_{4}$ containing $v_{2}$ and $v_{4}$.

For $\mathrm{n}=1,\left\{\mathrm{v}_{2}, \mathrm{v}_{4}, \mathrm{v}_{6}, \mathrm{v}_{9}\right\}$ and $\left\{\mathrm{v}_{2}, \mathrm{v}_{4}, \mathrm{v}_{7}, \mathrm{v}_{9}\right\}$ are the only minimum co - isolated locating dominating sets of $\mathrm{P}_{9}$ containing $\mathrm{v}_{2}$ and $\mathrm{v}_{\mathrm{g}}$.

Assume that the theorem holds for $\mathrm{n}=\mathrm{k}-1$. That is, there are exactly k minimum co - isolated locating dominating sets of $P_{5(k-1)+4}$ containing $v_{2}$ and $v_{5(k-1)+4}$ with the labellings $v_{1}, v_{2}, v_{3}, \ldots, v_{5(k-1)+2}, v_{5(k-1)+3}, v_{5(k-1)+4}$. Let the $k$ sets be $D_{i}$, $\mathrm{i}=1,2, \ldots, \mathrm{k}$ and $\left|\mathrm{D}_{\mathrm{i}}\right|=2\left[\frac{5(k-1)+4}{5}\right\rfloor+2$, by Theorem 2.5.

Assume $\mathrm{n}=\mathrm{k}$. Let $\mathrm{D}_{\mathrm{i}}^{\prime}=\mathrm{D}_{\mathrm{i}} \cup\left\{\mathrm{v}_{5 \mathrm{i}+1}, \mathrm{v}_{5 \mathrm{i}+4}\right\} ; \mathrm{i}=1,2,3 \ldots \mathrm{k}$.

## S. Muthammai, N. Meenal* / The Number Of Minimum Co - Isolated Locating Dominating Sets Of Paths / IJMA- 6(5), May-2015.

Since, $\left|D_{\mathrm{i}}^{\prime}\right|=\left|\mathrm{D}_{\mathrm{i}}\right|+2=2\left\lfloor\frac{5(k-1)+4}{5}\right\rfloor+2+2=2\left\lfloor\frac{5 k+4}{5}\right\rfloor+2 ; \quad \mathrm{D}_{\mathrm{i}}^{\prime}$ are the minimum co - isolated locating dominating set of $P_{5 k+4}, i=1,2, \ldots, k$.

In addition, $\mathrm{D}=\left\{\mathrm{v}_{2}, \mathrm{v}_{4}, \mathrm{v}_{7}, \mathrm{v}_{9}, \ldots, \mathrm{v}_{5 \mathrm{k}+2}, \mathrm{v}_{5 \mathrm{k}+4}\right\}$ is also a minimum co - isolated locating dominating set of $\mathrm{P}_{5 \mathrm{k}+4}$ since, $|\mathrm{D}|=2\left\lfloor\frac{5 k+4}{5}\right\rfloor+2$, which is different from $\mathrm{D}_{\mathrm{i}}{ }^{\prime}$ for each i . Therefore, there are $\mathrm{k}+1$ minimum co - isolated locating dominating sets of $\mathrm{P}_{5 \mathrm{k}+4}$ containing $\mathrm{v}_{2}$ and $\mathrm{v}_{5 \mathrm{k}+4}$. Therefore, the theorem is proved for $\mathrm{n}=\mathrm{k}$. By induction hypothesis, there are exactly $n+1$ minimum co - isolated locating dominating sets of $P_{5 n+4}$ containing $\mathrm{V}_{2}$ and $\mathrm{v}_{5 \mathrm{n}+4}$ with the labellings $\mathrm{v}_{1}, \mathrm{v}_{2}, \mathrm{v}_{3}, \ldots, \mathrm{v}_{5 n+2}, \mathrm{v}_{5 \mathrm{n}+3}, \mathrm{v}_{5 \mathrm{n}+4}$ and $\mathrm{n} \geq 0$.

Theorem: 3.19 There are exactly $\frac{(n+1)(n+2)}{2}$ minimum co - isolated locating dominating sets of $\mathrm{P}_{5 n+4}$ containing $\mathrm{v}_{2}$ and $v_{5 n+3}$ with the labellings $v_{1}, v_{2}, v_{3}, \ldots, v_{5 n+2}, v_{5 n+3}, v_{5 n+4}$, where $n \geq 1$.

Proof: Let the labellings of vertices of $P_{5 n+4}$ be $v_{1}, v_{2}, v_{3}, \ldots, v_{5 n+2}, v_{5 n+3}, v_{5 n+4}$. The theorem is proved by the method of induction on n . For $\mathrm{n}=1, A_{1,1}=\left\{\mathrm{v}_{2}, \mathrm{v}_{3}, \mathrm{v}_{6}, \mathrm{v}_{8}\right\} ; A_{1,2}=\left\{\mathrm{v}_{2}, \mathrm{v}_{4}, \mathrm{v}_{6}, \mathrm{v}_{8}\right\} ; A_{1,3}=\left\{\mathrm{v}_{2}, \mathrm{v}_{4}, \mathrm{v}_{7}, \mathrm{v}_{8}\right\}$ are the only minimum co isolated locating dominating sets of $\mathrm{P}_{9}$ containing $\mathrm{v}_{2}$ and $\mathrm{v}_{8}$, since, $\left|A_{1, \mathrm{i}}\right|=4=2\left\lfloor\frac{5 n+4}{5}\right\rfloor+2$. Let $\mathcal{D}_{1}=\left\{A_{1,1}, A_{1,2}, A_{1,3}\right\}$ and $\left|\mathcal{D}_{1}\right|=3=\frac{(n+1)(n+2)}{2}$.

Let $\mathrm{n}=2$. In order to construct the minimum co - isolated locating dominating sets of $\mathrm{P}_{14}$ containing $\mathrm{v}_{2}$ and $\mathrm{v}_{13}$, the following sets are defined using $\mathcal{D}_{1}$.

Let $A_{2, \mathrm{i}}=A_{1, \mathrm{i}} \cup\left\{\mathrm{v}_{11}, \mathrm{v}_{13}\right\} ; \mathrm{i}=1,2,3$ and
$B_{2,1}=\left(A_{1,2}-\left\{\mathrm{v}_{8}\right\}\right) \cup\left\{\mathrm{v}_{\mathrm{g},} \mathrm{v}_{11}, \mathrm{v}_{13}\right\} ; B_{2,2}=\left(A_{1,3}-\left\{\mathrm{v}_{8}\right\}\right) \cup\left\{\mathrm{v}_{9}, \mathrm{v}_{11}, \mathrm{v}_{13}\right\}$ and
$B_{2,3}=\left(A_{1,3}-\left\{\mathrm{v}_{8}\right\}\right) \cup\left\{\mathrm{v}_{9}, \mathrm{v}_{12}, \mathrm{v}_{13}\right\}$.
These are the only minimum co - isolated locating dominating sets of $\mathrm{P}_{14}$ containing $\mathrm{v}_{2}$ and $\mathrm{v}_{13}$, since,
$\left|A_{2, i}\right|=\left|B_{2, i}\right|=6=2\left[\frac{5 n+4}{5}\right\rfloor+2$.
Let $\mathcal{D}_{2}=\left\{A_{2,1}, A_{2,2}, A_{2,3}, B_{2,1}, B_{2,2}, B_{2,3}\right\}$ and $\left|\mathcal{D}_{2}\right|=6=\frac{(n+1)(n+2)}{2}$.
Let $\mathrm{n}=3$. To construct the minimum co - isolated locating dominating sets of $\mathrm{P}_{16}$ containing $\mathrm{v}_{2}$ and $\mathrm{v}_{16}$ the following sets are defined using the sets in $\mathcal{D}_{2}$.
$A_{3, \mathrm{i}}=A_{2, i} \cup\left\{\mathrm{v}_{16}, \mathrm{v}_{18}\right\}, \mathrm{i}=1,2,3$;
$A_{3, \mathrm{j}}=B_{2,(j-3)} \cup\left\{\mathrm{v}_{16}, \mathrm{v}_{18}\right\}, \mathrm{j}=4,5,6$;
$B_{3, \mathrm{i}}=\left(B_{2, \mathrm{i}}-\left\{\mathrm{v}_{13}\right\}\right) \cup\left\{\mathrm{v}_{14,}, \mathrm{v}_{16}, \mathrm{v}_{18}\right\} ; \mathrm{i}=1,2,3$; and
$B_{3,4}=\left(B_{2,3}-\left\{\mathrm{v}_{13}\right\}\right) \cup\left\{\mathrm{v}_{14}, \mathrm{v}_{17}, \mathrm{v}_{18}\right\}$.
These are the only minimum co - isolated locating dominating set of $\mathrm{P}_{19}$ containing $\mathrm{v}_{2}$ and $\mathrm{v}_{18}$, since
$\left|A_{3, \mathrm{i}}\right|=\left|B_{3, \mathrm{j}}\right|=8=2\left[\frac{5 n+4}{5}\right\rfloor+2 ; \mathrm{i}=1,2, \ldots, 6$ and $\mathrm{j}=1,2,3,4$.
Let $\mathcal{D}_{3}=\left\{A_{3,1}, A_{3,2}, \ldots, A_{3,6}, B_{3,1}, B_{3,2}, B_{3,3}, B_{3,4}\right\}$ and $\left|\mathcal{D}_{3}\right|=10=\frac{(n+1)(n+2)}{2}$, when $\mathrm{n}=3$. Therefore, the result is true for $\mathrm{n}=1,2$ and 3 .

Assume that the theorem holds for $\mathrm{n}=\mathrm{k}-1$. That is, for all paths having $5(\mathrm{k}-1)+4$ vertices. Let $\mathcal{D}_{\mathrm{k}-1}$ be the set of all minimum co - isolated locating dominating sets of $\mathrm{P}_{5(\mathrm{k}-1)+2}$ containing $\mathrm{v}_{2}$ and $\mathrm{v}_{5(\mathrm{k}-1)+1}$.
Then, $\mathcal{D}_{\mathrm{k}-1}=\left\{A_{(\mathrm{k}-1), 1}, A_{(\mathrm{k}-1), 2}, A_{(\mathrm{k}-1), 3}, \ldots, A_{(\mathrm{k}-1), \mathrm{r}}, B_{(\mathrm{k}-1), 1}, B_{(\mathrm{k}-1), 2}, \ldots, B_{(\mathrm{k}-1), \mathrm{s}}\right\}$, where $\mathrm{r}=\frac{(n-1) n}{2} ; \mathrm{s}=\mathrm{k}, \mathrm{k} \geq 3$. Also $\left|\mathcal{D}_{\mathrm{k}-1}\right|=\frac{k(k+1)}{2}$ and $\left|A_{(\mathrm{k}-1), \mathrm{i}}\right|=\left|B_{(\mathrm{k}-1), \mathrm{j}}\right|=2\left[\frac{5(k-1)+4}{5}\right]+2 ; \mathrm{i}=1,2, \ldots, \mathrm{r}$ and $\mathrm{j}=1,2, \ldots$, s. Let $\mathrm{n}=\mathrm{k}$. In order to construct the minimum co - isolated locating dominating sets of $\mathrm{P}_{5 \mathrm{k}+4}$ containing $\mathrm{v}_{2}$ and $\mathrm{v}_{5 \mathrm{k}+3}$, the following sets are defined using the sets in $\mathcal{D}_{k-1}$. Let $\mathcal{D}_{k}$ be the set of all minimum co - isolated locating dominating set of $\mathrm{P}_{5 \mathrm{k}+4}$ containing $\mathrm{v}_{2}$ and $\mathrm{v}_{5 \mathrm{k}+3}$.

Then, $\mathcal{D}_{\mathrm{k}}=\left\{A_{\mathrm{k}, 1}, A_{\mathrm{k}, 2}, A_{\mathrm{k}, 3}, \ldots, A_{k, l}, B_{\mathrm{k}, 1}, B_{\mathrm{k}, 2}, \ldots, B_{\mathrm{k}, \mathrm{m}}\right\}$, where $l=\frac{k(k+1)}{2}$ and $\mathrm{m}=\mathrm{k}+1$.
$A_{\mathrm{k}, \mathrm{i}}=A_{(k-1), i} \cup\left\{\mathrm{v}_{5 \mathrm{k}+1}, \mathrm{v}_{5 \mathrm{k}+3}\right\}, ;$ for $\mathrm{i}=1,2, \ldots, \mathrm{r}$;
$A_{\mathrm{k}, \mathrm{j}}=B_{(k-1),(j-r)} \cup\left\{\mathrm{v}_{5 \mathrm{k}+1}, \mathrm{v}_{5 \mathrm{k}+3}\right\}$, for $\mathrm{j}=\mathrm{r}+1, \mathrm{r}+2, \ldots, \mathrm{r}+\mathrm{s}(=l)$;
$B_{\mathrm{k}, \mathrm{i}}=\left(B_{(\mathrm{k}-1), \mathrm{i}}-\left\{\mathrm{v}_{5 \mathrm{k}-2}\right\}\right) \cup\left\{\mathrm{v}_{5 \mathrm{k}-1}, \mathrm{v}_{5 \mathrm{k}+1}, \mathrm{v}_{5 \mathrm{k}+3}\right\}, \mathrm{i}=1,2, \ldots, \mathrm{~s}$; and
$B_{\mathrm{k},(\mathrm{k}+1)}=\left(B_{(\mathrm{k}-1), \mathrm{k}}-\left\{\mathrm{v}_{5 \mathrm{k}-2}\right\}\right) \cup\left\{\mathrm{v}_{5 \mathrm{k}-1}, \mathrm{v}_{5 \mathrm{k}+2}, \mathrm{v}_{5 \mathrm{k}+3}\right\}$.

Also, $\left|A_{\mathrm{k}, \mathrm{i}}\right|=\left|B_{\mathrm{k}, \mathrm{j}}\right|=2\left\lfloor\frac{5 k+4}{5}\right\rfloor+2 ; \mathrm{i}=1,2, \ldots, l ; \mathrm{j}=1,2, \ldots, \mathrm{~m}$ and $\left|\mathcal{D}_{\mathrm{k}}\right|=l+\mathrm{m}=\frac{(k+1)(k+2)}{2}$. Hence, the Theorem is proved for $\mathrm{n}=\mathrm{k}$. By induction hypothesis, there are exactly $\frac{(n+1)(n+2)}{2}$ minimum co - isolated locating dominating sets of $P_{5 n+4}$ containing $v_{2}$ and $v_{5 n+3}$ with the labellings $v_{1}, v_{2}, v_{3}, \ldots, v_{5 n+2}, v_{5 n+3}, v_{5 n+4}$, for all $n \geq 1$.

Theorem: 3.20 For any integer $n \geq 1, \gamma_{\text {Dcild }}\left(P_{5 n+4}\right)=\frac{\left(n^{2}+7 n+8\right)}{2}$.
Proof: $\gamma_{\text {Dcild }}\left(\mathrm{P}_{5 n+4}\right)$ is the sum of the number of minimum co - isolated locating dominating sets of $\mathrm{P}_{5 \mathrm{n}+4}$ containing
(i) $v_{1}$ and $v_{5 n+4}$
(ii) $v_{1}$ and $v_{5 n+3}$
(iii) $v_{2}$ and $v_{5 n+4}$
(iv) $\mathrm{v}_{2}$ and $\mathrm{v}_{5 \mathrm{n}+3}$
(a). For (i), the number number of minimum co - isolated locating dominating sets of $P_{5 n+4}$ containing $v_{1}$ and $\mathrm{v}_{5 \mathrm{n}+4}$ is 1 , by Theorem 3.17.
(b). For (ii), the number of minimum co - isolated locating dominating sets of $P_{5 n+4}$ containing $v_{1}$ and $v_{5 n+3}$ is ( $\mathrm{n}+1$ ), by Theorem 3.18.
(c). For (iii), the number of minimum co - isolated locating dominating sets of $P_{5 n+4}$ containing $v_{2}$ and $v_{5 n+4}$ is the same as the number $(n+1)$
(d). For (iv), the number of minimum co - isolated locating dominating sets of $P_{5 n+4}$ containing $v_{2}$ and $v_{5 n+3}$ is $\frac{(n+1)(n+2)}{2}$, by Theorem 3.19.

Hence, $\gamma_{\text {Dcild }}\left(\mathrm{P}_{5 n+4}\right)=\frac{\left(n^{2}+7 n+8\right)}{2}$.
Remark 3.21: The Recurrence relation is given by
$\begin{aligned} \gamma_{\text {Dcild }}\left(\mathrm{P}_{5 n+4}\right)-\gamma_{\text {Dcild }}\left(\mathrm{P}_{5(n-1)+4}\right) & =\frac{\left(n^{2}+7 n+8\right)}{2}-\frac{\left(n^{2}+5 n+2\right)}{2} . \\ & =n+3 .\end{aligned}$
Therefore, $\gamma_{\text {Dcild }}\left(\mathrm{P}_{5 n+4}\right)=\gamma_{\text {Dcild }}\left(\mathrm{P}_{5 \mathrm{n}-1}\right)+\mathrm{n}+3$.

## 4. CONCLUSION

In this paper, the number $\gamma_{\text {Dcild }}$ is obtained for paths $P_{n}, n \geq 4$ are studied.
